- and its derivatives** (JACOBS), i, 948.
- Hederagenolic acid, and its sodium salt** (VAN DER HAAR), i, 946.
- Hederagenone** (VAN DER HAAR), i, 946.
- Hederagenonic acid, and its salts and derivatives** (VAN DER HAAR), i, 947.
- Helianthin. See Methyl orange.**
- Helianthus annuus, anthocyanins in** (SANDO), i, 1026.
- green pigment of** (OPARIN), i, 1517.
- Helianthrone. See meso-Benzdianthrone.**
- Helicin, hydrolysis of** (JOSEPHSON), i, 1359.
- Helicorubin, and its relation to haemoglobin** (ANSON and MIRSKY), i, 1476.
- Helium in petroleum gases** (CLAY), ii, 1195.
- in vacuum tubes** (RIDING and BALY), ii, 925.
- atom, and molecule models of** (ALLEN), ii, 349.
- spectrum of** (ORNSTEIN and BURGER), ii, 4; (BRUNETTI), ii, 249; (FOSTER), ii, 1099.
- band spectrum of** (CURTIS and LONG), ii, 722; (MERTON and PILLEY), ii, 1024.
- structure of lines in spectrum of** (HAM; GEHRCKE), ii, 1098.
- Stark effect in** (FOSTER), ii, 831.
- Zeeman effect in** (CURTIS and JEVONS), ii, 1103.
- impacts of electrons in** (GLOCKLER; DYMOND), ii, 617.
- mobility of positive ions in** (WAHLIN), ii, 170.

- Helium**, atomic field of (JONES), ii, 253.  
 life of metastable atoms of (KANNENSTINE; DEMPSTER), ii, 171.  
 rectilinear diameter of (MATHIAS, CROMMELIN, ONNES, and SWALLOW), ii, 468.  
 density of (BAXTER and STARK-WEATHER), ii, 1045.  
 liquefaction of (MEISSNER), ii, 1135.  
 liquid, dielectric constant of (WOLFE and ONNES), ii, 631.  
     experiments with (WOLTJER and ONNES), ii, 1038.  
 isotherms of (HOLBORN and OTTO), ii, 851.  
 diffusion of, through crystalline septa (PIUTTI and BOGGIO-LERA), ii, 500.  
     through glass (VAN VOORHIS), ii, 1143.  
 viscosity of (GÜNTHER), ii, 100.  
 metastable (ECKART), ii, 1104.  
 chemical activity of (BOOMER), ii, 925.  
     compounds of (BOOMER), ii, 144.  
     combination of mercury and (MANLEY), ii, 57; (LIND and BARDWELL), ii, 1181.
- Hemicellulose**, electrolysis of colloidal solutions of (LENOBLE), i, 793.
- Hemicelluloses** (PRINGSHEIM and GENIN), i, 214.
- Hemipyrocyanine**, and its derivatives (WREDE and STRACK), i, 174.
- Hemp-seed**, vitamin-*E* in (SURE), i, 212.
- Hens**, digestion in (MANGOLD), i, 615.  
     chemistry of the oviduct of (BUCKNER, MARTIN, and PETER), i, 1347.  
     laying, calcium metabolism in (BUCKNER, MARTIN, and PETER), i, 190.  
     eggs. See Eggs.
- Heparin**, purification of, and its presence in blood (HOWELL), i, 1346.
- n*-Heptadecane**, 1-amino-2-hydroxy-, synthesis of (LEVENE and HALLER), i, 890.
- Heptadeca-oxyethylene** diacetate (STAUDINGER and LÜTHY), i, 361.
- Heptadecylcarbamide**,  $\beta$ -hydroxy- (LEVENE and HALLER), i, 890.
- Heptaethyl- $\beta$ -ethylcellobioside** (HESS and SALZMANN), i, 1383.
- Heptamethyl- $\beta$ -benzylcellobioside** (HESS and SALZMANN), i, 1383.
- $\alpha\alpha'$ -Heptamethylenediaminodisobutyric acid**, and its derivatives (SCHLESINGER), i, 1250.
- $\alpha\alpha'$ -Heptamethylenediaminodiphenyldiacetic acid**, and its derivatives (SCHLESINGER), i, 1250.
- Heptanaphthene**, action of aluminium chloride on (ZELINSKI and SMIRNOV), i, 1125.
- Heptane**,  $\delta$ -amino-, oxalate (MAZOUREVITCH), i, 1241.  
      $\gamma\delta$ -dichloro- (BOURGUEL), i, 770.  
**Heptanediols**, and their di-*p*-nitrobenzoates (PIERCE and ADAMS), i, 824.
- cycloHeptanespiro-1-methoxycyclopropane-1:2-dicarboxylic acid**, and its derivatives (BAKER), i, 1277.
- Heptane- $\beta\gamma\delta$ -triol** (DELABY and MOREL), i, 773.
- Heptan-8-one**,  $\delta$ -hydroxy- (GRIGNARD and DUBIEN), i, 111.
- Hepta-oxyethylene diacetate** (STAUDINGER and LÜTHY), i, 361.
- $\Delta\gamma$ -Heptene** (BOURGUEL), i, 770.
- $\Delta\gamma$ -Hepten-8-one**, action of organo-magnesium compounds on (GRIGNARD and DUBIEN), i, 111.
- $\Delta\gamma$ -Heptinene** (BOURGUEL), i, 364.
- Heptodilactone** (BENNETT), i, 883.
- 2-*n*-Heptylcyclotelluripentane-3:5-dione**, 1:1-dichloride (MORGAN and TAYLOR), i, 634.
- 2-*n*-Heptylcyclotelluropentane-3:5-dione** (MORGAN and TAYLOR), i, 634.
- Hesperidine**, occurrence of, in plants (OESTERLE and WANDER), i, 1433.
- Heterocyclic compounds** (SEKA), i, 57, 1293.  
     tautomerism of (HELLER, BUCHWALDT, FUCHS, KLEINICKE, and KLOS), i, 1323.  
     decomposition of (PETRENKO-KRITSCHENKO and BUTMI DE KAZMAN), i, 1094.  
     nuclear hydrogenation of, with colloidal platinum (SKITA), i, 140.
- Heterositostanone**, and its derivatives (WINDAUS and BRUNKEN), i, 394.
- Hevea***, constituents of latex of (SPOON), i, 621; (GORTER), i, 622.
- Hevea brasiliensis***, hydrogen-ion concentration in latex of (BOHILIOV), i, 622.  
     quebrachitol in latex of (CONTARDI), i, 277.  
     tannin from (ARISZ and SCHWEIZER), i, 873.
- Hexachlororuthenic acid**. See under Ruthenium.
- Hexadecahydrodecaacyclene** (DZIEWONSKI and SUSZKO), i, 242.
- Hexadecane**, pyrogenic dissociation of (GAULT and HESSEL), i, 109.
- Hexadecanedicarboxylic acid**, ethyl hydrogen ester (FAIRWEATHER), i, 1237.
- Hexadecene**. See Cetene.
- Hexahydrobenzoic acid**, phenyl ester (BLICK), i, 662.

- Hexahydrocadalene**, synthesis of (Ruzicka and Capato), i, 943.
- Hexahydrodecaacyclene** (Dziewoński and Suszko), i, 242.
- Hexahydromandelic acid**, and its derivatives, methyl esters of (Freudenberg and Markert), i, 1275.  
alkyl esters, rotatory dispersion of (Wood and Comley), ii, 264.
- Hexahydromethylmorphimethines**, and their derivatives (Speyer and Kullen), i, 61.
- $\alpha$ - and  $\beta$ -**Hexahydrotrianhydrostrophanthidins** (Jacobs and Collins), i, 567.
- Hexacosihydrodecaacyclene** (Dziewoński and Suszko), i, 242.
- Hexametaphosphates**. See under Phosphorus.
- Hexamethylbenzene**, formation of (Briner, Plüss, and Paillard), i, 248.
- Hexamethyldiethyltristannane** (Kraus and Greer), i, 1394.
- Hexamethyldipyridyl-blue iodide** (Emmert, Jungk, and Haffner), i, 72.
- 2:2':3:3':5:5'-Hexamethyl-4:4'-dipyrrylmethane** (Fischer and Nenitzescu), i, 835.
- Hexamethylenetetramine** (*hexamethylenecamine*; *urotropine*) as a plant nutrient (E. and G. Nicolas), i, 623.  
as source of plant nitrogen (Bialosuknia), i, 1366.  
fate of, in the body (De Ede), i, 461.  
hydroferricyanide (Cumming), i, 122.  
additive compounds of stannic iodide and (Scagliarini), i, 890.
- Hexamethylguanidinium salts** (Lecher, Graf, and Gnädinger), i, 1393.
- Hexamethylrotlerin**, and its derivatives (Dutt), i, 1296.
- Hexamethyltristannane**, disodium derivative (Kraus and Greer), i, 1394.
- Hexaminecobaltic triaquaodisulphito-sulphatocobaltate**. See under Cobalt.
- n-Hexane**, solubility of mixtures of liquid sulphur dioxide and (Seyer and Gill), ii, 504.
- cycloHexane**, structure of, and benzene (Ramanathan), i, 1255.  
physical constants of (Nagornov and Rotinjan), ii, 646.
- cycloHexane series**, physico-chemical properties of derivatives of (Herz and Bloch), ii, 98.
- cycloHexane-1-acetic acid**, 1:2-dibromo-, ethyl ester (Baker), i, 916.
- cycloHexane-1-acetic-2-propionic acid**, and its dianhydride (Hückel and Götze), i, 402.
- cycloHexane-1:2-diacetic acid**, 1:2-dihydroxy-, lactone (Baker), i, 916.
- cycloHexane-1:3-dicarboxylic acids**, isomeric, and their optically active components (Böseken and Peek), i, 1150.
- $\beta$ -cycloHexaneglutarylfluorescein** (Dutt and Thorpe), i, 141.
- $\beta$ -cycloHexaneglutaryl rhodamine** (Dutt and Thorpe), i, 142.
- $\alpha$ -cycloHexanesuccinylfluorescein** (Dutt and Thorpe), i, 141.
- $\alpha$ -cycloHexanesuccinyl rhodamine** (Dutt and Thorpe), i, 142.
- cycloHexanesulphonic acid**, salts and derivatives of (Kolker and Lapworth), i, 353.
- cycloHexanol**, surface tension and vapour pressure of, and its mixtures (Weissenberger and Schuster), ii, 648.
- cycloHexanol**, 1-amino-2-cyano- (v. Auwers, Bahr, and Frese), i, 312.
- 1-cycloHexanol-2-malonie acid**, ethyl ester lactone (Kötz and Hoffmann), i, 911.
- cycloHexanone** 2-phenylsemicarbazone (Goodwin and Bailey), i, 318.  
derivatives of (Garland and Reid), i, 1280.
- cycloHexanones**, cyano-, and their derivatives (v. Auwers, Bahr, and Frese), i, 310.
- 2:6-dibromo-**, action of alkalis on (Cusmano), i, 818.
- cycloHexanoxide**, sodium (Cauquil), i, 657.
- d-Hexan- $\alpha$ - $\epsilon$ -tetrol**. See Tetrahydro- $\psi$ -glucal.
- Hexaphenyldigermene** (Morgan and Drew), i, 1197.
- cycloHexene**, catalytic hydrogenation of (Zelinski), i, 237.  
nitrates of (Haines and Adkins), i, 801.
- $\Delta^1$ -cycloHexene**, 2-amino-1-cyano-, and its hydrochloride (v. Auwers, Bahr, and Frese), i, 312.
- cycloHexenes**, catalytic decomposition of (Zelinski), i, 122.
- $\Delta^1$ -cycloHexeneacetic acid**, 2-bromo-, ethyl ester (Baker), i, 916.
- $\Delta^1$ -cycloHexene-1-acetic-2-malonie acid**, and its ethyl ester (Baker), i, 916.
- $\Delta^1$ -cycloHexene-1:2-diacetic acid** (Baker), i, 917.
- $\Delta^1$ -cycloHexene-4:5-dione**, 1:2:3:3:6:6-hexachloro-, and its hydrates (Eller and Lorenz), i, 537.
- cycloHexenols**, preparation and derivatives of (Senderens), i, 537.
- n-Hexoic acid**, 3-hydroxybenzaldehyde 2-mercuric ester (Wellcome Foundation, Ltd., Henry, and Sharp), i, 1154.

- Hexoic acid**,  $\epsilon$ -bromo- (MARVEL, MAC-CORQUODALE, KENDALL, and LAZIER), i, 234.  
 $\epsilon$ -cyano- (V. AUWERS, BAHR, and FRESE), i, 312.
- Hexonic acids**,  $\alpha$ -amino-, configuration of (LEVENE), i, 523.
- Hexophosphatases** in organs and body fluids (DEMUTH), i, 1497.
- Hexoses**, amino-, synthesis of, from galactose (FREUDENBERG and DOSER), i, 366.  
 $\alpha$ -amino-, configuration of (LEVENE), i, 523.
- Hexosephosphates**, formation of (NEUBERG and KOBEL), i, 476.
- Hexosephosphoric acid**, esters, in development of bone (MARTLAND and ROBISON), i, 201.
- n*-Hexylglycine**, ethyl ester (KARRER, MIYAMICHI, STORM, and WIDMER), i, 594.
- cyclo*Hexylchloromethylether** (FARREN, FIFE, CLARK, and GARLAND), i, 1230.
- cyclo*Hexylamine**, catalytic decomposition of (KOMATSU and TANAKA), i, 905.
- n*-Hexylbenzene**, 2,4-*di*hydroxy- (SHARP & DOHME and DOHME), i, 541.
- p*-*cyclo*Hexylbenzoyl-*o*-benzoic acid** (QUAYLE and REID), i, 1289.
- cyclo*Hexylbenzyl ether** (SCHOEIGIN), i, 1404.
- cyclo*Hexylbutinenes** (BOURGUEL), i, 1, 770.
- cyclo*Hexylbutinoic acid** (BOURGUEL), i, 770.
- $\gamma\delta$ -Hexylene oxide**, heat of combustion of (ZUBOV and SWIENTOSLAWSKI), ii, 364.
- cyclo*Hexylheptinoic acid** (BOURGUEL), i, 770.
- cyclo*Hexylhexinanes** (BOURGUEL), i, 1, 770.
- cyclo*Hexylhexinoic acid** (BOURGUEL), i, 770.
- cyclo*Hexylhydroxylamine** (VAVON and BERTON), i, 807.
- cyclo*Hexylideneazaine**, action of hydrochloric acid on (PERKIN and PLANT), i, 842.
- cyclo*Hexyldenenitroanthranilic acids** (PERKIN and SEDGWICK), i, 64.
- cyclo*Hexyldenecyclopentylideneazaine** (PERKIN and PLANT), i, 843.
- cyclo*Hexylpentinenes** (BOURGUEL), i, 1, 770.
- cyclo*Hexylpentinoic acid** (BOURGUEL), i, 770.
- $\gamma$ -*cyclo*Hexylpropyl alcohol**, and its derivatives (WASER), i, 584.
- 2-*n*-Hexylcycloelluripentane-3:5-dione** 1:1-dichloride (MORGAN and TAYLOR), i, 634.
- 2-*n*-Hexylcycloelluropentane-3:5-dione** (MORGAN and TAYLOR), i, 634.
- Hippuric acid**, effect of diet on synthesis of (GRIFFITH), i, 1002.  
 effect of carbohydrate metabolism on synthesis of (WIDMARK and JENSEN-CARLEN), i, 331.  
 hydroxylamine salt (OESPER and BALLARD), i, 1233.
- Hippuric diethylamide** (GRANÄCHER), i, 594.
- Hippurylchloride**, action of diazomethane on (KARRER and WIDMER), i, 593.
- Histamine**, effect of injection of, on blood (HASHIMOTO), i, 1005.  
 influence of, on nitrogenous metabolism (IWATSURU), i, 1502.  
 detection of, microchemically (VAN ITALLIE and STEINHÄUER), ii, 608.
- Histidine** in the animal organism (STEWART), i, 730.  
 degradation of, to *L*-aspartic acid (LANGENBECK), i, 306.  
 relation of, to creatine and purine metabolism (ROSE and COOK), i, 1003.
- Holmium**, atomic weight of (DRIGGS and HOPKINS), ii, 463.
- Homatropine *N*-oxide**, and its derivatives (POLONOVSKI and POLONOVSKI), i, 829.
- Homoaspartimide** (STOSIUS and PHILIPPI), i, 892.
- Homobenzoisothioiopyran**, and its derivatives (V. BRAUN, BAYER, and KAISER), i, 1446.
- Homologous compounds**, rotation dispersion, density, and absorption spectra of (KRETHLOW), ii, 1029.
- n*- and *iso*-Homopilopic acids**, methylamides of (LANGENBECK), i, 151.
- N*-Homopiperonyl-4:5-dimethoxyhomophthalamic acid**, and its methyl ester (HAWORTH, PERKIN, and PINK), i, 1169.
- 2-Homopiperonyl-6:7-dimethoxyhomophthalimide**, and its dimethyl derivative (HAWORTH, PERKIN, and PINK), i, 1169.
- 2-Homopiperonyl-6:7-dimethoxy-1-*iso*-quinolone**, 3-chloro- (HAWORTH, PERKIN, and PINK), i, 1169.
- 2-Homopiperonyl-4:4-dimethylhomophthalimide** (HAWORTH, PERKIN, and PINK), i, 1168.
- N*-Homopiperonylhomophthalamic acid**, and its amide and methyl ester (HAWORTH, PERKIN, and PINK), i, 1169.

- 2-Homopiperonylhomophthalimide (HAWORTH, PERKIN, and PINK), i, 1168.
- 3-Homopiperonyl-2-methylchromone, 7-hydroxy-, and its derivatives (BAKER and ROBINSON), i, 926.
- 2-Homopiperonyl-1-isoquinolone, 3-chloro- (HAWORTH, PERKIN, and PINK), i, 1168.
- Homopiperonylresacetophenone (BAKER and ROBINSON), i, 925.
- as-Homotetrahydroisoquinoline methobromide (v. BRAUN and KAISER), i, 1414.
- Homoveratroylhomopiperonylamines, 6'-bromo- (HAWORTH and PERKIN), i, 970.
- 3-Homoveratryl-2-methylchromone, 7-hydroxy-, and its acetyl derivative (BAKER and ROBINSON), i, 926.
- Homoveratrylresacetophenone (BAKER and ROBINSON), i, 926.
- Hops, bitter principles of (WÖLLMER), i, 690.  
preservative principles of (WALKER), i, 1479.  
resin acids of (WIELAND, SCHNEIDER, and MARTZ), i, 276; (WIELAND, MARTZ, and HOEK), i, 1422.  
determination of humulone in (KLEIN), ii, 248.
- Hormones, action of (GOTTSCHALK; ZONDEK and UKO), i, 1513.
- Horn, solubility of, in alkali sulphides (PULEVKA), i, 1341.
- Horse, vitamins in flesh of (SCHEUNERT and HERMERSDÖRFFER), i, 617.
- Humic acids (ELLER, HELMRICH, KLEMM, HAUBOLD, and SCHÖPPACH), i, 521.  
constitution of (BURIAN; ELLER), i, 372; (MARCUSSEN), i, 793.  
formation of, from cellulose, lignin, and wood (WEHMER), i, 521.
- Humins, properties and reactions of (ELLER, HELMRICH, KLEMM, HAUBOLD, and SCHÖPPACH), i, 521.
- Humulic acid, constitution of (WIELAND, MARTZ, and HOEK), i, 1422.
- isoHumulic acid, and its derivatives (WIELAND, SCHNEIDER, and MARTZ), i, 276.
- Humulon, structure of (WIELAND, SCHNEIDER, and MARTZ), i, 276; (WIELAND, MARTZ, and HOEK), i, 1422.
- Humuloquinone, semicarbazone of (WIELAND, SCHNEIDER, and MARTZ), i, 276.
- Humus, nature of (WAKSMAN), i, 1528.  
sols, foaming power and surface tension of (OSTWALD and STEINER), ii, 771.
- Hydantoic acid, cyano- (FROMM, BARRENSCHEN, FRIEDER, PIRK, and KAPPELLER), i, 596.
- Hydantoins (COGHILL and JOHNSON), i, 582; (COGHILL, JOHNSON, and RENFREW; DAVIDSON), i, 583; (DAVIDSON and JOHNSON), i, 584; (DAVIDSON), i, 975.  
substituted, preparation of (THOMPSON, BEDELL, and BUFFETT), i, 699.
- Hydantoin-3-acetic acid, and 2-thio- (JOHNSON and RENFREW), i, 583.
- Hydantoin-[ $\Delta^5:2'$ ]- $\psi$ -indoxyl (HILL and HENZE), i, 306.
- Hydantoin-[ $\Delta^5:3'$ ]-oxindole (HILL and HENZE), i, 305.
- Hydnora americana*. See *Prosopanche Burmeisteri*.
- Hydrangea paniculata*, composition of (KOMATSU and UEDA), i, 762.
- Hydrargyrum salicylicum, constitution of (BOEDECKER and WUNSTORF), i, 1107.
- Hydrastine, excretion of, in urine (BAYLE and FABRE), i, 609.
- Hydratoisocyanilic acid (WIELAND), i, 1049.
- r-Hydratropic acid, 8-chloro-, resolution of (McKENZIE and STRATHERN), i, 401.
- Hydrazidoanthraquinones, acyl derivatives of (BATTAGAY and AMUAR), i, 169.
- Hydrazine, oxidation of, and its sulphonic acids (RASCHIG), ii, 224.  
action of, on cyanotetrazole (OLIVERI-MANDALÀ), i, 78.  
action of, on dimethylpyrone (KJERNER), i, 1105.  
sulphate, use of, in iodometry (CATTELAINE), ii, 1197.  
and its salts, electrometric determination of (GILBERT), ii, 239.
- Hydrazines, action of ketens on (VAN ALPHEN), i, 80.  
action of, on semicarbazones (SUTHERLAND and WILSON), i, 42.  
aromatic halogenated (VOTOČEK and JIRŠ), i, 317.
- $\alpha$ -Hydrazino- $\beta$ -aminoethane, and its salts (SOMMER, SCHULZ, and NASSAU), ii, 990.
- 2-Hydrazinoanthraquinone, 3-hydroxy- (TANAKA), i, 1106.
- 4-Hydrazinobenzoic acid, 3:5-dinitro-, ethyl ester (LINDEMANN and WESSEL), i, 1099.
- 2-Hydrazino-9:10-dihydroanthracene hydrochloride (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 128.
- 2-Hydrazino-5-keto-2:3:4:5-tetrahydro-1:3:4-thiadiazine (GUHA and DE), i, 600.

- Hydrazobenzene** hydroferricyanide (CUMMING), i, 122.
- o*-Hydrazobenzyl-*o*-toluidine** (ELBS and GAUMER), i, 168.
- Hydrazones**, isomeric (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 40.
- coloured sulphuric acid solutions of (CHATTAWAY, IRELAND, and WALKER), i, 1194.
- o*-Hydrazotoluene** hydroferricyanide (CUMMING), i, 122.
- Hydrides**, non-metallic, structure of (GRIMM), ii, 1123.
- volatile (PANETH and RABINOVITSCH), ii, 760.
- "Hydrindine,"** identity of hydroxy-dihydroisindigotin and (SANDER), i, 977.
- 1-Hydrindone**, influence of substituents on formation of derivatives of, from  $\beta$ -phenylpropionic acids (SPEIGHT, STEVENSON, and THORPE), i, 32.
- 1-Hydrindones**, 2-oximino-, action of phosphorus pentachloride on (HAWORTH and PINK), i, 929.
- Hydrobenzoins**, stereoisomeric, adsorption of, by charcoal (HERMANS), ii, 31.
- dibenzoates of (MEERWEIN and SCHMIDT), i, 1240.
- Hydrobromic acid.** See under Bromine.
- Hydrocarbon**,  $C_{16}H_{16}$ , from *tert*-aminoisobornylane and nitrous acid (NAMETKIN, ABAKUMOWSKI, and SELIVANOV), i, 48.
- $C_{10}H_{16}$ , from lupanine (THOMS and BERGERHOFF), i, 575.
- $C_{10}H_{16}$ , from hydrogenation of  $C_{10}H_{16}$  from *tert*-aminoisobornylane (NAMETKIN, ABAKUMOWSKI, and SELIVANOV), i, 48.
- $C_{11}H_{18}$ , from 5-methylphenylene-1:3-diacetonitrile (v. BRAUN and ENGEL), i, 382.
- $C_{15}H_{28}$ , from reduction of humulic acid (WIELAND, SCHNEIDER, and MARTZ), i, 276.
- $C_{18}H_{34}$ , from abietic acid (VESTERBERG and BORGE), i, 252.
- $C_{20}H_{32}$ , from the action of metallic chlorides on pinene hydrochloride (KOMATSU and FUJIO), i, 564.
- Hydrocarbons**, preparation of (GILMAN and BEABER), i, 802.
- X-ray investigation of (MÜLLER and SAVILLE), ii, 367.
- action of bromine on (MERESHKOVSKI), i, 1033.
- action of nitrogen peroxide on (SCHAARSCHMIDT), ii, 227.
- action of radium emanation on (MUND and KOCH), i, 625.
- Hydrocarbons**, halogen derivatives, ultra-red absorption spectra of (BONINO), ii, 338.
- acetylenic, preparation of (BOURGUEL), i, 1, 770.
- disubstituted, reaction of Grignard reagents with (GILMAN and SHUMAKER), i, 493.
- aromatic, Tesla-luminescence spectra of (McVICKER, MARSH, and STEWART), ii, 12.
- photochemical oxidation of (SUDBOROUGH, WATSON, and NARAYANAN), i, 1136.
- condensation of, with nitrosyl chlorine (SCHAARSCHMIDT and RAECK), i, 380.
- polynuclear, spectrochemistry and structure of (v. AUWERS and KRAUL), i, 900.
- benzenoid, optical constants of (EISENLOHR and SCHULZ), i, 17.
- cyclic unsaturated, catalytic transformation of (ZELINSKI), i, 122, 146, 821.
- ethylenic, action of iodine in chloroform on (BÖSEKEN and BLUMBERGER), i, 225.
- combination of hydrogen sulphites with (KOLKER and LAPWORTH), i, 353.
- higher, synthesis of, from lower hydrocarbons (LIND and BARDWELL), i, 493.
- olefine, action of nitrogen tetroxide on (SCHAARSCHMIDT and HOFMEIER), i, 877.
- paraffin, boiling point chart for (BAHLKE and WILSON), ii, 73.
- cracking of (WILLIAMS-GARDNER), i, 1229.
- polynuclear, Tesla-luminescence spectra of (McVICKER, MARSH, and STEWART), ii, 630.
- quaternary, preparation of (TROTMAN), i, 382.
- unsaturated, photochemical combination of bromine with (PLOTNIKOV), ii, 985.
- Hydrocarbons**, chloro-, toxic action of (DOUGAL), i, 334.
- Hydrocellulose** (HESS), i, 519.
- nitrate (ATSUKI), i, 120.
- Hydrochloric acid.** See under Chlorine.
- Hydrocinnamic acid**, electrolytic preparation of (NORRIS and CUMMINGS), i, 668.
- hydroxylamine salt (OESPER and BALLARD), i, 1233.
- Hydrocupreidine hydrochloride** (GIEMSA and BONATH), i, 291.

- Hydrocupreidinesulphonic acid**, and its sulphate (GIEMSA and BONATH), i, 291.
- Hydrocupreine**, salts of (GIEMSA and BONATH), i, 291.
- Hydrocupreinesulphonic acid**, and its salts (GIEMSA and BONATH), i, 291.
- Hydrocyanic acid**. See under Cyanogen.
- Hydroferricyanic acid**, preparation of, and its alkaloidal salts (CUMMING and BROWN), i, 572.
- salts of, with organic bases (CUMMING), i, 122.
- Hydroferricyanocarboxylic acid**, salts of (PASCAL), i, 984.
- Hydroferrocyanic acid**, alkaloidal salts of (CUMMING and BROWN), i, 572.
- copper salt, permeability of membranes of, to acids (COLLANDER), ii, 201.
- coagulation of sols of (SEN), ii, 664; (SEN and MEHROTRA), ii, 665.
- double salts of, with hydrazine and metals (RAY and GUPTA), i, 377.
- potassium salt, preparation of (DOMINIK), i, 526.
- sensitiveness of, to light (BAUR), ii, 884.
- use of, in analysis (LUFF), ii, 826.
- salts of, with organic bases (CUMMING), i, 122.
- Hydroferrocyanocarboxylic acid**, salts of (PASCAL), i, 984.
- Hydrofluoric acid**. See under Fluorine.
- Hydrogen**, atomic weight of (MOLES), ii, 346.
- atoms, structure of (REICHENBÄCHER), ii, 734.
- electron orbits in (REICHENBÄCHER), ii, 624.
- molecules, ionised, structure of (UREY), ii, 1105.
- pure, preparation of (BAYERLE and TAMELE), ii, 233.
- refractive index and electron velocity of (SCHÜLER and WOLF), ii, 1118.
- spectrum of (DIEKE), ii, 450; (GEHRCKE and LAU), ii, 609; (SCHÜLER and WOLF), ii, 829; (VAN CITTERT), ii, 909.
- Balmer lines in (HANOT), ii, 170; (JANIČKI), ii, 449; (HANSEN), ii, 1097; (HAM and GEHRCKE), ii, 1098; (JOLOWICZ), ii, 1097.
- Fulcher lines in spectrum of (CURTIS), ii, 351; (BURY), ii, 1113.
- excitation of (BLACKETT and FRANK), ii, 1097.
- spectrohellograms of (ROYDS), ii, 459.
- band spectrum of (DIEKE), ii, 737.
- Hydrogen**, continuous spectrum of (CARST), ii, 333; (LAU), ii, 721.
- infra-red emission spectrum of (PFUND), ii, 11.
- secondary spectrum of (RICHARDSON and TANAKA), ii, 11, 469; (DUFFENDACK), ii, 333; (NICHOLSON), ii, 468, 721; (MCLENNAN and SHRUM), ii, 468; (DIEKE), ii, 625; (RICHARDSON), ii, 909, 1013; (TANAKA and SANDEMAN), ii, 909.
- dry, effect of ultra-violet light on (BAKER and CARLTON), ii, 1180.
- particles, photographic action of (BLAU), ii, 1111.
- passage of canal rays through (DEMPSTER), ii, 1020.
- Döppler effect in canal rays of (KREFFT), ii, 78.
- Paschen-Back effect in (FALKENHAGEN), ii, 79.
- stopping power of, for  $\alpha$ -particles (FOWLER), ii, 834.
- magnetic susceptibility of (GLASER), ii, 82, 642.
- active (BONHOEFFER), ii, 52; (PANTH), ii, 57; (COPAUX, PERPEROT, and HOCART), ii, 587; (COLLINS), ii, 842; (BACH), ii, 885.
- formation of, in the creepage corona discharge (ANDEREGG and HERR), ii, 1180.
- by excited mercury atoms, and its reactions (MITCHELL), ii, 1077; (TAYLOR and MARSHALL), ii, 1078.
- luminescence with (BONHOEFFER), ii, 839.
- electronegative (VAN ARKEL and DE BOER), ii, 734.
- electrical properties of (MCALLUM and FOCKEN), ii, 641.
- ionisation of (SMYTH), ii, 459; (LUNT), ii, 616.
- by electron impact (HOGNESS and LUNN), ii, 839.
- potentials for discharge of electrons in (RICHARDSON and TANAKA), ii, 13.
- overvoltage of (HARKINS and ADAMS), ii, 301.
- influence of colloids on cathodic overvoltage of (MARIE and LEJEUNE), ii, 115.
- chemical constants of (SCHREINER), ii, 978.
- specific heat of (PARTINGTON and HOWE), ii, 1041.
- specific heats of air and (BRINKWORTH), ii, 372.
- specific heat of molecules of (PREDVO-DITELEV), ii, 1041; (VAN VLECK), ii, 1138.

**Hydrogen**, isotherms of (HOLBORN and OTTO), ii, 851.  
 heat of adsorption of, on nickel (FORESTI), ii, 692.  
 heat of oxidation of, by manganese dioxide (FRAZER and GREIDER), ii, 1064.  
 mass of particles of (STETTER), ii, 1021.  
 liquid and solid, dielectric constants of (WOLKE and ONNES), ii, 630; (BREIT and ONNES), ii, 631.  
 liquefier for, and cryostat (LATIMER, BUFFINGTON, and HOENSEL), ii, 818.  
 viscosity of (GÜNTHER), ii, 100.  
 diffusion of, into air (BARUS), ii, 27.  
 solubility of, in liquid ammonia (LARSON and BLACK), ii, 852.  
 adsorption of, by cerium and its alloys (SIEVERTS and ROELL), ii, 854.  
   by electrolytic chromium (HÜTTIG and BRODKORB), ii, 702.  
   by palladium (LAMBERT and GATES), ii, 785.  
   by palladium-silver alloys (KRUGER and SACKLOVSKY), ii, 1125.  
 adsorbed in silica gels, reduction by (LATSHAW and REVERSON), ii, 412.  
 equilibrium of carbon dioxide and, with carbon monoxide and water vapour (PARTINGTON and SHILLING), ii, 395.  
 explosion of mixtures of air and (BONE, NEWITT, and TOWNEND), ii, 800.  
 influence of trichloroethylene on inflammability of mixtures of air and (JORISSEN and ONGKIEHONG), ii, 875.  
 photochemical combination of bromine and (BODENSTEIN and LÜTKE-MEYER), ii, 218.  
 interaction of carbon dioxide and, in the electric discharge (LUNT), ii, 579.  
 action of carbon dioxide with, on platinum (PRICHARD and HINSHELWOOD), ii, 564.  
 action of carbon dioxide with, on the surface of tungsten (HINSHELWOOD and PRICHARD), ii, 983.  
 photochemical reaction of carbonyl chloride with (BREDIG and v. GOLDBERGER), ii, 142.  
 photochemical reaction between chlorine and (MARSHALL), ii, 883; (KORNFIELD and MÜLLER), ii, 984; (NORRISH), ii, 1080, 1179.  
 in presence of oxygen (NORRISH and RIDEAL), ii, 572.  
 effect of water vapour (COEHN and JUNG), ii, 142.

**Hydrogen**, catalytic combination of ethylene and, in presence of copper (PEASE and STEWART), ii, 691.  
 reaction of nitrogen with, in presence of mercury vapour (NOYES), ii, 573.  
 catalysis of the formation of water from oxygen and (HOFMANN and DOLDE), ii, 139.  
 combination of oxygen and, in presence of silver and gold (CHAPMAN, RAMSBOTTOM, and TROTMAN), ii, 310.  
 effect of water and of carbon dioxide on the catalytic oxidation of (LAMB and VAIL), ii, 567.  
 oxidation of, by potassium permanganate (WILKE and KUHN), ii, 51.  
 reduction of metallic halides by (DE CARLI), ii, 51.  
**Hydrogen chloride**. See Hydrochloric acid under Chlorine.  
 cyanide. See Hydrocyanic acid under Cyanogen.  
 halides. See Halogen hydrides.  
 iodide. See Hydriodic acid under Iodine.  
 peroxide, formation of, by bacteria (MCLEOD and GORDON), i, 1362.  
 vapour pressure of (MAASS and HIEBERT), ii, 188.  
 partition of, between water and ethyl ether (DE KOLOSOVSKI), ii, 506.  
 in the oxy-hydrogen flame (RIESEN-FELD), ii, 148.  
 decomposition of (DAVEY), ii, 1181.  
   by catalase (NORTROP), i, 469.  
   by cobaltic hydroxide (TRYHORN and JESSOP), ii, 807.  
   in presence of nickel hydroxide (VEIL), ii, 412.  
 catalytic decomposition of (QUARTAROLI; SPITALSKY and PETIN), ii, 53.  
   by animal charcoal (FIRTH and WATSON), ii, 310.  
   by "Norit" charcoals (FIRTH and WATSON), ii, 880.  
   in chlorine-chloride solutions (LIVINGSTON and BRAY), ii, 981.  
 promotion of copper salts in the decomposition of, by ferric salts (ROBERTSON), ii, 690.  
 mode of reaction of (WIELAND, HAUSSMANN, and LÖVENSCHILD), ii, 1173.  
 oxidising action of (HATCHER and HOLDEN; ERNST and FORSTER), ii, 684.  
 destruction of organic matter by (MAGNIN), ii, 594.

**Hydrogen peroxide**, action of, on bacteria (BURNET), i, 1117; (PETROVANU), i, 1362.

titration of, with potassium permanganate in presence of ammonium sulphate (TANANAEV), ii, 440.

determination of (RUPP and SIEBLER), ii, 432.

phosphide. See Phosphorus trihydride.

sulphide in minerals (NENADKOVITSCH; VERNADSKI), ii, 997.

formation of, by bacteria (MULSOW and PAINÉ), i, 1510.

electrolytic preparation of (FISCHER), ii, 807.

generation of (HENWOOD, GAREY, GOLDBERG, and FIELD), ii, 705.

pure liquid, preparation of, and reactions therein (QUAM), ii, 582.

liquid, as a source of supply of the gas (MOORE), ii, 1195.

conductivities in (QUAM and WILKINSON), ii, 542.

condensation of acetylene and, in presence of catalysts (TOMKINSON), i, 58.

action of iodine on (PARSONS), ii, 880.

action of, on mercuric salts (PÉLABON), ii, 986.

toxicity of (HAGGARD), i, 1357.

persulphide (v. DIENES), ii, 228.

#### **Hydrogen determination** :—

determination of, in organic compounds (HESLINGA), ii, 65; (LINDNER), ii, 901.

**Hydrogen electrodes**. See Electrodes.

**Hydrogen ions**, adsorption of, by charcoal (KROETZ), ii, 191.

mobility of (DAVIES), ii, 871.

in air (ERIKSON), ii, 1107.

velocity of, in gels (ISGARISCHEV and POMERANZEVA), ii, 300.

concentration of, in culture fluids (CHRISTENSEN and FULMER), i, 1216.

in soils (ARRHENIUS), i, 1525; (PIERRE; NIKLAS and HOCK), i, 1526.

in blood (BIGWOOD), i, 1342.

of normal and cancer subjects (CORRAN and LEWIS), i, 188.

in tissues and cells (SCHMIDTMANN), i, 99.

determination of concentration of (MISLOWITZER), i, 1433; (TRÉNEL), ii, 64.

colorimetrically (RICHARD), ii, 596.

electrometrically (GLASSTONE), ii, 822.

**Hydrogen ions**, determination of concentration of, with the quinhydrone electrode (SCHAEFFER and SCHMIDT), i, 611; (KOLTHOFF), ii, 671; (O'SULLIVAN), ii, 822.

from potentials of hydrogen and quinhydrone electrodes (KOLTHOFF), ii, 794.

spectrophotometrically (VLÈS), ii, 595; (HOLMES and SNYDER), ii, 999.

in blood (HOLLO and WEISS), i, 709.

in soils (ATKINS; BARNETTE, HISSINK, and VAN DER SPEK), i, 220; (TRÉNEL), i, 874; (CROWTHER), i, 875; (NIKLAS and HOCK), ii, 325.

in distilled water (DAWSON), ii, 680.

electrodes for (CULLEN and BILLMANN; BODINE and FINK), i, 1201; (PARKER), ii, 899.

continuous reading meter for (GOODE), ii, 1196.

**Hydrogenase**, action of, in the cell (GRÜSS), i, 738.

**Hydrogenation**, kinetics of (LUSH), ii, 411.

**Hydrolysis**, electrometric study of (JOB), ii, 117.

**Hydroxides**, amphoteric (JANDER and BRANDT), ii, 988.

**Hydroxy-acids**,  $C_{11}H_{10}O_8$ , from atromentin (KÖGL and POSTOWSKY), i, 51.

$\alpha$ - and  $\beta$ -Hydroxy-acids, configurational relationship between (LEVENE and HALLER), i, 1375.

**Hydroxy-aldehydes** (HELFERICH and SCHÄFER), i, 7; (HELFERICH and FRIES), i, 1039.

**Hydroxy-compounds**, aromatic, action of sulphites on (BUCHERER and STICKEL), i, 1388.

$\alpha$ -Hydroxy-ketones, synthesis of (SCHMIDT and ASCHERL), i, 864.

**Hydroxyl groups**, valency of (REIHLEN, SAPPER, and KALL), i, 912.

co-ordination valency of (FERNANDES), i, 912.

mobility of, and tautomerism (FARROW and INGOLD), i, 155.

determination of, microchemically (FLASCHENTRÄGER), ii, 999.

**Hydroxyl ions**, adsorption of, by charcoal (KROETZ), ii, 191.

**Hydroxylamine**, preparation of (HURD and BROWNSTEIN), ii, 587.

oxidation of (RASCHIG; KURTENACKER and WENGEFELD), ii, 224.

catalytic decomposition of (KURTENACKER and WENGEFELD), ii, 308.

- Hydroxylamine**, action of sulphurous acid and sulphites on (RASCHIG), ii, 226.  
 salts of, with organic acid (OESPER and BALLARD), i, 1233.  
 alkyl derivatives of (NEUFFER and HOFFMAN), i, 891.  
 benzenesulphinat (WHALEN and JONES), i, 802.  
 sulphonic acids of (RASCHIG), ii, 225, 226.  
 **$\beta$ -Hydroxylamines**, formation of (DURAND and NAVES), i, 535.  
**Hydroxylamine**sulphonic acid (SOMMER, SCHULZ, and NASSAU), ii, 989.  
**3-Hydroxylaminopyridine**. See  $\beta$ -3-Pyridylhydroxylamine.  
**Hydroxylaminotetraphenylmethane**, and nitroso- (GOLDSCHMIDT and CHRISTMANN), i, 649.  
**Hydroxymethyleneacetophenone**. See Phenyl  $\beta$ -hydroxyvinyl ketone.  
**Hydroxynitrile**, purification and properties of (NORDEFELDT), i, 1508.  
**Hygrine alkaloids** (HESS and BAPPERT), i, 424.  
**Hygrinic acid** (KARRER and WIDMER), i, 1084.  
**Hyochoanic acid**, 4-chloro- and 4-hydroxy-, derivatives of (WINDAUS and HOSSEFELD), i, 1066.  
**Hydoxybillionic acid**, derivatives of (WINDAUS and BOHNE), i, 553.  
**Hyoscyamine N-oxide**, and its derivatives (POLONOVSKI and POLONOVSKI), i, 829.  
**Hyperglycæmia**, production of, by glycerol (VOEGTLIN, THOMPSON, and DUNN), i, 1211.  
***Hypericum perforatum***, constituents of (ZELLNER), i, 764.  
**Hypobromites**. See under Bromine.  
**Hypocerebric acid** (FRÄNKEL and KARPEN), i, 720.  
 **$\Delta^{\alpha}$ -Hypogæic anhydride** (GABEL), i, 504.  
**Hypoglycæmia** (FISCHLER and OTTENSOOSER), i, 715.  
**Hypoiodites**. See under Iodine.  
**Hyponitritotetraphenylcyanic acid**, sodium salt (UNGARELLI), i, 526.  
**Hyssopin**. See Diosmin.  
**Hystazarindiquinone** (TANAKA), i, 1077.  
**Ice**, infra-red absorption spectrum of (PLYLER), ii, 87.  
 specific heat and latent heat of fusion of (MAASS and WALDBAUER), ii, 492.  
**Ice**, velocity of crystallisation of, through gelatin gels (CALLOW), ii, 777.  
**Ignition of gases** (WHEELER), ii, 408.  
 by electric sparks (MORGAN), ii, 553.  
 influence of non-inflammable vapours on (JORISSEN and VAN DER VALK), ii, 874; (JORISSEN and ONGKIEHONG), ii, 875.  
**Imbibition**, application of Röntgen ray methods to (KATZ), ii, 771.  
**Iminazole**. See Glyoxaline.  
**Iminazoles**, complex, colour of (CHAKRAVARTI and GUPTA), i, 980.  
**4-Iminazole-2(1')-naphthyl-8'-carb-oxylic acid** (CHAKRAVARTI), i, 162.  
**Imines**, halochromism of, and their compounds (PFEIFFER, RHEINBOLDT, and WOLF), i, 411.  
**2:5-Imino-1:2:3-triazole** (CARNELLEY and DUTT), i, 165.  
**Immunisation** by injection of invertase (BACH, ENGELHARDT, and SAMYSLOV), i, 1506.  
**Inchi grass**. See *Cymbopogon caesius*.  
**Indacene**, dihydroxy-, diacetyl derivative (JONESCU), i, 1154.  
**Indandione**. See Diketohydrindene.  
**Indandionyl-di-indonylmethane** (RADULESCU and GEORGESCU), i, 1287.  
**Indane**,  $\alpha$ -halides of (COURTOT and DONDELINGER), i, 654.  
**cis-1:2-Indanediol**, potassium borate of (HERMANS), i, 501.  
**Indanylamines**, optical constants of (COURTOT and DONDELINGER), ii, 274.  
**Indazole o-toluenesulphonate** (v. AUWERS), i, 1461.  
**Indazole**, 3-bromo-, nitrobenzoyl derivative, 5:7-di- and 3:5:7-tri-bromo- (v. AUWERS and LOHR), i, 74.  
**Indazoles** (v. AUWERS and LOHR), i, 73; (v. AUWERS and FRESE), i, 1101.  
**Indazolium salts**, quaternary, thermal decomposition of (v. AUWERS and PFUHL), i, 1100.  
**Indene**, polymerides of (STOBBE and FÄRBER), i, 19.  
 polymerisation and oxidation of the vapour of (BROWN), i, 1258.  
 bisnitrosocloride (SIRRAUS and EK-HARD), i, 1139.  
 oxide, chloro- (GOLDSCHMIDT and SCHÜSSLER), i, 498.  
**Indican**, detection and determination of, in urine (GORE), i, 136.  
**Indicators**, influence of alcohol, salts, and temperature on (RICHTER), ii, 237.

- Indicators**, determination of dissociation constants of (HOLMES and SNYDER), ii, 999.
- hydrogen-ion concentration and dissociation constants of** (HOLMES and SNYDER), ii, 325.
- for use with weak acids and bases (CHABOT), ii, 899.
- for determination of hydrogen ions in soils (NIKLAS and HOCK), i, 348.
- salt errors of (KOLTHOFF), ii, 596.
- Indigo colouring matters** (FINGER and KRAFT), i, 73; (REINDEL and RAUCH), i, 438; (SANDER), i, 982.
- with a hydrogenated six-membered ring (ARNDT and PUSCH), i, 1812.
- of the naphthalene series (FRIEDLÄNDER), i, 956.
- Indigotin**, action of chromic acid on (EYMER), i, 1174.
- metallic derivatives of (KUNZ and STÜHLINGER), i, 1318.
- Indigotin**, 4:4'-dichloro-5:7:5':7'-tetraiodo-, and 5:6:7:5':6':7'-hexaiodo- (KALB and VOGEL), i, 161.
- 5:7:5':7'-tetraiodo- (KALB and BERRER), i, 160.
- 7:7'-*iso*Indigotindisulphonic acid, and its salts (WAHL and FAIVERT), i, 588.
- "**Indine**," identity of *iso*indigotin and (SANDER), i, 977.
- Indium**, spark spectrum of (WEINBERG), ii, 249; (RAO), ii, 610; (CARROLL), ii, 1101.
- analysis of (HEYROVSKÝ), ii, 717.
- Indole**, synthesis of (NENTZESCU), i, 973.
- hydrogenation of (WILLSTÄTTER, SEITZ, and v. BRAUN), i, 428.
- derivatives, substituted (SEKA), i, 67.
- detection of (KOSER and GALT), i, 1510.
- determination of, in bacterial cultures (FELLERS and CLOUGH), i, 1015.
- Indole**, 3-cyano- (GAVRILOV), i, 578.
- 6-cyano- (KERMAK), i, 68.
- Indoles**, catalytic synthesis of (KORCZYŃSKI and KIERZKE), i, 973, 1097.
- mechanism of Fischer's synthesis of (BODFORESS), i, 698.
- catalytic hydrogenation of (v. BRAUN and BAYER), i, 428.
- substituted, preparation of (VERLEY and BEDUWÉ), i, 578.
- Indole colouring matters** (KÖNIG), i, 1184.
- Indole series**, syntheses in the (KERMAK), i, 67; (MAJIMA and KOTAKE; MAJIMA and HOSHINO), i, 1450.
- Indole-2-aldehyde**, derivatives of (MAJIMA and KOTAKE), i, 1450.
- Indole-2-carboxydimethylacetyl-amide**, 6-cyano- (KERMAK), i, 68.
- Indole-2-carboxylic acid**, 6-cyano-, and its ethyl ester (KERMAK), i, 67.
- Indole-6-carboxylic acid** (KERMAK), i, 68.
- Indole-2:6-dicarboxylic acid**, and its ethyl ester (KERMAK), i, 67.
- iso*Indole-2-oxide**, 1(or 3)-hydroxy- (GRIFFITHS and INGOLD), i, 1191.
- "**3-Indole-2-thionaphthenindigo**," 5:7'-diiodo- (KALB and BERRER), i, 160.
- Indolyl-3-acetic acid**, and its picrate and derivatives (MAJIMA and HOSHINO), i, 1451.
- 3- $\beta$ -Indolylpropionic acid**, and its picrate (MAJIMA and HOSHINO), i, 1451.
- 3- $\beta$ -Indolylpropionitrile**, and its picrate (MAJIMA and HOSHINO), i, 1451.
- Indone**, perchloro-, additive compounds of acenaphthene, durenene, fluorene, scatole, and  $\alpha$ - and  $\beta$ -naphthols (PFEIFFER, GOEBEL, and ANGERN), i, 271.
- Indones** (DE FAZI), i, 263, 269.
- Indophenols**, preparation of (CASSELLA & Co.), i, 397.
- oxidation-reduction potentials of (COHEN, GIBBS, and CLARK), i, 25.
- Indophenol- $\alpha$ -naphthol-2-sulphonic acid**, sodium salt, dissociation constant of (HOLMES and SNYDER), ii, 999.
- Indorhodin** (KÖNIG), i, 1184.
- $\psi$ -Indoxylspirocyclopentane**, alkali derivatives of (SIDGWICK and PLANT), i, 298.
- Induline-6B**, synthesis of (KEHRMANN and STANOVÉVITCH), i, 1334.
- Infusoria**, effect of dyes on the multiplication of (ROBERTSON), i, 1012.
- effect of oxysterol and cholesterol on growth of (ROBERTSON), i, 1119.
- Inosic acid**, brucine salt (PRISE), i, 1477.
- Inositol** (NEEDHAM), i, 192.
- Insects**, metabolism and development of (FINK), i, 726.
- blood of. See Blood.
- Insecticides**, fatty acids as (SIEGLER and POPENOE), i, 489.
- Insulators**, liquid, breakdown of (GYEMANT), ii, 1028.
- Insulin** (CHEADLE), i, 106; (COLLAZO, HÄNDEL, and RUBINO), i, 343; (RENSHAW), i, 617; (ABEL and GEILING), i, 1218; (ABEL, GEILING, ALLES, and RAYMOND), i, 1512.
- from fish (McCORMICK and NOBLE; McCORMICK), i, 754.
- preparation of (SCOTT and BEST), i, 617.
- testing preparations of (HARRI), i, 617.

- Insulin**, mechanism of the action of (BIS-SINGER, LESSER, and ZIFF), i, 209 ; (ISAAC and ADLER ; KUHN, BAUR, and HECKSCHER), i, 343 ; (BAUR and KÜHN), i, 482 ; (MANSFELD and GEIGER), i, 1016.  
 co-enzyme function of (VIRTÄNEN), i, 753.  
 distribution of, in normal and depancreatised dogs (NOTHMANN), i, 1219.  
 antagonism of adrenaline and (GOTTSCALK ; ZONDEK and UCKO), i, 1513.  
 action of pepsin on (EPSTEIN), i, 1513.  
 effect of phosphates on action of (DESGREZ, BERRY, and RATHERY), i, 1016.  
 and secretin (PENAU and SIMONNET), i, 482.  
 action of trypsin on (SCOTT), i, 870.  
 physiological action of (SERONO, TROCELLO, and CRUTO), i, 208.  
 effect of, on the composition of blood (MAZZOCCO and MORERA ; SAVINO), i, 482.  
   on lactic acid in blood (COLLAZO and LEWICKI), i, 870.  
   on sugar in blood (HÄUSLER and LOEWI), i, 753.  
   on lactic acid in blood and tissues (CORI), i, 753 ; (BEST and RIDOUT), i, 754.  
   on intermediate carbohydrate metabolism (BRUGSCH and HORSTERS), i, 208.  
   on cholesterol metabolism (NITZESCU and CADARIU), i, 1364.  
   muscle tissue and, on dextrose (LUNDGAARD and HOLBØLL), i, 208.  
   in diabetes (LAWN and WOLF), i, 483.  
   on liver glycogen (CORI), i, 753.  
   on glycolysis (NITZESCU and CADARIU), i, 1352.  
   on hydrogen-ion concentration in (GIGON), i, 1219.  
   on lactic fermentation (NOYES and ESTILL), i, 107.  
   on lactic acid metabolism (COLLAZO and SUPNIEWSKI), i, 342.  
   on oxidation in muscle (AHLGREN ; NITZESCU and COSMA), i, 482.  
   on functions of oxygenated yeast (FÜRTER), i, 107.  
 reactions of (STIX), i, 1218 ; (BENEDICT ; EADIE, MACLEOD, and NOBLE), i, 1512.  
 ninhydrin reaction with (ABDERHALDEN), i, 753.
- Insulin**, detection of enzymes in (GLASER and WITTNER), i, 209.  
 biochemical determination of (WYSS), i, 1220.  
**Interferometric studies** (BELTZ and KAUFMANN), i, 1200.  
**Interferometry**, light filter for (FERGUSON), ii, 839.  
**Intestines**, reduction in (BERGEIM), i, 99.  
   action of atropine and of organic acids on (JENDRASSIK and TANGEL), i, 1502.  
   of lamellibranchs and gastropods, hydrogen-ion concentration in (YONGE), i, 1489.  
   analyses of gases in cysts of (PASCUAL VILA), i, 329.  
**Intoxication** (DAVIDSON), i, 1503.  
**Inulin**, determination of molecular weight of, in liquid ammonia (SCHMID and BECKER), i, 1386.  
**Invertase** (WILLSTÄTTER, KRAUT, and WENZEL ; WILLSTÄTTER and SCHNEIDER), i, 739 ; (WILLSTÄTTER, SCHNEIDER, and BAMANN), i, 1359.  
   constitution of (v. EULER and JOSEPHSON), i, 1008.  
   absorption of the specific radiation of (BARENDRECHT), i, 203.  
   in leaves (BLAGOVESHCHENSKI and SOSSIEDOV), i, 1007.  
   hydrolysis of sucrose by, in presence of  $\alpha$ -methylglucoside (NELSON and FREEMAN), i, 739.  
   action of, on  $\gamma$ -methylfructoside (SCHLUBACH and RAUCHHALLES), i, 1243.  
   increased content of, in yeast (WILLSTÄTTER, LOWRY, and SCHNEIDER), i, 1214.  
   immunisation by injection of (BACH, ENGELHARDT, and SAMYSSLOV), i, 1506.  
**Invert-sugar**, mutarotation of (NELSON and BODANSKY), i, 1008.  
   specific rotation of (ZERBAN), ii, 479.  
   sweetness of (WILLAMAN, WAHLIN, and BIESTER), i, 1499.  
   determination of (DE WOLFF), ii, 245.  
   determination of, in liquids containing sucrose (VAN DEN HOUT, NEETESON, and VAN SCHERPENBERG), ii, 74, 445 ; (SCHOORL), ii, 445, 828.  
   determination of boric acid with (GILMOUR), ii, 68.  
**Iodates**. See under Iodine.  
**Iodine**, in atmospheric air (v. FELLENBURG), ii, 315.  
   occurrence of, in nature (v. FELLENBURG), i, 329, 347 ; (v. FELLENBURG and GELLINGER), i, 339.

**Iodine** in rocks and earths (v. FELLEBERG; v. FELLEBERG, GEILINGER, and SCHWEIZER), ii, 321.  
 in sea foods (TRESSLER and WELLS), i, 183.  
 evolution of, from sea water (v. FELLEBERG), ii, 306.  
 intensity of the spectrum of (STEBING), ii, 830.  
 absorption spectrum of (FÜCHTBAUER, WAIBEL, and HOLM), ii, 338.  
 effect of density on the absorption spectrum of (PEROT and COLLINET), ii, 737.  
 band and line spectra of (CARIO and OLDENBERG), ii, 470.  
 line spectrum of (FÜCHTBAUER and HOLM), ii, 626.  
 resonance spectrum of (TURNER and COMPTON), ii, 725; (KRATZER and SUDHOLT), ii, 839.  
 ultra-violet fluorescence of (OLDENBERG), ii, 88.  
 vapour, ionisation of, by ultra-violet light (WEST and LUDLAM), ii, 476.  
 hydrolysis of, measured by the iodine electrode (MURRAY), ii, 555.  
 liquid, viscosity of (STEACIE and JOHNSON), ii, 376.  
 adsorption of, by charcoal (WEISSENBARGER and WALDMANN), ii, 655.  
   by "norit" charcoals (FIRTH and WATSON), ii, 880.  
   by starch (ANGELESCU and MIRCESCU), ii, 1149.  
 compound of starch with (MURRAY), i, 889.  
 blue adsorption compounds with (BARGER and EATON), i, 44.  
 diffusion of, in pure and mixed solvents (GRÖH and KELP), ii, 1049.  
 vapour, diffusion of, through nitrogen (MULLALY and JACQUES), ii, 27.  
 chemical constants of (WOHL), ii, 98.  
 formation of emulsions by (HOLMES and WILLIAMS), ii, 531.  
 addition of, to ethylenic compounds (ANDRÉ and FRANÇOIS), i, 356.  
 catalytic action of, in elimination of hydrogen halides (DESAR), i, 387.  
 action of, on benzene (COSTEANU), i, 238.  
 photochemical action of, on *p*-chlorotoluene (SILBERRAD), i, 16.  
 action of light on the reaction of ferrous salts with (RIDEAL and WILLIAMS), ii, 416.  
 action of hydrogen sulphide on (PARSONS), ii, 880.  
 mechanism of the reaction between iodine and (ECKERT), ii, 52.  
 action on cereals (PARSONS), ii, 880.

**Iodine**, action of red phosphorus on carbon disulphide solutions of (TRAXLER and GERMANN), ii, 1087.  
 effect of light on the reaction of potassium oxalate with (BERTHOUD and BELLENOT), ii, 141.  
 action of, on pyrrole (G. E. K. and H. E. H. BRANCH), i, 66.  
 oxidation of uric acid with (FÜRTH), i, 1462.  
 antilipolytic action of (VOLLMER, SCHMIDT, and SEREBRIJSKI), i, 335.  
 keeping properties of tincture of (COLLARD), ii, 1168.  
 absorption, distribution, and determination of, in the thyroid gland (RABINOVITSCH and FRITH), i, 1488; (ABELLES and POPPER; PICKWORTH), i, 1489.  
**Hydriodic acid**, and its sodium salt, conductivities of, in methyl and ethyl alcohols (GOLDSCHMIDT and DAHL), ii, 128.  
 oxidation of (WINTHER), ii, 56.  
 catalytic decomposition of, on the surface of gold (HINSHELWOOD and PRICHARD), ii, 981.  
 reduction of halogenated malonyl derivatives by (WEST), i, 524.  
**Iodides**, electrolytic preparation of (FISCHER), ii, 808.  
 reactions between chlorine water and (MÜLLER and JUNCK), ii, 584.  
 oxidation of, by ferric salts and ferricyanides (WAGNER), ii, 49.  
 reactions between iodates and (MÜLLER and JUNCK), ii, 585.  
 reduction of permanganates by (MÜLLER and MÖLLERING), ii, 305.  
 reaction between persulphates and, in gelatin (RAWLING and GLASSETT), ii, 561.  
 detection of traces of (WADE), ii, 598.  
 determination of (SCHULEK), ii, 712.  
 determination of, microchemically, with bromine and chlorine (STREBINGER and POLLAK), ii, 823.  
 determination of, volumetrically (SASAKI), ii, 433.  
 determination of, volumetrically, with iodates (KOLTHOFF), ii, 1000.  
 determination of, in urine (v. BODÓ), i, 1490.  
**Iodic acid**, use of, in volumetric determination of thiosulphate (RUSZKOWSKI), ii, 156.

**Iodine :—**

Iodates, presence of in surface waters (HICKETHIER and JACOBUCCI), ii, 1197.

catalysis of the reaction between iodine and (EGGERT), ii, 52.

reactions between iodides and (MÜLLER and JUNCK), ii, 585.

determination of, in the presence of hypoiodites, and bromates (SCHULEK), ii, 1197.

Hypoiodites, determination of, in the presence of iodates (SCHULEK), ii, 1197.

**Iodine determination :—**

determination of small quantities of (LANGE and WARD), ii, 598.

determination of, in natural products (v. FELLEBERG), i, 329.

determination of, in biological material (KELLY and HUSBAND), i, 183.

Iodoform, compounds of, with quaternary salts (STEINKOPF and BESSARITSCH), i, 495.

Iodomercurates, organic, preparation of, from iodoantimonates (CAILLE and VIEL), i, 68.

Iodometry, standardisation of solutions in (POPOV and WHITMAN), ii, 1093.  
benzene as indicator in (KANÔ), ii, 1010.

Ions, refraction and electron constraint in (SMYTH), ii, 843, 1019.

magnetic properties of (FOEX), ii, 345.

emission of, from heated metals (ROY), ii, 731.

liberation of, in gaseous reactions (BREWER), ii, 919.

electric field of, and neutral salt action (DEBYE and MCAULAY), ii, 171.

determination of the charge on (HULL and WILLIAMS), ii, 253.

dimensions of, in aqueous solutions (JABŁCZYŃSKI), ii, 33.

theory of diffusion of, in discharge tubes (SCHOTTKY), ii, 79.

adsorption of (AUDUBERT and QUINTIN), ii, 384; (MUKHERJEE and RAY), ii, 385.

ammoniation of, in aqueous solutions (LOŠAN), ii, 654.

antagonism of (MINAKAMI), ii, 860.

hydration of (FRICKE), ii, 36; (BABOROVSKY), ii, 1151.

mobility of (MESTREZAT and GARREAU), ii, 543.

in air (GRINDLEY and TYNDALL), ii, 80.

in ethyl ether (LOEB), ii, 832.

in gases (LOEB and ASHLEY), ii, 7; (LOEB), ii, 461; (WAHLIN), ii, 615.

in liquids (LINDEMANN), ii, 127.

Ions, diffusible (NORTHROP), i, 864.

electrolytic. See Electrolytic ions.

isotropic, in relation to molecular and crystal structure (HUND), ii, 1132.

negative, mobility of, in flames (WATT), ii, 170.

triatomic, stability and heats of formation of (HEISENBERG), ii, 16.

Ionisation, Bohr's theory of (ANSLOW), ii, 343.

formula for (MILNE), ii, 920.

influence of radiation on (SAHA and SWE), ii, 254; (WOLTJER), ii, 343.

and vapour pressure of gases (BECKER), ii, 342.

energy absorbed by (GREBE), ii, 615.

in air (LEHMANN and OSGOOD), ii, 832.

of electrolytes (SCARPA), ii, 128.

of binary electrolytes (SEMENTSCHENKO), ii, 117.

of weak electrolytes in aqueous-alcoholic solutions (MIZUTANI), ii, 867.

of gases (LANGMUIR and JONES), ii, 169.

by  $\alpha$ -particles (GURNEY), ii, 256.

by slow-moving electrons (JESSE), ii, 919.

by collision of electrons (FOWLER), ii, 7; (COMPTON and VAN VOORHIS; TUVE; TATE; WALDIE), ii, 1106.

of salt vapours (KONDRATÉV), ii, 615.

lecture experiments to illustrate (KOLTHOFF), ii, 819.

thermal, of metallic salts (ROLLA and PICCARDI), ii, 1018.

Ionisation potential, method of estimating (HARTREE), ii, 5.

of rare gases (HERTZ and KLOPPERS), ii, 342.

Ionium (KAMMER and SILVERMAN), ii, 1186.

Ionogens (BLUM), ii, 402.

Ipecacuanha alkaloids (KELLER and BERNHARD), i, 1086.

azo colouring matters of (PALKIN and WALES), i, 1087.

Iridium chloride, compound of carbon monoxide and (MANCHOT and GALL), ii, 232.

halides (KRAUSS and GERLACH), ii, 1089.

tetroxide (KRAUSS and GERLACH), ii, 424.

Irisin, and its derivatives (v. EULER and ERDTMAN), i, 1369.

Iron, pure, structure and thermo-electric power of (GORTZ), ii, 485.

spectrum of (LAPORTE), ii, 4; (CATALÁN), ii, 167; (GOUDSMIT), ii, 611.

**Iron**, spark spectrum of (L. and E. Bloch), ii, 78, 727.  
 soft X-rays from (THOMAS), ii, 336.  
 magnetic properties of crystals of (WEBSTER), ii, 369.  
 films, magnetic properties of (SORENSEN), ii, 82.  
 magnetic permeability of (NIKITIN), ii, 178.  
 magnetostrictive effects in (McCORKLE), ii, 487.  
 magnetisation of cobalt, nickel, magnetite, and (ASHWORTH), ii, 944.  
 magnetisation of nickel and (DE WAARD; PESCHARD), ii, 751.  
 magnetic, constitution of (GROSS), ii, 1184.  
 magneton numbers of, in complex salts (WELLO), ii, 943; (JACKSON), ii, 944.  
 electrolytic behaviour of (LIEBREICH and WIEDERHOLT), ii, 44.  
 critical potential in electron emission from (PETRY), ii, 1017.  
 quantitative deposition of, from oxalate electrolytes (FRÖLICH), ii, 604.  
 thermoelectric behaviour of, at its transition points (GOETZ), ii, 187.  
 atomic heat of (RODEBUSH and MICHALEK), ii, 949.  
 lattice constant of (BLAKE), ii, 844.  
 orientation of crystals of, on heating under strain (ELAM), ii, 946.  
 tensile strength of crystals of (EDWARDS and PFILL), ii, 946.  
 corrosion of (EVANS), ii, 687; (WHITNEY; SHIPLEY, McHAF-FIE, and CLARE), ii, 688.  
 tests on (BEENY), ii, 1068.  
 effect of metals on (UTIDA and SAITÔ), ii, 1069.  
 by salt solutions (EVANS), ii, 140.  
 composition of the rust of (STUMPER), ii, 702.  
 passivity of (RUSSELL), ii, 406.  
 pyrophoric phenomena in (SMITS and WALLACH), ii, 276.  
 as an oxidative catalyst (WARBURG), i, 471.  
 effect of alkaloids on the solution of, in hydrochloric acid (RANE and PRASAD), ii, 410.  
 and its alloys, action of dilute acids on (GIRARD), ii, 879.  
 displacement of alkali metals by (BLACKPILL and GRANDADAM), ii, 123.  
 and reversible dissociation equilibrium of water vapour and of carbon dioxide over (HORMANN), ii, 537.

**Iron**, action of, on copper (SIEBE; HANSON and FORD), ii, 317.  
 oxygen in (TRITTON and HANSON), ii, 316.  
 action of sodium chloride on (GIRARD), ii, 1192.  
 commercial, constitution of (WEVER), ii, 503.  
 ferrous, equilibrium of, with silver ions (TANANAËV), ii, 121.  
 physiological effects of zinc and (BERTRAND and NAKAMURA), i, 1114.  
 as oxygen carrier in respiration (ELLINGER), i, 1342; (WARBURG), i, 1481.  
 in blood in scurvy (MOURIGNAND, LEULIER, and MICHEL), i, 330.  
 from hæmoglobin, and its action with digestive ferments (LINTZEL; BARKAN), i, 1482.  
**Iron alloys**, electrolytic corrosion of (THORNTON and HARLE), ii, 303.  
 with carbon, temper-colours of (TAMMANN and SIEBEL), ii, 1169.  
 equilibria of (DAEVES), ii, 401.  
 ternary (V. VEGESACK), ii, 535.  
 with carbon and nickel (KASE), ii, 973.  
 with carbon and silicon (BECKER), ii, 973.  
 with carbon and titanium (TAMARU), ii, 787.  
 with cobalt and nickel, expansion coefficients of (HONDA and OKUBO), ii, 104.  
 with cobalt and with nickel (GRENET), ii, 973.  
 with copper and manganese (OSTERMANN), ii, 1050.  
 with nickel (DELORAINÉ), ii, 639.  
 magnetic properties of (YENSEN), ii, 372.  
 thermomagnetic properties of (PESCHARD), ii, 651.  
 effect of tension on magnetic properties of (BUCKLEY and MCKEEHAN), ii, 945.  
**Iron bases** (*iron aminines*):—  
 Aquopentamminiferrous sulphate (WEITZ and MÜLLER), ii, 318.  
**Iron compounds**, importance of, in nutrition (HART, STEENBOCK, ELVEHJEM, and WADDELL), i, 1854.  
 pharmacology of (SABBATANI), i, 196.  
**Iron salts**, catalysis of hydrogen peroxide by (SPITALSKY and PETIN), ii, 53.  
 action of, on fermentation (HODEL and NEUENSCHWANDER), i, 615.

**Iron carbonyls** (FREUNDLICH and MALCHOW), ii, 231.

oxide, catalytic properties of (BAUDISCH and WELO), ii, 881.

oxides (SIMON and SCHMIDT), ii, 534.

reduction of (HOFMANN), ii, 991.

**Ferric salts**, oxidation of iodides by (WAGNER), ii, 49.

reduction of, by thiosulphates (HOLLUTA and MARTINI), ii, 305, 702.

precipitation of, by ammonium sulphide (KŘEPELKA and PODROUZEK), ii, 703.

promotion by copper salts in the decomposition of hydrogen peroxide by (ROBERTSON), ii, 690.

detection of, with alloxantin (DENIGÈS), ii, 441.

determination of, in silicates (HACKL), ii, 1004.

chloride, effect of a magnetic field on the reduction of (PARKER and ARMES), ii, 683.

effect of neutral salts on the reaction of stannous chloride with (TIMOFEEV, MUCHIN, and GUREVITSCH), ii, 586.

reaction of potassium thiocyanate with (BAILEY; BAILEY and KIDD), ii, 422.

catalysis of the reaction of sodium thiosulphate with (HOLLUTA and MARTINI), ii, 215.

hydroxide, colloidal, preparation of solutions of (GAVRILOV), ii, 860; (STADNIKOV and GAVRILOV), ii, 861.

sols, coagulation of (GHOSH and DHAR), ii, 778.

and their mixtures with aluminium hydroxide (KÜHNEL and PAULI), ii, 776.

action of, on aqueous solutions of gelatin (WINTGEN and MEYER), ii, 524.

precipitation of, electrometrically (BRITTON), ii, 1204.

oxide, effect of temperature on hygroscopicity of (AARNIO), ii, 1157.

equilibrium of magnesia and (FORESTIER and CHAUDRON), ii, 1159.

catalytic activity of (WELO and BAUDISCH), ii, 1071.

hydrosols, electric transport in (PRIGGARI), ii, 129, 792.

sol-gel transformation of (FREUNDLICH and ROSENTHAL), ii, 967.

**Iron:—**

**Ferric oxide**, solid solutions of aluminium and chromic oxides in (FORESTIER and CHAUDRON), ii, 534.

reduction of, by hydrogen (BENTON and EMMETT), ii, 216; (KAMURA), ii, 981.

magnetic (ABRAHAM and PLANIOL), ii, 587; (CHEVALLIER), ii, 639; (SOSMAN and POSNJAK), ii, 944.

sulphate, action of alkalis on (KRAUSE), ii, 1192.

**Ferrous salts**, action of ammonia on aqueous solutions of (WEITZ and MÜLLER), ii, 317.

reaction of cuprous salts with (WELLS), ii, 148.

action of light on the reaction of iodine with (RIDEAL and WILLIAMS), ii, 416.

dissociation equilibria of nitric oxide compounds of (MANCHOT and HAUNSCHILD), ii, 298; (MANCHOT and LINCKE), ii, 317.

reduction of permanganates by (MÜLLER and MÖLLERING), ii, 305.

carbonate and hydroxide, ageing of (BAUDISCH and WELO), ii, 992.

chloride, ammoniate of (BILTZ and RAHLFS), ii, 1191.

hydroxide, solubility of, and its influence on corrosion (WHITMAN, RUSSELL, and DAVIES), ii, 505.

precipitation of, electrometrically (BRITTON), ii, 1203.

nitride (BERGSTROM), ii, 231.

oxide, magnetic form of (FERGUSON), ii, 846.

apparatus for determination of (MEYER), ii, 898.

selenide (MOSER and ATYNSKI), ii, 583.

sulphate, miscibility of ammonium sulphate and (ZWEIGLÓWNA), ii, 189.

reduction of chloric acid and its salts by (HARVEY), ii, 1197.

ammonium sulphate, magnetic properties of (FORX), ii, 346.

sulphide, colloidal, toxicity of (SABBATANI), i, 196.

telluride (BRUKL), ii, 895.

**Ferric acid**, and its salts (LOSANA), ii, 1088.

## Iron organic compounds:—

Ferroustetramminethiocyanate (BERGSTROM), ii, 231.

Chloroferrates of ammonium bases (REMY and ROTHE), ii, 1088.

## Iron:—

Cast iron, definition of (HONDA), ii, 378.

Steel, definition of (HONDA), ii, 378.  
martensitic structure of (SAUERWALD and JACKWIRTH), ii, 22.

secondary crystallisation of (SCHEIL), ii, 122.

recrystallisation of, after hot deformation (HANEMANN), ii, 1134.

specific volume of (ANDREW and HONEYMAN), ii, 278.

temper-brittleness of (GREAVES and JONES), ii, 487.

temper colours of (GALE), ii, 109.

corrosion of (EVANS), ii, 687; (ENOS), ii, 1068.

tests on (BENY), ii, 1068.

effect of metals on (UTIDA and SAITÔ), ii, 1069.

by salt solutions (EVANS), ii, 140.

effect of carbon and carbides in, on its properties (CAMPBELL and WHITNEY), ii, 274.

action of sodium chloride on (GIRARD), ii, 1192.

carbon, formation of martensite in (HONDA), ii, 972.

quenched carbon, structure of (ENLUND), ii, 486.

determination of chromium and vanadium in (KOLTHOFF and TOMIČEK), ii, 72.

## Iron detection, determination, and separation:—

detection of (NICHOLS and COOPER), ii, 715.

detection of, without nitric acid (LONGINESCU and PETRESCU), ii, 1206.

determination of, colorimetrically (WALKER), ii, 717.

determination of, gravimetrically (TANANAEV), ii, 603.

determination of, volumetrically (RUFF), ii, 71; (ASMUS), ii, 1206.

determination of, in presence of chromium and vanadium (KOLTHOFF and TOMIČEK), ii, 72.

determination of, in biological material (MURRAY), i, 183.

determination of, in tissues and in tumours (YABUSOE), i, 724.

determination of, in water (HOPKINS), ii, 1066.

## Iron detection, determination, and separation:—

ferric and ferrous, determination of, in magnetites (ADAM), ii, 717.

determination of oxygen in (ROONEY), ii, 327.

separation of, from copper and nickel (ARDAGH and BROUGHALL), ii, 603.

separation of, from manganese and magnesium and from phosphoric acid (MOSER, BRUKL, and VÉN), ii, 329.

separation of, from mercury (SPACU), ii, 1206.

separation of nickel and, in presence of chromium (ROUSSEAU), ii, 441.

separation of zirconium from (WENGER and MÜLLER), ii, 1207.

Iron ores, reduction of, by hydrogen (KAMURA), ii, 981.

analysis of (MCMILLAN and FERGUSON), ii, 441.

Iron wire, magnetic spectrum of (ARKADIEV), ii, 82.

effect of absorption of gas on resistance of (KLEINE), ii, 947.

Irradiation, biochemistry of (KROETZ), i, 178.

*Isaria virescens*, formation of pigments by (DANILOV), i, 1018.

Isatin, action of, and its  $\alpha$ -chloride on hydantoins (HILL and HENZE), i, 305.

condensation of, with rhodanic acids (HANN), i, 987.

mercuric derivative, and 5-bromo-, silver and benzoyl derivatives (HANTZSCH), i, 701.

Isatin, 4-chloro-5:7-diiodo- and 5:6:7-triiodo- (KALB and VOGEL), i, 161.

5:7-diiodo-, and its derivatives (KALB and BERRER), i, 160.

Isatin series, isomerism of (HELLER and FUCHS), i, 1166.

Isatin-*N*-chloroanilide (RUFE and GUGGENBUHL), i, 1100.

Isatinrhodamine (SEN and SIRCAR), i, 555.

Isatoic acid, 5:6:7-triiodo-, sodium derivative (KALB and VOGEL), i, 161.

Isatoid, and its silver derivative (HANTZSCH), i, 700.

Isatole, so-called (HANTZSCH), i, 700.

Isoagglutinins in dogs' blood (MCENERY, IVY, and PECHOUS), i, 1844.

Isoelectric point, theory of (KUHN), ii, 117.

Isomeric transformations (NAMETKIN and JARCEVA), i, 1081.

Isomerides, molecular diameters and volumes of (WÖHLISCH), ii, 269.

solubility of (JOHNSTON; ANDREWS, KOHMAN, and JOHNSTON), ii, 852.

**Isomerism**, influence of the solvent on (DIMROTH), ii, 36; (VIXSEBOXSE), ii, 396.  
 and polymorphism (PFEIFFER, KALCK-BRENNER, and BEHR), i, 547.  
 dynamic (BURGESS and LOWRY), i, 46; (FAULKNER and LOWRY), ii, 632; (LOWRY; LOWRY and RICHARDS), i, 886.  
 electron (SWINNE), ii, 922.  
 geometric (SUGDEN and WHITTAKER), ii, 937.  
**Isomorphism** (WINCHELL), ii, 1122.  
**Isotopes**, band spectra of (MULLIKEN), ii, 833.  
 and mass spectra of elements (ASTON), ii, 618.  
 mass ratio of (JAEGER and DIJKSTRA), ii, 83.  
 in relation to periodic classification of elements (SCHTSCHUKAREV), ii, 462.  
 separation of (KENDALL and WHITE), ii, 83.  
**Itaconic acid**, esters, action of ammonia on (STOSIUS and PHILIPPI), i, 892.

## J.

**Jaborandi leaf oil**, constituents of (SCHIMMEL & Co.), i, 417.  
**Jasmine**, Spanish. See *Jasminum grandiflorum*.  
*Jasminum grandiflorum*, indole in flowers of (CERIGHELLI), i, 621.  
**Jatrochizine**, constitution of (SPÁTH and DUSCHINSKY), i, 1313.  
**Jaundice**, determination of phenol-sulphonaphthalein in urine in (ABRAMSON), i, 329.  
**Jellies** (v. WEIMARN), ii, 390.  
*Juglans regia* (walnut), phosphorus compounds in (BIELECKI and SZTENCZEL), i, 215.  
**Juline chloroaurate** (REINWEIN), i, 189.  
**Juniper oil**, constituents of (PALAZZO and ALINARI), i, 565.  
*Juniperus communis*, constituents of oil from (SIMONSEN), i, 565.  
**Jute**, cellulose of (LEHNE and SCHEPMANN), i, 518.

## K.

**Kachi-grass oil** (RAO and SUDBOROUGH), i, 1164.  
**Kaempferide trimethyl ether** (TASAKI), i, 1444.  
**Kaki-fruit**, ripening of (KOMATSU and ISHIMASA), i, 759.

**Kakishibu** (KOMATSU, MATSUNAMI, and ISHIMASA), i, 759; (KOMATSU and MATSUNAMI), i, 950.  
**Kamala**, Indian, constitution of (DUTT), i, 1296.  
**Kaolinite** (*kaolin*), structure of (DOMINIKIEWICZ), ii, 1036.  
 action of heat on (MELLOR and SCOTT), ii, 698.  
 colloidal (POPE and HAINES), ii, 1152.  
 sedimentation of suspensions of (KERMACK and WILLIAMSON), ii, 523.  
 dehydration of (SAMOILOV), ii, 698.  
**Kerasin** in the spleen in Gaucher's disease (LIEB), i, 189.  
**Keratin**, action of alkalis on (BERGMANN and STATHER), i, 847.  
 bromination of (STARY), i, 847.  
**Kerosene**, from kubiki oil, naphthenic acids from (TANAKA and NAGAI), i, 252.  
**Kerr effect** in gases (SZIVESSY), ii, 15.  
**Keten**, preparation of (HURD and TALLYN), i, 785, 885.  
 polymeride of (STAUDINGER and STIRNEMANN), i, 787.  
 action of, on hydroxybenzoic acids (VAN ALPHEN), i, 1149.  
**Ketens** (STAUDINGER), i, 786.  
 ultra-violet absorption spectra of, and their dimerides (LARDY), ii, 87, 181.  
 autoxidation of (STAUDINGER, DYCKERHOFF, KLEVER, and RUZICKA), i, 933.  
 action of, on hydrazine derivatives (VAN ALPHEN), i, 80.  
**Ketipinic acid**. See *Diketoadipic acid*.  
**1-Keto-6-acetamido-4-anilino-2-oxythiophenylidene-1:2-dihydronaphthalene** (SANDER), i, 982.  
**Keto-alcohol**,  $C_{10}H_{16}O_2$ , and its derivatives, from chenopodium oil (HENRY and PAGET), i, 1163.  
**1-Keto-4-anilino-2-indoxenyl-1:2-dihydronaphthalene** (SANDER), i, 982.  
**4-Keto-2-anisyl-1:4-dihydropyrimidine-5-cyano-** (MITTER and PALIT), i, 1320.  
**2-Keto-2-anisyl-1:4-dihydropyrimidine-5-carboxylic acid**, ethyl ester (MITTER and PALIT), i, 1320.  
 **$\beta$ -Keto-bases**, preparation of (MANNICH), i, 374.  
**1-Keto-2-benzylidenecetahydroanthracene** (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 129.  
*trans-2-Ketodecahydronaphthalene-3-carboxylic acid*, ethyl ester (HÜCKEL and GOTH), i, 402.  
**Keto-7-demethylo- $\psi$ -corydaline** (HAWORTH and PERKIN), i, 971.

- 3-Keto-4:5:4':5'-dibenz-2:3'-dicoumaran (FRIES and PUSCH), i, 569.
- 2-Keto-2:3-dihydropyriminazole, and 5:7-dibromo-, and 3-oximino-, and their salts (TSCHITSCHIBABIN), i, 158.
- $\alpha$ -Keto- $\beta\beta$ -dimethylglutaric acid, ethyl ester (ROTHSTEIN, STEVENSON, and THORPE), i, 884.
- $\alpha$ -Keto- $\beta\beta$ -dimethylpentane- $\alpha\gamma$ -dicarboxylic acid, and its diethyl ester (ROTHSTEIN, STEVENSON, and THORPE), i, 884.
- 2-Keto-3:6-di-*o*-nitrophenyl-1:2-dihydro-1:4-diazine (HELLER and SPIELMEYER), i, 888.
- 2-Keto-3:4-diphenyl-2:3-dihydro-1:3-thiazoleacetylhydrazone, and its hydrobromide (BOSE), i, 1465.
- 2-Keto-3:4-diphenyl-3:3-dihydro-1:3-thiazoleanisylidenehydrazone (BOSE), i, 1465.
- 2-Keto-3:4-diphenyl-2:3-dihydro-1:3-thiazolebenzylidenehydrazone (BOSE), i, 1465.
- 2-Keto-3:4-diphenyl-2:3-dihydro-1:3-thiazolehydrazone, and its derivatives (BOSE), i, 1465.
- 2-Keto-3:4-diphenyl-2:3-dihydro-1:3-thiazoleisopropylidenehydrazone (BOSE), i, 1465.
- 2-Keto-1:5-diphenyl-4-methylpyrrolidine-5-cyano-, and its 3-carboxylic acid, ethyl ester (HIGGINBOTHAM, LAPWORTH, and SIMPSON), i, 35.
- 2-Keto-1:5-diphenyl-4-methylpyrrolidine-5-carboxylamide (HIGGINBOTHAM, LAPWORTH, and SIMPSON), i, 35.
- 2-Keto-4:6-diphenyl-3-*p*-nitrophenyl-tetrahydropyridine (ALLEN), i, 964.
- 3-Keto-2:2-diphenyltetrahydroquinoxaline-4-carboxylic acid, ethyl ester, and its acetyl derivative (INGOLD and WEAVER), i, 580.
- $\beta$ -Keto-esters, structure of enolic forms of (SIDGWICK), i, 630.
- 1-Keto-2-ethylhydrindene, and its semicarbazone (SPRIGHT, STEVENSON, and THORPE), i, 32.
- $\delta$ -Ketoheptdiethylamide, and its semicarbazone (BLAISE and MONTAGNE), i, 633.
- $\delta$ - and  $\gamma$ -Ketoheptoic acids, semicarbazones of (CLUTTERBUCK and RAPER), i, 882.
- 1-Ketohydrindene-3-acetic acid, and its semicarbazone (SPRIGHT, STEVENSON, and THORPE), i, 32.
- 1-Ketohydrindene-3-carboxylic acid, and its derivatives (SPRIGHT, STEVENSON, and THORPE), i, 32.
- 1-Keto-2-ethylhydrazine (GOEBEL), i, 1038.
- Ketohydroxymethylsuccinic acid (GOEBEL), i, 1038.
- 1:4-*endo*-Keto-2-keto-3:3-diphenyltetrahydroquinoxaline, and its chloro-derivatives (INGOLD and WEAVER), i, 580.
- 3-Keto- $\Delta^1$ -*p*-menthene oxide (KÖTZ and HOFFMANN), i, 911.
- 2-Keto-7-methyldihydropyriminazole, salts of (TSCHITSCHIBABIN), i, 159.
- 4-Keto-2- $\beta$ -naphthyl-1:4-dihydropyrimidine, 5-cyano- (MITTER and PALIT), i, 1320.
- 4-Keto-2-naphthyl-1:4-dihydropyrimidine-5-carboxylic acid, ethyl ester (MITTER and PALIT), i, 1320.
- Ketone,  $C_9H_{14}O$ , and its semicarbazone (HENRY and PAGET), i, 1163.
- Ketones, absorption spectra of (LECOMTE; PURVIS), ii, 627; (PLOTNIKOV), ii, 837; (LANGEDIJK), ii, 1116. and their alcoholic solutions (BÖSEKEN, COHEN, and LANGEDIJK), i, 408.
- ultra-red absorption spectra of (BONINO), ii, 838.
- decomposition of (HURD and TALLYN), i, 885.
- reduction of (MEERWEIN and SCHMIDT), i, 1239.
- interchange of groups between alcohols and (VERLEY), i, 1034.
- preparation of acetylenic hydrocarbons from (BOURGUEL), i, 364.
- action of, with aluminium organic compounds (LEONE and BRAICOVIC), i, 677.
- and their semicarbazones from naphthenic acids (ZELINSKI and RJACHINA), i, 39.
- excretion of, after extirpation of the pancreas (BIERRY and RATHERY), i, 856.
- cyclic, preparation of (RIEDEL), i, 407.
- condensations of (HILL and HENZE), i, 305.
- fatty-aromatic, condensation of 2-aminopyridine with (SCHMID and BANGLER), i, 1459.
- saturated aliphatic, X-ray investigation of (SAVILLE and SHEARER), ii, 366.
- reaction of halogens with (RICE and FRYLING), ii, 556.
- unsaturated, absorption spectra and halochromism of (SCHEIBE, RÖSSLER, and BACKENKÖHLER), ii, 352.
- $\alpha$ -unsaturated phenolic (VORLÄNDER, HIERMESCH, SCHOENEMANN, SCHADE, and KUNZE), i, 267.
- determination of, by action of sulphites on (ROMEO and D'AMICO), i, 1380.

- Ketonic acids, unsaturated** (BOGERT and RITTER), i, 255, 816.
- $\gamma$ - and  $\delta$ -Ketonic acids, and their esters, thermal decomposition of (WINDAUS and BOHNE), i, 552.
- $\delta$ -Keto-nitriles, reactions of (ALLEN), i, 963.
- $\beta$ -Keto- $\alpha$ -o-nitrophenylpropane,  $\alpha$ -oximino-, and its derivatives (NEBER, HARTUNG, and RUOFF), i, 1073.
- 4-Keto- $\delta$ -octahydroanthracene, derivatives of (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 129.
- 1-Keto- $\delta$ -octahydrophenanthrene, and its derivatives (RIEDEL), i, 407.
- Keto-octahydrophenanthrenes, and their derivatives (SCHROETER, VAN HULLE, and MÜLLER), i, 130.
- $\delta$ - and  $\gamma$ -Keto-octolic acids, semicarbazones of (CLUTTERBUCK and RAPER), i, 882.
- 4-Keto-oxythionaphthylidenedihydronaphthalenes, amino- and hydroxy- (FRIEDLÄNDER), i, 957.
- $\gamma$ -Ketopalmitic acid, oxime of (G. M. and R. ROBINSON), i, 355.
- $\gamma$ -Ketopentadienes, photodimerides of derivatives of (STOBBE, FÄRBER, and RAU), i, 1282.
- $\gamma$ -Ketopentadienedicarboxylic acid, methyl ester, dimeride of (STOBBE, FÄRBER, and RAU), i, 1283.
- 4-Keto-6-phenyldihydropyrimidine (SEIDE), i, 437.
- 4-Keto-2-phenyl-1:4-dihydropyrimidine, 5-cyano-, and its derivatives (MITTER and PALIT), i, 1319.
- 2-Keto-4-phenyl-2:3-dihydro-1:3-thiazole, hydrazones of (BOSE), i, 167.
- 1-Keto-2-phenyl-3:5-dimethyl-1:2-dihydro-2:4:3-naphthaisotriazine (GULAND and ROBINSON), i, 1187.
- 4-Keto-6-phenyl-1:2-divinylenedihydropyrimidine, and its salts (SEIDE), i, 437.
- 2-Keto-3-phenyl-5-methylcoumaranyl-3-acetic acid, and its ethyl ester (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
- 2-Keto-4-phenyl-3-methyl-2:3-dihydro-1:3-thiazoleanisylidenehydrazone, and its hydrobromide (BOSE), i, 1466.
- 2-Keto-4-phenyl-3-methyl-2:3-dihydro-1:3-thiazoleisopropylidenehydrazone, and its hydrobromide (BOSE), i, 1466.
- 2-Keto-4-phenyl-3- $\alpha$ -naphthyl-2:3-dihydro-1:3-thiazolehydrazone, and its hydrobromide (BOSE), i, 1466.
- 2-Keto-4-phenyl-3-o-tolyl-2:3-dihydro-1:3-thiazolehydrazone, and its hydrobromide (BOSE), i, 1466.
- $\alpha$ -Ketopimelic acid, and its derivatives (ADICKES), i, 230.
- Ketopiperazines, action of alkalis on (LEVENE and PFALTZ), i, 1474.
- 3-Keto-4:5-pyrido-2:3-dihydrothiophen, and its phenylhydrazone, and 2:2-di-bromo-, and its salts (KOENIGS and GEISSLER), i, 167.
- 2-Ketopyrrolidine-4-carbamide (STOSIUS and PHILIPPI), i, 892.
- $\delta$ -Ketosebacic acid, semicarbazone of (HÜCKEL and BRINKMANN), i, 259.
- Ketosis (WIGGLESWORTH), i, 191.
- $\alpha$ -Ketosuberic acid, and its derivatives (ADICKES), i, 230.
- 3-Keto-1:2:3:4-tetrahydro-1:2:4-benzotriazine (GUHA and RAY), i, 1462.
- 1-Keto-1:2:3:4-tetrahydronaphthalene, transformations of (SCHROETER, ZADEK, and HOFFMANN), i, 677.
- 1-Ketotetrahydronaphthalene,  $\beta$ -bromo- (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1306.
- 2-hydroxy-, and its acetyl derivative (STRAUS, BERNOULLY, and MAUTNER), i, 1155.
- 2-nitro-, and 2-oximino-, and their potassium salts (STRAUS and EK-HARD), i, 1139.
- Ketotetrahydronaphthalenes, nitro-, and their semicarbazones (RIEDEL), i, 407.
- 4-Keto- $\delta$ -tetrahydrophenanthrene, derivatives of (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 129.
- 5-Keto-1:2:3:4-tetrahydroisotetrazole, 5-thio- (GUHA and DE), i, 600.
- 3-Keto-4:6:4':6'-tetramethyl-2:3-dihydro-2:3'-dicoumaran (FRIES and BARTENS), i, 568.
- $\beta$ -Keto- $\alpha$ - $\gamma$ -tetramethylglutaric anhydride (STAUDINGER, FELIX, and HARDER), i, 786.
- $\beta$ -Keto- $\gamma$ -thiol- $\alpha$ -benzoyl- $\alpha$ - $\gamma$ -triphenyl-dithiobutanoic acid,  $\gamma$ -thiolactone of (MEYER), i, 424.
- 4-Keto-2-tolyl-1:4-dihydropyrimidine, 5-cyano- (MITTER and PALIT), i, 1320.
- 4-Keto-2:3:3-triphenyldimethylen-1:2-di-imine-1-carboxylic acid, ethyl ester (INGOLD and WEAVER), i, 580.
- Ketoximes, acid nature of (PFEIFFER, ARMERUSTER, BACKES, and OBERLIN), i, 270; (PFEIFFER), i, 677.
- Kidneys, ratio of alkali salts in blood in disease of (RABINOVITCH), i, 462.
- isolated, effect of inorganic salts on the secretion of (EICHOLTZ and STARLING), i, 860.
- Kinetics of chemical reactions (TOLMAN), ii, 799.

Kinetic salt effect, secondary (BRÖNSTED and KING), ii, 1171.  
 Konyaku sols, action of alkalis on (DOKAN), ii, 967.  
 Kubiki oil, naphthenic acids from (TANAKA and NAGAI), i, 252.  
 Kynurenic acid, formation of, in the animal body (MATSUOKA, TAKEMURA, and YOSHIMATSU), i, 731.

## L.

Laboratory apparatus (WIGGERS), ii, 319; (STEINKOPF, OHSE, and BUCHHEIM), ii, 590.  
 Laccase (FLEURY), i, 471, 614.  
 action of hydrocyanic acid on (FLEURY), i, 1360.  
 Lactacidogen, formation of, in muscle (EMMICH and LANGE; EMBDEN, KAHLERT, and LANGE; ABRAHAM and KAHN), i, 728; (DEUTICKE; EMBDEN and ZIMMERMANN), i, 729.  
 Lactarinic acid, synthesis of (G. M. and R. ROBINSON), i, 354.  
 Lactation, effect of ultra-violet light on mineral metabolism in (ORR, MAGEE, and HENDERSON), i, 1210.  
 Lactic acid (*i-ethylidenelactic acid*;  *$\alpha$ -hydroxypropionic acid*), formation of, in muscular exercise (FURUSAWA, HILL, LONG, and LUPTON), i, 92; (HENTSCHER), i, 728; (FURUSAWA), i, 849; (LYTHGOE and PEREIRA; PEREIRA), i, 1341.  
 and its anhydrides, equilibrium of, in aqueous solution (DIETZEL and KRUG), i, 1036.  
 and its calcium salt, bromination of, in presence of light (GHOSH and BASU), i, 1234.  
 oxidation of, in muscle (v. SZENT-GYÖRGYI), i, 708.  
 metabolism of. See Metabolism.  
 destruction of, by yeast (MYRBÄCK and EVERITT), i, 105.  
 in arthritis and rheumatism (CAJORI, CROUTER, and PEMBERTON), i, 328.  
 in blood at high altitudes (LAQUER), i, 324.  
 effect of aliphatic compounds on (KNOOP and JOST), i, 180.  
 effect of insulin on (COLLAZO and LEWICKI), i, 870.  
 and tissues, effect of insulin and adrenaline on (CORI), i, 753; (BAST and RIDOUT), i, 754.  
 in urine after muscular exercise (LILJESTRAND and WILSON), i, 1115.  
 estimation of, colorimetrically (EKHARL), ii, 1907; (KUTTER), ii, 1219.  
 Lactic acid (*i-ethylidenelactic acid*;  *$\alpha$ -hydroxypropionic acid*), detection of, in fruit juices (BORNTRÄGER), ii, 1007.  
 determination of, in animal organs (HIRSCH-KAUFFMANN), i, 96; (EMBDEN; MEYERHOF), i, 719.  
*d*-Lactic acid, transformation of, into *l*-alanine (FREUDENBERG and HUBER), i, 229.  
 Lactoisocitric acid (NELSON), i, 619.  
 Lactone,  $C_9H_{14}O_3$ , and its derivatives, from *Alstonia* bark (GOODSON and HENRY), i, 1166.  
 Lactones, catalysis by acids of the formation of (TAYLOR and CLOSE), ii, 1070.  
 Lactose (*milk-sugar*) (WHITTIER), i, 792.  
 origin of, in cows (CAMPUS), i, 327.  
 bromo-, chloro-, and iodo-acetyl derivatives of (HUDSON and KUNZ), i, 1043.  
 determination of (BIERMAN and DOAN), ii, 245.  
 Lævulinic acid,  $\alpha$ -alkyl derivatives of (GAULT and SALOMON), i, 115.  
 esters, hydrolysis of (SKRAHAL, PFAFF, and AIROLDI), ii, 139.  
 Lævulinic acid, chloro-oximino-, and its ethyl ester (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132.  
 Lævulosans in plants (COLIN), i, 618.  
 Lævulose (*d-fructose*; *fruit-sugar*), solution volume and refraction constants of (RIEBER, ESP, and BERNER), i, 635.  
 effect of phosphates on rotation of (v. EULER and NILSSON), i, 1042.  
 Lake water. See under Water.  
 Lamellibranchs, intestines of. See Intestines.  
*Laminaria flexicaulis*, combustion analysis of (LELIEVRE and MÈNAGER), i, 619.  
 Lamps, mercury, energy distribution in (FRANKLIN, MADDISON, and REEVE), ii, 809.  
 gold in (RETSCHINSKY), ii, 465.  
 constricted mercury arc, for photochemistry (FORBES and HARRISON), ii, 1194.  
 quartz mercury (REEVE), ii, 234.  
 Landolt reaction (EGGERT), ii, 52; (EGGERT and PFEFFERMANN), ii, 407.  
*Lantana camara*, constituents of oil from leaves of (MOUDGILL), i, 565.  
 Lanthanum, spectrum of (GOUDESMIT), ii, 464.  
 arc spectrum of (PINA DE RUBIES), ii, 612.  
 Lanthanum alloys with cerium, adsorption of hydrogen by (SIEVERTS and ROELL), ii, 854.

- Lanthanum**, potassium chromates (CAROBBE), ii, 315.  
 copper nitrate (CAROBBE), ii, 145.  
 potassium sulphates (ZAMBONINI and CAROBBE), ii, 222.  
 thallous sulphates (ZAMBONINI and CAROBBE), ii, 579.
- Larkspur**. See *Delphinium consolida*.
- Lathyrism** (ANDERSON, HOWARD, and SIMONSEN), i, 1000.
- Laudanidine** (SPÄTH and BERNHAUER), i, 294.
- l-Laudanosine** (SPÄTH and BERNHAUER), i, 294.
- Lane effect**, quantum theory of (ORNSTEIN), ii, 733.
- Lauric acid**, calcium salt (KLIMONE, v. MOLTINI, and BENEDIK), i, 506.  
 thallous salt (HOLDE and TAKEHARA), i, 1233.
- 3-hydroxybenzaldehyde-2-mercuric and 4-hydroxy-tert.-butylbenzene-dimercuric esters** (WELLCOME FOUNDATION, LTD., HENRY, and SHARP), i, 1154.
- Lead**, absorption spectrum of the vapour of (NARAYAN and RAO), ii, 927.  
 arc spectrum of (SPONER), ii, 454 ; (MCLENNAN, YOUNG, and MCCLAY), ii, 455 ; (GIESELER and GROTRIAN), ii, 1103.  
 ultra-violet absorption spectrum of (ZUMSTEIN), ii, 914.  
*X-ray* absorption coefficient of (WARBURTON and RICHTMYER), ii, 1103.  
 isotopes of (BRENNEN), ii, 174, 1109 ; (PERRETTE), ii, 646.  
 in Norwegian celestite, atomic weight of (GLEDITSCH, DORENFELDT, and BERG), ii, 732.  
 band spectra of (BIELER), ii, 732.  
 vapour pressure and entropy of (RODEBUSH and DIXON), ii, 492.  
 adsorption of, by platinum (MAXTED), ii, 384.  
 containing radium- $\alpha$  for the preparation of formaldehyde (STOLFI), ii, 1111.  
 effect of colloids in the displacement of, by zinc (GRAY), ii, 578.  
 possible transformation of, into thallium (RUSSELL), ii, 924.
- Lead alloys** with antimony and zinc (TAMMANN and DAHL), ii, 535.  
 with bismuth and cadmium or tin, hardness of (DI CAPUA), ii, 1051.  
 with cadmium and with sodium, electrolysis of (KREMANN, KIENZL, and MARKL), ii, 132.  
 with cadmium and thallium (DI CAPUA), ii, 737.
- Lead alloys** with mercury, electrolysis of (KREMANN, KAPAUN, and BUDAN), ii, 313.  
 with silver, electrolysis of (KREMANN and BENDA), ii, 679.
- Lead compounds**, condition of, in the organism (SCREMIN), i, 465.
- Lead bromate** (GÜNZEL and MARCUS), ii, 1086.  
 carbonate, heat of formation of (MARSHALL and BRUŽS), ii, 1040.  
 dissociation of (CENTNERSZWER, FALK, and AWERBUCH), ii, 400.  
 chloride, solubility of, in acetic acid (HERZ and MARTIN), ii, 283.  
 solubility of, in chloride solutions (KENDALL and SLOAN), ii, 1052.  
 chromate, adsorption of ions by (MUKHERJEE and RAY), ii, 385.  
 hydroxide, equilibrium of sodium hydroxide, plumbite, and (MÜLLER, REISSMANN, and BALLIN), ii, 125.  
 precipitation of, electrometrically (BRITTON), ii, 1204.
- iodide, action of, with zinc sulphate (STOFFELLA), ii, 1064.
- nitrate, activity coefficient of aqueous solutions of (RANDALL and VANSELOW), ii, 33.  
 ageing of dilute solutions of (BERNHARDT), ii, 1003.
- nitrite (THIEL and STOLL), ii, 419.
- suboxide (VAN ARKEL), ii, 815.
- monoxide, structure of (DICKINSON and FRIAU), ii, 13.  
 additive compounds of, with lead salts of nitro compounds (AKTIEN-GESELLSCHAFT LIGNOSE), i, 1145.
- dioxide, crystal structure of (FERRARI), ii, 1125.  
 colloidal, preparation of, from lead tetra-acetate (GUTHIER and MEYER), ii, 290.  
 solubility of, in water (REMY and KUHLMANN), ii, 119.
- selenide (MOSER and ATYNSKI), ii, 583.
- sulphide, equilibria in roasting of (SCHENCK and BORKENSTEIN), ii, 419 ; (SCHENCK), ii, 1160.  
 equilibrium of thallous sulphide and (CANNERY and FERNANDES), ii, 887.
- disulphide, attempted preparation of (STĚŘBA-BÖHM and AUERSPERGROVA), ii, 699.
- sulphobismuthite, volcanic (ZAMBONINI, DE FIORE, and CAROBBE), ii, 709.

- Lead organic compounds** (CALINGAERT), i, 798.  
 diacetato-diplumbo-bromate (GÜNZEL and MARCUS), ii, 1086.  
 di-*m*-nitrophenyl dinitrate (VORLÄNDER), i, 1255.  
 di- and tri-phenyl methyls, *cyclohexyls*, and *xylyls* (KRAUSE and SCHLÖTTIG), i, 449.  
 resins (COFFIGNIER), i, 1294; (UZAC), i, 1295.  
 tetraethyl, preparation of (MEYER), i, 893.
- Lead detection, determination, and separation:—**  
 detection of (KOLTHOFF), ii, 1095.  
 determination of (RICHARDS; SCOTT), ii, 903.  
 determination of, electrolytically, in presence of copper (BILTZ), ii, 715.  
 determination of, in animal tissues (BERNHARDT), ii, 1003; (NAKASEKO and NAKANO), ii, 1205.  
 separation of antimony, bismuth, and copper from (LASSIEUR), ii, 159.  
 separation of antimony, copper, tin, and (LASSIEUR), ii, 328.  
 separation of, from bismuth (FEIGL and ORDELT), ii, 442.
- Lead accumulator.** See Accumulator.  
**Lead cathodes.** See Cathodes.
- Leaves, carbohydrates in, in relation to water content** (HORN), i, 1121.  
 effect of light on the growth and formation of chlorophyll in (PALLADIN), i, 1518.  
 invertase in (BLAGOVESCHENSKI and SOSSIEDOV), i, 1007.  
 peptase in (BLAGOVESCHENSKI and BIELOZEVSKI), i, 1009.  
 autumn, effect of light on decomposition of chlorophyll in (COMBES), i, 1120.  
 chlorotic and green, mineral matter in (COLIN and GRANDSIRE), i, 1123.  
 etiolated, effect of light on growth of (PALLADIN), i, 1517.
- Lecithiburin** (PONCE), i, 97.  
**Lecithin, synthesis of, in the organism** (ECKSTEIN), i, 458.  
 natural crystalline (ESCHER), i, 1232.  
 spontaneous decomposition of (KATO and SHINODA), i, 773.  
 in fatty oils (BOEDTKER), i, 1114.  
 compounds of, with bile acids and their salts (BORRINGER SOHN), i, 824.  
 and cholesterol in relation to cell membranes (CORRAN and LEWIS), i, 198.  
 serological differentiation of cholesterol and (SACHS and KLOPSTOCK), i, 1436.
- Lecithin, determination of, in blood** (GRIGAUT), i, 453.  
**Lecithins, synthetic** (LEVENE and ROLF), i, 92.  
**Lecithins, bromo-** (LEVENE and ROLF), i, 1520.  
**Lecture experiments to illustrate catalysis and ionisation** (KOLTHOFF), ii, 819.  
**Lemons, insulin-like substances in** (FISHER and McKINLEY), i, 1016.  
 See also *Cortex limonis*.  
**Lemon juice, effects of orange juice and of, on calcification** (KORENCHESKY and CARR), i, 211.  
 antiscorbutic factor of (ZILVA), i, 1220; (LIOTTA), i, 1365.  
**Lemon oil, new constituent of** (ROMEO), i, 1293.
- Lepidine, 2-hydroxy-, condensation of, with aromatic aldehydes** (TRÖGER and DUNKER), i, 432.
- Leprosy** (WRENSHALL and DEAN; DEAN, WRENSHALL, and FUJIMOTO), i, 1414.
- Leucine, esters, hydrolysis of, by pancreatic enzymes** (RONA and SPEDDEL), i, 103.  
 ethyl esters of its campholyl and chloroacetyl derivatives, and its amide, acetyl derivative (GRÄNACHER), i, 594.
- l*-Leucine, naturally-occurring, configuration of** (KARRER, JÄGGI, and TAKAHASHI), i, 1046.
- Leverrierite, schists formed of** (CORBETT), ii, 997.
- Lichenase, saccharification of cellulose by** (KARRER), i, 118.
- Lichenin, constitution of** (PRINGSHEIM, KNOLL, and KASTON), i, 1385.  
 Röntgen spectra of cellulose and (HERZOG and GONELL), i, 371.
- iso*Lichenin** (KARRER and JOOS), i, 1028; (PRINGSHEIM), i, 1029; (KARRER), i, 1370.
- Lichosan, and its triacetate** (PRINGSHEIM, KNOLL, and KASTON), i, 1385.
- Lichotriose** (KARRER and LIER), i, 793.
- Liesegang's rings, theory of** (OSTWALD), ii, 530; (DHAR and CHATTERJI), ii, 865.  
 formation of (DHAR and CHATTERJI; v. WEIMARN), ii, 959.  
 phenomena of (STEOPOE), ii, 1158.  
 in gelatin gels (SCOTT-BLAIN), ii, 519.
- Light, absorption of, by fluorescent substances** (PIENKOVSKI and JABLONSKI), ii, 1031.  
 absorption of, by electrolytes (v. HALBAN), ii, 1083.

- Light**, diffusion of, by active and inactive molecules (DE MALLEMANN), ii, 1080.  
 in liquids (ROCARD), ii, 265.  
 by methane and its homologues (CABANNES and GAUZIT), ii, 1080.  
 scattering of, in mixtures of air and carbon dioxide (BANERJI), ii, 1118.  
 by liquids (RAMAN and RAMDAS), ii, 952, 1046; (KRISHNAN), ii, 1030.  
 by salt solutions (SWEITZER), ii, 512.  
 chemical action of (JOHN), i, 1258.  
 biological action of (HARRIS), i, 1021.  
 oxidation in (ECKERT), i, 413.  
 action of, on dibasic acids (VOLMAR), ii, 575.  
 influence of, on enzymes (PINCUSSEN), i, 468; (PINCUSSEN and KLISIUNIS), i, 469.  
 fluorescent, absorption of, by the emitting substance (DUSEBERG), ii, 262.  
 polarised, photochemical action of (BALY and SEMMENS), i, 12.  
 in organic vapours (GANESAN), ii, 643.  
 ultra-violet, measurement of (WEBSTER, HILL, and EIDINOV), i, 750.  
 irradiation by (HESS, WEINSTOCK, and HELMAN; HESS and WEINSTOCK), i, 750.  
 growth-promoting properties of air irradiated by (NELSON and STEENBOCK), i, 484.  
 absorption of, in dilute solutions (GRIEVESON), ii, 472.  
 absorption of, by organic compounds (KEPLANKA and MARCHLEWSKI; DE LÁSZLÓ), ii, 179.  
 quantity required to develop a grain of silver bromide (HELMICK), ii, 143.  
 action of, on dyes and textiles (HEERMANN), ii, 144.  
 action of, on oils and green vegetables (HESS and WEINSTOCK), i, 212.  
 action of, on vitamins (ŠPINKA), i, 212.  
 action of, on alcoholic fermentation (ROMOLO and REMO DE FAZI), i, 475.  
 germicidal action of (COBLENTZ and FULTON), i, 616.  
 effect of, on growth and calcification of rats (HUME and SMITH), i, 211.  
**Lignin** (KÜRSCHNER), i, 1387.  
 chemistry of (POWELL and WHITTAKER), i, 372.  
**Lignin**, sublimation of (KÜRSCHNER), i, 890.  
 degradation of, by fungi (WEHMER), i, 521.  
 pine (KLASON), i, 371, 1246.  
 determination of (SCHWALBE), i, 643.  
 α-Lignin, homogeneity of (HÄGGLUND), i, 1026.  
 aldehyde structure of (HÄGGLUND), i, 643.  
**Lignite**, constituents of (CIUSA and GALIZZI), i, 1045.  
**Lignoceric acid** from arachis oil (HEIDUSCHKA and PYRIKI), i, 229.  
**Ligulin**, and its salts (PFAU), i, 572.  
**Lilium**, phytosterol from bulb scales (MIRANDE), i, 872.  
**Lilium candidum**, optical properties of plastids and phytosterol from (MIRANDE), i, 618.  
**Limestone**, hydrogen sulphide in (NENADKEVITSCH; VERNADSKI), ii, 997.  
**Limit dextrin I**. See Dextrin.  
**Limonene**, electrical birefringence of (DE MALLEMAN), ii, 642.  
 catalytic transformation of (ZELINSKI), i, 146.  
 action of hydrogen peroxide on (SWORD), i, 1163.  
**Linamarase** (ROSENTHALER), i, 1008.  
**Linoleic acid**, and its anhydride (HOLDE and GENTNER), i, 882.  
**Linolenic acid**, calcium salt (KLIMONE, v. MOLTINI, and BENEDIK), i, 506.  
**Linoxyn** (EIBNER and RIED), i, 1377.  
**Linseed oil**, colloid chemistry of (VOLLMANN), ii, 517.  
 catalytic oxidation of (SLANSKY), i, 114, 115.  
**Lipase** (CAPPELLI), i, 725.  
 from papain (SANDBERG and BRAND), i, 1009.  
 action of, from rats of various ages (FALK, NOYES, and SUGIURA), i, 1360.  
 activity of, in tissues of different animals (NOYES and FALK; FALK, NOYES, and SUGIURA), i, 471.  
 gastric (WILLSTÄTTER, HAUROWITZ, and MEMMEN), i, 201.  
 favourable hydrogen-ion concentration for (WILLSTÄTTER, HAUROWITZ, and PETROU), i, 742.  
 pancreatic, conditions for action of (PLATT and DAWSON), i, 1506.  
 from the thyroid (HERZFELD and ENGEL), i, 201.  
 determination of, stalagmometrically (DEMUTH), i, 103.  
 determination of, in body fluids and tissues (RONA and LASNITZKI), i, 471.

- Lipases**, specificity of (WILLSTÄTTER), i, 1008.
- Lipins**, action of paraldehyde on (COOPER), i, 91.  
in liver (SACCHETTO), i, 1357.
- Lipoids** (FRÄNKEL and KARPFFEN), i, 720.  
effect of, on osmosis in gels (YUMIKURA; TRAUBE and YUMIKURA), i, 735.  
extraction and determination of, in cereals (RASK and PHELPS), ii, 448.  
adsorption by mixtures of (SCHÄFER), ii, 1149.  
protection of colloids by (BECK), ii, 527.  
colloidal, interaction of colloidal fats and (EICHHOLTZ), i, 199.  
determination of, in blood-serum (MINOVICI and ILIESCO), i, 452.  
determination of the phosphorus of, in cereals (RASK and PHELPS), ii, 328.
- Liquids**, diffusion of light in (ROCARD), ii, 265.  
molecular scattering of light in (KRISHNAN), ii, 1030.  
Kerr effect in, in relation to the depolarisation of scattered light (MARTIN), ii, 90.  
scattering of light by, and their surface tension (RAMAN and RAMDAS), ii, 952, 1046.  
electrical dispersion of (COFMAN), ii, 1060.  
potential differences at the junction of (VOSNESSENSKI), ii, 673.  
potential differences between air and (FRUMKIN), ii, 544.  
fall of potential in, produced by small bubbles of air (KLEEMAN and PITTS), ii, 659.  
potential at interfaces of gases with (FRUMKIN), ii, 873.  
action of charged particles in (BURTON and CURRIE), ii, 531.  
dielectric constants of (SAYOE and BRISCOE), ii, 263; (BELL and POYNTON), ii, 477; (HARRIS), ii, 631.  
heat of vaporisation and surface tension of (PLĂCINTĂNU), ii, 39.  
superheating of (KENRICK, GILBERT, and WISMER), ii, 99.  
specific heat of (GHOSH), ii, 275; (SCHULZE), ii, 491; (FOA), ii, 1138.  
mutual solubilities of (KABLUKOV and MALISCHIEVA), ii, 768.  
relation between critical temperature and expansion of (DR KOLOSOVSKI), ii, 446.  
coefficient of expansion of (SASLAWSKI), ii, 22.
- Liquids**, viscosity of, at the boiling point (MACLEOD), ii, 1049.  
under pressure (BRIDGMAN), ii, 1143.  
containing dissolved gases (LEWIS), ii, 377.  
molecular weight and viscosity of (MACLEOD), ii, 498.  
absorption of gases by (LEWIS and WHITMAN), ii, 106.  
density of (VAN LAAR), ii, 278.  
velocity of sound in, and their heat of vaporisation (IONESCU), ii, 644.  
kinetic theory of evaporation of (MACLEOD), ii, 784.  
vaporisation and changes at contact surface of (SANO), ii, 681.  
apparatus for volatilisation of (YANT and FREY), ii, 897.  
separated by a membrane, equilibria of (SCHREINEMAKERS), ii, 399.  
orientation of molecules on the surfaces of (HARKINS), ii, 1148.  
surface tension at the interface of (DU NOÛY), ii, 647.  
interfacial properties of, in contact with gases (GILBERT and SHAW), ii, 795.  
kinetic theory of surface films of (SCHOFIELD and RIDEAL), ii, 960.  
velocity of reaction of two (JABŁCZYŃSKI, WIECKOWSKI, and KLEIN), ii, 410.  
saturation pressure of (HERZ), ii, 850.  
influence of indifferent gases on the saturated vapour concentration of (POLLITZER and STREBEL), ii, 104.  
supersaturation of gases in (KENRICK, WISMER, and WYATT), ii, 105; (WYATT), ii, 504.  
molecular interaction in (ANTONOV), ii, 865.  
anisotropic, Born's theory of (SZIVESSY), ii, 1123.  
binary mixed (FAUST), ii, 29.  
composition of (FRANK), ii, 188.  
physical properties of, near the critical point (PERRAKIS), ii, 764.  
refractive index of (LICHTENCKER), ii, 632.  
specific heats of (WILLIAMS and DANIELS), ii, 765.  
opalescence of (RAO), ii, 739.  
compressibility of (KAR), ii, 970.  
effect of a non-volatile solute on the boiling point and partial pressure of (CARROLL, ROLFSON, and MATHEWS), ii, 858, 859.

- Liquids**, binary mixed, vapour pressure and miscibility of (HERZFELD), ii, 1143.  
 pressure curves of (FRANK), ii, 648.  
 viscosity of (MACLEOD), ii, 280.  
 corrosive, distillation flask for (BROWN), ii, 897.  
 dust-free, preparation of (GARRARD), ii, 704.  
 fluorescent, modifications of (ASTER-BLUM), ii, 1026.  
 inorganic, surface potential of (WESSEL), ii, 795.  
 mixed, dielectric constants of (GRÜTZMACHER), ii, 263.  
 evaporation of (KING and SMEDLEY), ii, 101.  
 volume of (LORENZ and HERZ), ii, 101.  
 influence of proximity to critical solution temperature on volume of (PERRAKIS), ii, 29.  
 organic, refractive index of (EISELE), ii, 264.  
 double refraction of (VORLÄNDER and WALTER), ii, 183.  
 electrical double refraction of (BECKER), ii, 755.  
 electrical resistance of films of (BHATNAGAR, PRASAD, MITRA, and SHRIVASTAVA), ii, 948.  
 velocity of sound and ratio of specific heats of (BUSSE), ii, 373.  
 compressibility of (SCHMIDT), ii, 497; (HEBESGEN), ii, 763.  
 dielectric constants of (GRENACHER; FRANCKE), ii, 741.  
 dielectric constant and molecular association of (LANGE), ii, 840.  
 molecular volume, viscosity, and ionic mobility of (WÖHLISCH), ii, 277.  
 temperatures of equal viscosity of (HERZ), ii, 1049.  
 mixed, vapour pressure of (LESLIE and CARR), ii, 1050.  
 polymerised, diffraction of Röntgen rays by (DE SMEDT), i, 6.  
 supercooled, entropy of (PAULING and TOLMAN), ii, 952.  
 ternary mixed, critical solution temperature of (BOUTARIC and CORBET), ii, 103.  
 determination of solid matter in (v. BÖRNEGG), ii, 324.  
*Listera ovata*, loroglossin in (CHABAUX and DELAUNAY), i, 874.  
**Lithium** (HÜTTIG and SCHLISSMANN), ii, 1181.  
 arc spectrum of (AUSTIN), ii, 995.  
 Lithium, red line in spectrum of (AINSLIE), ii, 450; (GREEN), ii, 1013.  
 spark spectrum of (SCHÜLER), ii, 339; (WERNER), ii, 1013.  
 isotope of (COSTA), ii, 619.  
 radiation and ionisation potentials of (ROLLEFSON), ii, 722.  
 vapour pressure of, in liquid ammonia (KRAUS and JOHNSON), ii, 389.  
 equilibrium between barium and, and their fused chlorides (JELLINEK and CZERWINSKI), ii, 124.  
 Lithium salts, density and refractivity of solutions of (HÜTTIG and KELLER), ii, 963.  
 Lithium chloride, activity coefficient of (SCATCHARD), ii, 397.  
 vapour pressure of hydrochloric acid solutions of (YANNAKIS), ii, 401.  
 fluoride, crystal structure of, and isomorphism of, with magnesium fluoride (FERRARI), ii, 845.  
 equilibrium of magnesium fluoride and (TACCHINI), ii, 122; (BRUNI and LEVI), ii, 281.  
 hydride (HÜTTIG and KRAJEWSKI), ii, 296.  
 potassium sulphate, crystal structure of (BRADLEY), ii, 638.  
 monosulphide, crystal structure of (CLAASSEN), ii, 845.  
 mono- and di-sulphides (THOMAS and JONES), ii, 58.  
 tungstate, equilibria of, with alkali tungstates and tungsten trioxide (VAN LIEMPT), ii, 421.  
**Lithium organic compounds**:—  
 Lithium benzyl (HEIN, PETZCHNER, WAGLER, and SEGITZ), ii, 217.  
**Lithium determination and separation**:—  
 determination and separation of (SMITH and ROSS), ii, 601.  
 Lithium minerals, analysis of (GUNTZ and BENOIT), ii, 1202.  
 Liver, physiology of (BOLLMANN, MANN, and MAGATH), i, 1496.  
 autolysis of the pulp of (STEPPUHN and UTKIN-LJUBOVZOV), i, 864.  
 production of urea in autolysis of (McCANCE), i, 472.  
 intermediate carbohydrate metabolism in (BRUGSCH and HORSTERS), i, 483.  
 carbohydrate metabolism and gaseous exchange of (BRUGSCH, HORSTERS, and SHINODA), i, 192.  
 proteolytic enzymes of (ZACHRISSON), i, 335; (UTKIN-LJUBOVZOV), ii, 864.

- Liver**, glycogen content of (FRANK and FÖRSTER), i, 1503.  
 effect of insulin on (CORI), i, 753.  
 lipins and fats in, during fasting and phosphorus poisoning (SACCHETTO), i, 1357.  
 metabolism in diseases of (v. FEJÉR and HETÉNYI), i, 725.  
 influence of, on protein metabolism (ROSENBAUM), i, 464.  
 effect of alcohols on sugar in (LESSER), i, 613.  
 detoxicating function of (HÄNDEL), i, 610.
- Lobelane**, and *dichloro*-, and their salts (WIELAND and HERMSEN), i, 1089.  
*n*- and *iso*-Lobelanidines, and their salts and derivatives (WIELAND, SCHÖPF, and HERMSEN), i, 1087, 1089.
- Lobelanine** (WIELAND, SCHÖPF, and HERMSEN), i, 1087.  
*n*- and *iso*-Lobelanines, and their salts (WIELAND, SCHÖPF, and HERMSEN), i, 1088.
- Lobelia**, alkaloids from (WIELAND, SCHÖPF, and HERMSEN), i, 1087.
- Lobelia inflata**, alkaloids of (STENZL), i, 847.
- Lobelide**, chloro-, and its hydrochloride (WIELAND and HERMSEN), i, 1089.
- Lobeline**, and its benzoate hydrochloride (WIELAND and HERMSEN), i, 1089.
- $\alpha$ -Lobeline**, preparation of (BOEHRINGER SOHN), i, 425.
- Locust tree**. See *Robinia pseudocacia*.
- Loroglossin**, occurrence of, in plants (CHARAUX and DELAUNEY), i, 874.  
 from orchids (DELAUNEY), i, 487.
- Lucerne** (*alfalfa*), nitrogenous constituents of the juice of (VICKERY; VICKERY and VINSON), i, 1870; (VICKERY and LEAVENWORTH), i, 873.  
 non-volatile organic acids of (TURNER and HARTMAN), i, 1124.  
 proteins from leaves of (CHIBNALL and NOLAN), i, 215.
- Luminescence**, decay and regeneration of (VIOL, KAMMER, and MILLER), ii, 474.  
 from  $\alpha$ -rays, decay of (WITMER), ii, 89.
- Lungs**, extractives of the (KAPLANSKY), i, 97.
- Lupanine**, constitution and derivatives of (THOMS and BERGERHOFF), i, 575.
- d*-Lupanine, isolation of, from *Lupinus kingii* (CROUCH), i, 1447.
- Lupasee**, constitution of (CASTORO), i, 1244.
- Lupinane**, and its picrate (KALLE & Co.), i, 294.
- Lupines**, studies on (CROUCH), i, 1447.  
*Lupinus kingii*, isolation of *d*-lupanine from (CROUCH), i, 1447.  
*Lupinus luteus*, enzymic decomposition of arginine in (WALTER), i, 1358.  
*Lupinus spathulatus*, alkaloid from (COUCH), i, 61.
- Lupulon**, and its derivatives (WÖLLMER), i, 690.
- Luteolin acetate** (OESTERLE and WANDER), i, 1439.
- 2:6-Lutidine**, 3-amino-, and its hydrochloride (GULLAND and ROBINSON), i, 1186.
- Lutidinic acid**, phenyl ester (MEYER), i, 836.
- 4-Lutidone-3-carboxylic acid**, ethyl ester (RASSWEILER and ADAMS), i, 299.
- 4-Lutidone-3:5-dicarboxylic acid**, ethyl ester (RASSWEILER and ADAMS), i, 299.
- Lycopin**, determination of, colorimetrically (CONNELL), i, 214.
- Lymph**, changes in, in anaphylactic shock (PETERSEN and HUGHES), i, 724.
- Lysine**, synthesis of, in the organism (MCGINTY, LEWIS, and MARVEL), i, 100.  
 synthesis of precursors of (MARVEL, MACCORQUODALE, KENDALL, and LAZIER), i, 234.  
 behaviour of, in the liver (FELIX and ROTHLEH), i, 859.
- Lysolecithin**, acyl derivatives of (LEVENE and ROLF), i, 92.

## M.

- Magnesium**, structure of (COLLINS), ii, 1023.  
 electrolytic preparation of (RUFF and BUSCH), ii, 569; (HARVEY), ii, 570.  
 spectrum of (GREEN and PETERSEN), ii, 451.  
*K*-absorption spectrum of (ROBINSON), ii, 614.  
 vapour, absorption spectrum of (NARAYAN, GUNNAIYA, and RAO), ii, 337; (NARAYAN and RAO), ii, 927.  
 arc spectrum of (RUARK), ii, 1016.  
 spark spectrum of (BROWN and BEAMS), ii, 918.  
 spectra of mixed vapours of the alkali metals and (BARRATT), ii, 927.  
 optical constants of crystals of (GRABER), ii, 1041.  
 conductivities of (SCHOFFIELD), ii, 273.  
 potential of (SMITS), ii, 544.

- Magnesium**, polarisation of, in alkaline solution (JIRSA and LORIS), ii, 45.  
 isotopes of (PILLEY), ii, 464.  
 sizes of electron-kernels of aluminium, silicon, sodium, and (TURNER), ii, 349.  
 influence of, on pressure in the eye (KANEKO), i, 333.
- Magnesium alloys** with aluminium (DANIELS), ii, 103; (WARIS), ii, 786.  
 with aluminium and cadmium (VALENTIN and CHAUDRON), ii, 205.  
 with cerium, adsorption of hydrogen by (SIEVERTS and ROELL), ii, 854.
- Magnesium compounds**, isomorphism of beryllium compounds and (ZAMBONINI and CAROBBI), ii, 144.
- Magnesium boride**, action of water and acids on (RAY), ii, 417.  
 carbonate, dissociation of (CENTNERSZWER and BRUŽS), ii, 206, 685.  
 equilibrium of, in ammoniacal solutions (LAFONTAINE), ii, 735.  
 chloride, hydrolysis of aqueous solutions of, in presence of textile fibres (SCHWALBE and SCHEFF), i, 1045.  
 fluoride, crystal structure of (BUCKLEY and VERNON), ii, 484.  
 crystal structure and isomorphism of, with lithium fluoride (FERRARI), ii, 845.  
 equilibrium of lithium fluoride and (TACCHINI), ii, 122; (BRUNI and LEVI), ii, 281.  
 hydroxide, solubility of (GJALDBAÆK), i, 652, 653.  
 precipitation of, electrometrically (BRITTON), ii, 1203.  
 rhythmic precipitation of (POPP), ii, 667.  
 precipitation of aluminium hydroxide with (PARISELLE and LANDE), ii, 903.
- oxide** (*magnesia*), solubility of, in water (REMY and KUHLMANN), ii, 30.  
 equilibrium of ferric oxide and (FORESTIER and CHAUDRON), ii, 1159.  
 condensation of formaldehyde with (SCHMALFUSS and KALLE), i, 116.  
 action of, on silicates at high temperatures (TAMMANN and GREVE-MEYER), ii, 580.  
 ammonium phosphate, precipitation of, in presence of aluminium (HAHN and SCHNEIDERER), ii, 69.  
 silicate, artificial (DAMIENS), ii, 812.  
 silicide, atomic structure of (OWEN and PRESTON), ii, 93.
- Magnesium sulphate**, miscibility of ammonium sulphate and (ŻWEI-GŁÓWNA), ii, 189.  
 equilibrium of sodium chloride with (KURNAKOV and SHEMTSCHUSHNI), ii, 299.  
 reduction of (ALTHAMMER), ii, 145.
- Magnesium organic compounds**, luminescence spectra of (DUFFORD, NIGHTINGALE, and CALVERT), ii, 89.  
 electrolytic properties of (KONDYREV; KONDYREV and MANOJEV), i, 529.  
 Grignard's, constitution of (MEISENHEIMER), i, 527.  
 reducing action of (STAS), i, 1052.  
 reduction of azobenzene by (GILMAN and PICKENS), i, 1336.  
 reaction of cupric chloride with (GILMAN and PARKER), i, 237.  
 action of ethyl hypochlorite on (DURAND and NAVES), i, 1054.  
 action of methyl cyanofornate on (FINGER and GAUL), i, 1431.  
 action of, on naphthoquinones (FRANSEN), i, 1146.  
 action of, on nitrides (BREECKPOT), i, 14; (BRUYLANTS), i, 15; (CHRISTIAEN), i, 23; (ECTORS), i, 138; (JASPERS), i, 936.  
 reactions of, with alkyl sulphonates (GILMAN and BEABER), i, 802.  
 with acyl halides (TISTOCHENKO), i, 775.  
 with di-iodobenzenes (THOMAS), i, 1055.  
 alkoxides (TERENTIEV), i, 110.  
*p*-anisyl and *p*-tolyl bromides, action of, on camphor (LEDUC), i, 821.  
 arsines (JOB, REICH, and VERGNAUD), i, 173.  
 arylamines, action of hydrogen peroxide on (DURAND and NAVES), i, 535.  
 ethyl bromide, electrical conductivity of (KONDYREV and MANOJEV), i, 529.  
 compound of diphenylcarbazine and (FEIGL and LEDERER), i, 171.  
 halides, etherates of (MEISENHEIMER, PIPER, and LANGE), i, 1252.  
 alkyl halides, reaction of aryl sulphonates with (GILMAN, BEABER, and MYERS), i, 1057.  
 alkyl and aryl halides, reducing action of (RHEINBOLDT and ROLEFF), i, 542.  
 aryl halides, luminescence of (DUFFORD, NIGHTINGALE, and CALVERT), ii, 474.  
 mercapto-halides, reactions of (GILMAN and KING), i, 810.

**Magnesium organic compounds:—**

$\alpha$ -naphthyl bromide, reactions between inorganic antimony compounds and (MATSUMIYA), i, 1472.

action of methyl cyanoformate on (FINGER and GAUL), i, 1431.

phenyl bromide, action of, on organic acids (PETERS, GRIFFITH, BRIGGS, and FRENCH), i, 543.

action of, on  $\beta$ -bromoethylphthalimide and  $\gamma$ -bromopropylphthalimide (KOH and LAKNER), i, 1276.

**Magnesium detection, determination, and separation:—**

detection of (FRIGL), ii, 435; (MURMANN), ii, 437.

detection of, in small quantities (HAHN), ii, 1095.

determination of (CONGON and VANDERHOOK), ii, 601; (STEWART and ARCHIBALD), ii, 824.

determination of, nephelometrically (KRISS), i, 852.

determination of, in presence of aluminium (HAHN), ii, 601; JANDER, WENDEHORST, and WEBER), ii, 715.

determination of, in copper alloys with zinc (SCHÜRMANN and SCHÖB), ii, 902.

separation of calcium and (RODT and KINDSCHER), ii, 158; (LUFF), ii, 438.

**Magnesiopyrrole, syntheses with (ODDO), i, 295, 978; (ODDO and MINGOIA), i, 978.**

netic permeability, effect of an alternating field on (SPOONER), ii, 487.

susceptibility and radii of atoms (CABRERA), ii, 624.

and constitution of organic compounds (PASCAL), ii, 624.

**Magnetism, researches on (WOLTJER; WOLTJER and ONNES), ii, 1038.**

of polymerides (PASCAL), ii, 371.

and valency of complex salts (WELO and BAUDISCH), ii, 1031.

See also Ferromagnetism and Paramagnetism.

**Magnetite, transformation of, into hæmatite (WELO and BAUDISCH), ii, 845.**

magnetisation of iron cobalt, nickel, and (ASHWÖRTH), ii, 944.

**Magnetochemistry (SCHÜKAREV), ii, 47, 264.**

of cyclic compounds (PASCAL), ii, 1123.

**Magneton numbers, spectroscopic (STONER), ii, 618.**

Ma Huang, ephedrine from (CHEN and SCHMIDT), i, 194.

Mahua flowers, production of acetone from (GOKHALE), i, 1216.

Mahua oil, bio-genesis of (FOWLER and DINANATH), i, 346.

Maize, influence of soil temperature and moisture on (ECKERSON and DICKSON), i, 217.

electrosilage of (BRAHM), i, 623.

proteins of (ARBUCKLE and THIES), i, 1518.

vitamin-E in extracts of (SURE), i, 212.

effect of a diet of, on creatine and creatinine excretion (PALLADIN and KRATINOVA), i, 1514.

effect of nitrogen nutrition on growth of (RIPPEL and LUDWIG), i, 485.

Maize kernels, constituents of (JODIDI), i, 1027.

Malachite, formation of, from basic copper carbonate (HEPBURN), ii, 696.

Malacon, zirconium and hafnium from (MARQUIS, P. and G. URBAIN), ii, 699.

Maleic acid, crystal structure of (YARDELEY), ii, 1126.

conversion of, into fumaric acid (TERRY and EICHELBERGER), i, 780.

halogenation of (TERRY and EICHELBERGER), i, 631.

oxidation of, to tartaric acid (MILAS and TERRY), i, 780.

sodium salt, surface tension of solutions of (RIBAS), ii, 647.

esters, transformation of, into fumaric esters (MEERWEIN and WEBER), i, 1038.

Maleic acid, dihydroxy-, decomposition of (GOEREL), i, 1038.

Maleinimide, diiodo- (TERENTIEV and TSCHELINCEV), i, 295.

Malic acid, and its salts, action of boric acid on the rotation of (DARMOIS), ii, 357.

decomposition of, by sulphuric acid (WHITFORD), ii, 559.

and its salts, pharmacology of (UNDERHILL and PAOK), i, 1211.

copper salts, optical activity of (DARMOIS), ii, 15.

lead salt, solubilities of (AUERBACH and WEBER), ii, 1130.

detection of, in tissues (KLEIN and WEINER), i, 871.

Malic acid, bromo- and chloro- (KUHN and EBEL), i, 781.

*d*- and *l*-chloro-, and their salts (SONN and ROSINSKY), i, 1237.

Malol (RIVIÈRE and PICHARD), i, 345.

Malolalic acid, and its salts (RIVIÈRE and PICHARD), i, 345.

- Malonamides**, action of hydrazine on halogen derivatives of (HIRST, MACBETH, and TRAILL), i, 1251.
- Malonbenzyl-*p*-tolylamide**, and bromo- (WEST), i, 524.
- Malon-*p*-bromophenylethylamide**, bromo- (WEST), i, 524.
- Malon-*p*-bromophenylmethylethylamide**, bromo- (WEST), i, 524.
- Malonisobutylamide**, and bromo- (WEST), i, 524.
- Malondisopropylamide**, and bromo- (WEST), i, 524.
- Malondi-*p*-tolylamide**, bromo- (WEST), i, 524.
- Malonethylamide**, and bromo- (WEST), i, 524.
- Malonethylisopropylamide**, and bromo- (WEST), i, 524.
- Malonhydrazide** (HIRST, MACBETH, and TRAILL), i, 1251.
- Malonic acid**, dissociation constants of (BRITTON), ii, 977.
- alkaline earth salts, solubilities of (WALKER), ii, 769.
- aniline trihydrogen salt (RAMBECH), i, 385.
- esters, velocity of hydrolysis of (SKRABAL and MATIEVIC), ii, 36.
- di- $\beta$ -chloroethyl esters (BENNETT), i, 884.
- ethyl ester, addition of, to anils (WAYNE and COHEN), i, 550.
- potassium ethyl ester, electrolysis of (ROBERTSON), ii, 1178.
- Malonic acid**, halogen derivatives, quantitative reduction of, by hydriodic acid (WEST), i, 524.
- chloronitro-, ethyl ester (MACBETH and TRAILL), i, 782.
- Malonoguanidic acid** (MITTER and PALIT), i, 1320.
- Malononitrile**, halogenation of (OTT and FINKEN), i, 1251.
- Malononitrile**, amino-, action of nitrous acid on (GRISCHKEVITSCH-TROCHIMOVSKI), i, 1104.
- benzoyl derivative and compounds with aldehydes (GRISCHKEVITSCH-TROCHIMOVSKI and SEMENCOV), i, 1069.
- Malonphenylmethylethylamide** (WEST), i, 524.
- Malonisopropylamide**, and bromo- (WEST), i, 524.
- Malon-*p*-tolylamide**, bromo- (WEST), i, 524.
- Malon-*p*-tolylisobutylamide**, and bromo- (WEST), i, 524.
- Malon-*p*-tolylethylamide**, and bromo- (WEST), i, 524.
- Malon-*p*-tolylmethylethylamide**, and bromo- (WEST), i, 524.
- Malon-*p*-tolylisopropylamide**, and bromo- (WEST), i, 524.
- Maltodextrins**, nature of (LING and NANJII), i, 516.
- Maltose**, octa-acetyl derivative and chloro-, hepta-acetyl derivative (FREUDENBERG, v. HOCHSTETTER, and ENGELS), i, 635.
- Mandelic acid**, configuration of, and its acetyl, benzoyl, and cinnamoyl derivatives, esters of (FREUDENBERG and MARKERT), i, 1275.
- hydroxylamine salt (OESPER and BALLARD), i, 1233.
- Mandelonitrile**, transformation of, to the *iso*-form (WOOD and LILLEY), i, 400.
- Manganese**, occurrence of, in soils, plants, and animals (MCHARGUE), i, 1023.
- atomic volume of (CAMPBELL), ii, 762.
- crystal structure of (WESTGREN and PHRAGMÉN), ii, 1035.
- K doublets in spectrum of (SELJAKOV and KRASNIKOV), ii, 914.
- spark spectrum of (L. and E. BLOCH), ii, 829.
- electro-deposition of (ALLMAND and CAMPBELL), ii, 305; (BŘEZINA), ii, 676.
- ionised, ionisation potential of (HARTREE), ii, 918.
- allotropy of (BRADLEY), ii, 1124.
- Manganese alloys** with copper, crystal structure of (PATTERSON), ii, 1180.
- with copper and iron (OSTERMANN), ii, 1050.
- Manganese compounds** in arable soils (BERTRAND), i, 223.
- Manganese arsenates** (DEISS), ii, 893.
- halides, ammoniates of (BILTZ and RAHLFS), ii, 1191.
- oxide, colloidal (ANAGYROS), ii, 1152.
- dioxide, colloidal, formation of, in reduction of permanganates (GELOS), ii, 861.
- oxidation of carbon monoxide and of hydrogen by (FRAZER and GREIDER), ii, 1064.
- hydrated, adsorption of silver by (PAVLOV), ii, 507.
- phosphates, equilibria of formation of (GRUBE and STAMMANN), ii, 893.
- selenide (MOSER and ATYNSKI), ii, 583.
- sulphate, equilibrium of aluminium sulphate, water, and (CAVEN and MITCHELL), ii, 396.
- Manganic fluoride**, orthoarsenate and phosphates (TRAVERS), ii, 586.

**Manganese:—**

- Manganous salts**, oxidation of, to permanganic acid (TRAVERS), ii, 585.
- hydroxide, precipitation of, electro-metrically (BRITTON), ii, 1203.
- Permanganates**, thermal decomposition of (MOLES and CRESPI), ii, 877.
- mechanism of reduction of (HOLLUTA), ii, 49, 407.
- effect of a magnetic field on the reduction of (PARKER and ARMES), ii, 683.
- reduction of, by arsenious acid (TRAVERS), ii, 585; (GELOSO), ii, 661.
- reduction of, by ferrous salts and by iodides (MÜLLER and MÖLLERING), ii, 305.
- spectrophotometric determination of the oxidising power of (GOMBOS), ii, 237.
- oxidation of unsaturated compounds with (NAMETKIN), i, 1145.
- catalysis of the reaction of oxalic acid with (RIDLEY), ii, 689.
- Manganese detection, determination, and separation:—**
- detection of, without nitric acid (LONGINESCU and PETRESCU), ii, 1206.
- determination of (JÄRVINEN), ii, 602.
- determination of, volumetrically (ANGELESCU), ii, 330; (HECZKO; HACKL), ii, 440.
- determination of, in hydrofluoric acid solution (HOLLUTA and OBRIST), ii, 160.
- separation of cobalt, nickel, zinc, and (LEMARCHANDS), ii, 242.
- Manganese steel**, hardness of (BENEDICKS), ii, 188.
- Manganolangeinite** from Vesuvius (ZAMBONINI and CAROBBI), ii, 898.
- Mannito-aluminates** (HERASTYMENKO), i, 774.
- Mannitol**, formation of, by bacterial fermentation of sugars (STILES, PETERSON, and FRED), i, 1216.
- solubility of mixtures of boric acid and (HERMANS), i, 501.
- fermentation of, by yeast (LVOV), i, 1509.
- d-Mannitol** from *Gardenia turgida* (FORSTER and RAO), i, 1295.
- Mannobiose**, and its phenylhydrazone (PRINGSHEIM and GENIN), i, 214.
- Mannose diisopropylidene ether**, constitution of (FREUNDENBERG and WOLF), i, 367.

- Manometer**, glass, for gases attacking mercury (KLEMENC), ii, 995.
- lever (FRANK), ii, 995.
- mercury (SWAN), ii, 707.
- filling of (WEATHERILL), ii, 896.
- Manures**, iodine in (v. FELLEBERG), i, 347.
- artificial, physiological reactions of salts used as (KAPPEN and LUKACS), i, 1523.
- determination of urea oxalates in (SABALITSCHKA and KUBISCH), i, 347.
- stable, nitrogen in (SANI and GRILLI), i, 218.
- Margosa oil**, physiological action of (NORD and SCHWEITZER), i, 734.
- Marking nut**. See *Semecarpus anacardium*.
- Marmite**, effects of yeast and of, on calcification (KORENCHIEVSKY and CARR), i, 211.
- Martensite** (WHEATLEY), ii, 488.
- formation of, in carbon steel (HONDA), ii, 972.
- heat of transformation of (SCHNEIDER), ii, 95.
- Mass action**, constant of (KLEEMAN), ii, 1170.
- Mass action law** for gases (GILLESPIE), ii, 532.
- Masurium** (NONDACK, TACKE, and BERG), ii, 939.
- Matter**, theory of state of (SCHUSTER), ii, 951, 1142.
- properties of (WEISSENBERG), ii, 1129.
- optical constants of (DARWIN), ii, 2.
- and radiation (STERN; WESTPHAL), ii, 926.
- living, chemical processes in (CROZIER), i, 101.
- representation of analyses of (VERNADSKI), i, 606.
- Mattenucha orientalis*, constituents of (MUNESADA), i, 620.
- Mattenucinol* (MUNESADA), i, 620.
- Mauveine**, preparation of (COBENZL), i, 436.
- Meat**, effect of cooking on (RICHT and MONCEAUX), i, 859.
- Meconic acid**, manganous salts (VERKADE), i, 421.
- m-Meconine**, nitration of (RAY and ROBINSON), i, 1153.
- Meconines**, synthesis of (EDWARDS, PERKIN, and STOYLE), i, 404.
- Melaleuca crubescens* and *hypericifolia*, oils from (PENFOLD), i, 688.
- Melamine**, tricyano-, and its salts (BURDICK), i, 1048.

- Melampyrum arvense* and *pratense*, changes in, during growth (BRÄCKE), i, 619.
- Melanin in urine, and its detection (AUFRECHT), i, 1850.
- Melanins (HEINLEIN), i, 449.  
absorption spectrum of (GALLERANI), ii, 266.
- Melibiose octamethyl ether (SCHLUBACH and RAUCHENBERGER), i, 889.
- Mellite, composition of (WINCHELL), ii, 152; (GOSSNER), ii, 821.
- Melonic acid, silver and sodium salts (BURDICK), i, 1048.
- Melting point and critical temperature (VAN LAAR and LORENZ), ii, 374.  
relation between boiling point, critical temperature, and (PRUD'HOMME), ii, 99.  
of benzene derivatives (PASTAK), ii, 759.  
of halides of the fourth group (HANTZSCH and CARLSOHN), ii, 1044.  
of inorganic compounds and of elements (FRIEDERICH and SITTING), ii, 848.
- Membranes, equilibria with (HÜCKEL), ii, 528, 668.  
permeability of (BANCROFT and GURCHOT), ii, 110.  
permeability and electrical properties of (MICHAELIS), ii, 1150; (FUJITA), ii, 1151.  
collodion, diffusion of water through (ADOLPH), ii, 859.  
protein films on (HITCHCOCK), ii, 1054.  
for physico-chemical analysis (FOUARD), ii, 324.  
mammalian serous, electro-endosmosis through (MUDD), i, 468, 1855.  
semi-permeable, equilibria with (KAMEYAMA), ii, 1062; (SCHREINEMAKERS), ii, 1062, 1063.
- Men, calcium and phosphorus metabolism in (HEINELT), i, 1497.
- Mentha pulegium*,  $\Delta^1$ -menthen-3-one in oil from (MORANI), i, 146.
- $\Delta^3$ -Menthene nitrosochloride (MEREJKOVSKI), i, 1291.
- Menthol, surface tension of aqueous solutions of (EDWARDS), ii, 337.
- l*-Menthol, catalytic oxidation of (KOMATSU and KURATA), i, 637.
- Menthols, and their derivatives, from 2-chloro-5-methylcyclohexanols (BEDOS), i, 1078.
- Menthone, and its derivatives (BEDOS), i, 1078.  
condensation of, with *p*-tolualdehyde (SAMDAHL), i, 414.
- l*-Menthone, catalysis of inversion of (KOMATSU and KURATA), i, 1290.
- Menthones, catalytic formation of, from *l*-menthol (KOMATSU and KURATA), i, 943.
- Menthyl compounds, crystallography of (GREENWOOD), ii, 1037.
- l*-Menthyl sodium dithiocarbonate (HOLMBERG and ROSEN), i, 1291.
- l*-*O*-Menthyl-*N*-dimethylthiourethane (HOLMBERG and ROSEN), i, 1291.
- l*-*O*-Menthyl-*N*-methylthiourethane (HOLMBERG and ROSEN), i, 1291.
- $\delta$ -Menthylsemicarbazide, and its derivatives (WILSON and CRAWFORD), i, 318.
- l*-*O*-Menthylthiourethane, and its derivatives (HOLMBERG and ROSEN), i, 1291.
- Menyanthes trifoliata*, constituents of (ZELLNER), i, 763.
- Mercaptans, alkylation of (GILMAN and BEABER), i, 811.
- Mercapturic acid, synthesis of, in dogs (COOMBS and HELE), i, 1496.
- Mercellulose (DEHNERT and KÖNIG), i, 370.
- Mercuration of aromatic compounds (COFFEY), i, 844.
- Mercurialis* (HAAS and HILL), i, 759.  
seeds of (GILLOT), i, 1224.
- Mercurialis perennis*, extraction of maltose from tubers of (GILLOT), i, 487.
- Mercuric salts. See under Mercury.
- Mercury, spectrum of (WOOD), ii, 339, 1015; (TURNER and COMPTON; FUKUDA), ii, 613.  
shifting of lines in the spectrum of (FUKUDA), ii, 1101.  
spectrum of illuminated vapour of (GROSS and TERENIN), ii, 915.  
arc spectrum of (TAKAMINE and FUKUDA), ii, 186, 725; (RAYLEIGH), ii, 738; (NICHOLS and TEAR), ii, 917.  
and its excitation (ELDRIDGE; HAYNER; MCCURDY, TURNER, and COMPTON), ii, 1102.  
atomic and band spectra of (HULTHÉN), ii, 1113.  
band spectrum of (HULTHÉN), ii, 11, 470.  
resonance spectrum of, in a magnetic field (FERMI and RASETTI), ii, 839.  
vapour, resonance fluorescence spectrum of (RUMP), ii, 473.  
spark spectrum of (BAYEN), ii, 168; (CARROLL), ii, 1101.  
ultra-red spark spectrum of (LAFFAY), ii, 334.

- Mercury** vapour, fluorescence of (WOOD), ii, 3; (GHOSH), ii, 1026.  
 resonance fluorescence of (STUART; HANLE), ii, 629.  
 radiation excited in (HAYNER), ii, 1017.  
 resonance radiation of (NOYES), ii, 573.  
 polarisation of the resonance radiation of (FERMI and RASETTI), ii, 473; (RAMANATHAN), ii, 729.  
 glow discharge in (COMPTON, TURNER, and McCURDY), ii, 86.  
 ionisation of (TUVE; TATE), ii, 1106.  
   by ultra-violet light (ROUSE and GIDDINGS), ii, 919.  
 photo-electric effect of small drops of (WASSER), ii, 80.  
 electrolytic behaviour of (LIEBREICH and WIEDERHOLT), ii, 44.  
 electrolytic purification of (BRUMMER and v. NÁRAY-SZABÓ), ii, 303.  
 capillary and photo-electric properties of (POPESCO), ii, 952.  
 influence of colloidal solutions on the electrocapillarity of (ŠANDERA), ii, 659.  
 electrical resistance of, in magnetic fields (JONES), ii, 754.  
 polarisation of, in alkaline solution (JIRSA and LORIS), ii, 45.  
 isotopes of (METCALFE and VENKATESACHAR), ii, 82; (STUMPF), ii, 619; (ASTON), ii, 833.  
 saturation pressure of (BERNHARDT), ii, 492.  
 molecular weight of, at varying temperatures (JOUNIAUX), ii, 23.  
 atoms, metastable forms of (MARSHALL), ii, 339; (RASETTI), ii, 340.  
 life of excited atoms of (GERLACH and SCHÜTZ), ii, 171.  
 heat of dissociation of, calculated from the band spectrum (KOERNICKE), ii, 848.  
 vapour, diffusion of, through nitrogen (MULLALY and JACQUES), ii, 27.  
 velocity of diffusion of metals in (COHEN and BRUNS), ii, 648.  
 adsorption of vapours at the surface of (IREDALE), ii, 508.  
 adsorption coefficient of electrons in vapour of (BRODE), ii, 1020.  
 adsorption of, by platinum (MAXTED), ii, 384.  
 vapour, trapping of, with potassium (HUGHES and POINDEXTER), ii, 895.  
 colloidal, colour of (FEICK), ii, 1153.  
 action of chlorine on (GETMAN), ii, 59.
- Mercury**, conversion of, into gold (KAUL), ii, 177; (NAGAOKA), ii, 835, 1111; (STAMMREICH), ii, 1208.  
 combination of helium and (MANLEY), ii, 57, 314, 696; (LIND and BARDWELL), ii, 1181.  
 photochemical reactions of, with oxygen and nitrogen dioxide (NOYES), ii, 1081.  
 purification of (RUSSELL and EVANS), ii, 1205.  
 distillation apparatus for (ŠVÉDA), ii, 428; (WETZEL), ii, 589.
- Mercury alloys** (*amalgams*), dilute, electrical conductivity of (WILLIAMS), ii, 946.  
 velocity of reaction of, with aqueous solutions (KLEIN), ii, 802.  
 use of, in volumetric analysis (SOMEVA), ii, 904, 1201.  
 with aluminium, reduction of sugars by (NANJI and PATON), i, 117.  
 with bismuth, lead, and tin, electrolysis of (KREMANN, KAPAUN, and BUNAN), ii, 313.  
 with cadmium, with calcium, and with potassium, electrolysis of (KREMANN, MÜLLER, and ORTNER), ii, 132.  
 with copper and silver (TAMMANN and STASSFURTH), ii, 377.  
 with potassium and sodium, effect of light on the action of water with (BHATNAGAR, PRASAD, and MUKERJI), ii, 811.  
 with silver and tin (TAMMANN and DAHL), ii, 502.  
 with sodium, preparation of (READ and LUCARINI), ii, 587.  
 electrolysis of (KREMANN, MÜLLER, and KIENZL), ii, 132.
- Mercury compounds**, antiseptic action of (JOACHIMOGLU and KLISSIUNIS), i, 466.  
 with ammonia salts (RAY and BANDOPADHYAY), ii, 813.  
 complex, spectrographic study of (JOB), ii, 887.
- Mercury halides**, solubilities of, in aqueous glycerol (MOLES and MARQUINA), ii, 283.  
 ammoniates of (BILTZ and MAU), ii, 1184.  
 helide (MANLEY), ii, 314, 696.  
 hydride, band spectrum of (LUDLOFF), ii, 1113.  
 sulphides, crystal structure of (BUCKLEY and VERNON), ii, 1037.
- Mercuric salts**, action of hydrogen sulphide on (PÉLABON), ii, 986.  
 complex halides of (NAIK and AVASARE), ii, 221.

**Mercury:—**

- Mercuric salts**, determination of, volumetrically (ELLMAN), ii, 1205.
- Mercuric bromide**, reduction of, by sodium formate (BOURION and PICARD), ii, 685.
- oxybromides, formation of (PÉLABON), ii, 697.
- chloride, equilibrium of ammonium and potassium chlorides, water, and (OSAKA and ANDO), ii, 128.
- antiseptic action of, in various solvents (HELLENBRAND and JOACHIMOGLU), i, 466.
- additive compound of 3:5-dibromo-*o*-toluidine and (HANN and SPENCER), i, 653.
- oxychlorides (PÉLABON), ii, 222.
- halides, double salts of, with corresponding halides of potassium and sodium (TOURNEUX and PERNOT), ii, 380.
- hydroxide, precipitation of, electrometrically (BRITTON), ii, 1204.
- iodide, allotropy of (BOKHORST and VAN DER ZEE; DAMIENS), ii, 490.
- selenide (MOSER and ATYNSKI), ii, 533.
- sulphide, crystal structure of (KOLKMEIJER, BIJVOET, and KARSSEN), ii, 93, 145, 484.
- sols, formation of (MOROSOV), ii, 197.
- telluride (BRUKL), ii, 895.
- Mercurous salts**, potentiometric determinations with (MÜLLER and AARFLOT), ii, 65.
- action of ammonia on (FEIGL and SUCHARIPIA), ii, 1184.
- Mercurous chloride**, preparation of, in saturated potassium chloride for use in the calomel electrode (EWING), ii, 571.
- halides, crystal structure of (HAVIGHURST), ii, 748.
- Mercury organic compounds** (ALBERT), i, 844.
- colloidal (ROSSI and BOCCHI), i, 601.
- bactericidal action of (HENRY, SHARP, and BROWN), i, 1006.
- unsymmetrical, preparation and decomposition of (KHARASCH and GRAFFLIN), i, 1107.
- with 1-phenylpyrrole (PLANCHER and ROSSI), i, 601.
- Mercury diaryls**, compounds of, with diphenylcarbazine (FEIGL and LEDERER), i, 170.
- mercaptide, compounds of mercury sulphide and (SACHS and BALASSA), i, 1034.

- Mercury  $\alpha$ -naphthyl compounds**, reactions of arsenic trichloride with (MATSUMIYA), i, 1339.
- di-bromo-, chloro-, and -nitro-phenyls (HEIN, WAGLER, and RETTER), i, 1341.
- di-*m*-chloro-*p*-aminophenyl (VECCHIOTTI and MICHETTI), i, 1058.
- Mercuric methyl carbylamine and cyanide** (ENKLAAR), i, 1394.
- Mercuri-*p*-benzyloxybenzoic anhydride**, hydroxy- (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 1473.
- Mercuribis(hydroxymercuri- $\beta$ -naphtholazobenzenesulphonic acid)** (PROSKOURIAKOFF and RAIZISS), i, 1108.
- Mercuribis(nitrobenzeneazosalicylic acid)** (PROSKOURIAKOFF and RAIZISS), i, 1108.
- Mercuribis-*o*-thiolbenzoic acid**, and its salts and derivatives (SACHS and BLESSL), i, 1274.
- Mercuri-2-chloroanilines** (VECCHIOTTI and MICHETTI), i, 1058.
- Mercuridihydroxyazobenzenesulphonic acid**, *d*hydroxy-, and its potassium salt (PROSKOURIAKOFF and RAIZISS), i, 1107.
- Mercuriethoxychaulmoogric anhydride**, hydroxy- (DEAN, WRENSHALL, and FUJIMOTO), i, 545.
- Mercurihydroxyazobenzenesulphonic acid**, *d*hydroxy-, and its sodium salt (PROSKOURIAKOFF and RAIZISS), i, 1108.
- Mercuri- $\beta$ -naphtholazobenzenesulphonic acid**, *d*hydroxy- (PROSKOURIAKOFF and RAIZISS), i, 1108.
- Mercuri-*o*-phenoxybenzoic anhydride**, hydroxy- (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 1473.
- Mercurisalicylic acids**, 3- and 5-cyano-, and their salts (BOEDECKER and WUNSTORF), i, 1107.
- Mercurisulphophenoxide**, sodium salt (SACCHARIN-FABRIK AKTIEN-GESELLSCHAFT VORM. FAHLBERG, LIST & Co.), i, 1197.
- Mercurisulphotolyoxide**, sodium salts (SACCHARIN-FABRIK AKTIEN-GESELLSCHAFT VORM. FAHLBERG, LIST & Co.), i, 1197.
- Mercury determination and separation:—**
- determination of, volumetrically, with potassium cyanide (RUPP, WEGNER, and MAHS), ii, 716.
- separation of copper and (SPAGU), ii, 1004.
- separation of iron from (SPAGU), ii, 1206.

**Mercury cathode.** See Cathodes.

**Mercury lamp.** See Lamp.

*Meriandra benghalensis*, constituents of oil of (PALAZZO and ALINARI), i, 418.

**Merrillite** in meteorites (SHANNON and LARSEN), ii, 321.

**Mesaconic acid**, esters, action of ammonia on (STOSIUS and PHILIPPI), i, 892.

**Mesitylene**, *ω'*-dibromo-, preparation of (V. BRAUN and ENGEL), i, 382.

**Mesityl oxide**, *p*-nitrophenylhydrazone of (V. AUWERS and KREUDER), i, 1454.

**Mesobilirubin** and its copper salt, and bromo- (FISCHER and NIEMANN), i, 1198.

**Mesobilirubinogen**, absorption coefficient of (NIEMANN), i, 1206.

**Mesoporphyrin**, conversion of, into aetioporphyrin (FISCHER and MÜLLER), i, 845.

**Mesothorium**,  $\beta$ -ray spectrum of (BLACK; THIBAUD), ii, 10.

**Mesothorium-2**, magnetic spectrum of  $\beta$ -rays from (YOVANOVITCH and D'ESPINE), ii, 85.

$\gamma$ -ray spectrum from (THIBAUD), ii, 85.

period of (WIDDOWSON and RUSSELL), ii, 468.

**Metabolism** in avitaminosis (SHINODA), i, 610.

influence of sexual glands on (KORENCHESKY and CAER), i, 1513.

of aromatic acids (CERREDO and SHERWIN), i, 100.

human, of ammonium salt and urea (ADOLPH), i, 1353.

calcium, in laying hens (BUCKNER, MARTIN, and PETER), i, 190.

in man (JANSEN), i, 190.

calcium and creatine, effect of parathyroid feeding on (WOODMAN), i, 1210.

calcium and phosphorus, effect of irradiation and diet on (HENDERSON), i, 485.

in men (HEINELT), i, 1497.

carbohydrate (LUNDSGAARD and HOLBØLL), i, 1494.

in relation to blood phosphates (BOLLIGER and HARTMAN), i, 1000.

hormone regulation of (GOTT-SCHALK), i, 481.

in the liver (BRUGSCH and HORSTERS), i, 483.

in liver diseases (V. FEJÉR and HETÉNYI), i, 725.

of tumours (C. F. and G. T. CORI), i, 999.

**Metabolism**, intermediate carbohydrate, effect of insulin on (BRUGSCH and HORSTERS), i, 208.

cholesterol, effect of insulin on (NITZESOU and CADARIU), i, 1364.

creatine and purine, relation of histidine and arginine (ROSE and COOK), i, 1003.

cystine, in children (LIGNAO), i, 610.

of frogs (HSÜ), i, 1208.

of galactose (HOWE and CHANDLER), i, 1354.

of glycerol in diabetes (CHAMBERS and DEUEL), i, 1352.

of glyoxalines (LEITER), i, 1003.

lactic acid, in the animal organism (MEYERHOF and MEIER), i, 612.

effect of insulin and other substances on (COLLAZO and SUPNIEWSKI), i, 342.

in diabetes (COLLAZO and LEWICKI), i, 1364.

mineral, in the animal organism (SASAKI), i, 331.

in lactation, effect of ultra-violet light on (ORR, MAGEE, and HENDERSON), i, 1210.

of cows (MONROE and PERKINS; MILLER, YATES, JONES, and BRANDT), i, 1498.

nitrogen, action of acetoacetic acid on (LABBÉ and LAVAGNA), i, 191.

of ruminants, effect of asparagine and ammonium nitrate on (STANZEWSKA), i, 1115.

and sulphur, relation between (WILSON), i, 729; (SEUFFERT, ITO, and YOKOYAMA), i, 730.

human, effect of iodides on (GRABFIELD and PRENTISS), i, 1002.

of isolated organs, effect of amino-acids on (MÉLON), i, 190.

phosphate (DEMUTH), i, 1497.

phosphoric acid, in the submaxillary gland (CAMIS), i, 191.

phosphorus, of moulds (SCHNÜCKER), i, 204.

of pigments (KORTSCHAGIN), i, 200.

protein, effect of ultra-violet light on (YOSHINE), i, 1356.

influence of liver on (ROSENBAUM), i, 464.

purine, in diabetes (LE BRETON and KAYSER), i, 610.

in man (HARFUDER), i, 613.

of sulphur (LEWIS), i, 1354.

tryptophan (ROBSON), i, 297.

**Metacyanilic acid**, and its salts and derivatives (WIELAND), i, 1048.

**Metaindene** (STOBBE and FÄRBER), i, 20.

- Metals, structure of** (CZOCHRALSKI), ii, 186.  
 theory of (FRENKEL), ii, 479.  
 mixed vapours of, absorption spectra of (BARRATT), ii, 927.  
 and their salts, cathode spectra of (KIMURA and NAKAMURA), ii, 166, 167.  
 reflective power of (EBELING), ii, 648.  
 electron theory of (ORNSTEIN), ii, 733.  
 kinetic theory of conduction of (DAVIES and LIVENS), ii, 630.  
 theory of conductivity of (CASSEL; WOLF), ii, 942.  
 electrical conductivity of (SIMON), ii, 94.  
   and their place in the periodic system (EPSTEIN), ii, 623.  
 electrical conductivity of films on (TAMMANN and BREDEMEIER), ii, 541.  
 effect of a magnetic field on the electrical resistance of (WILLIAMS), ii, 753.  
 photo-electric resistance of, at low temperatures (BARTLETT), ii, 943.  
 photo-electric effect on films of (GROSS), ii, 344.  
 used as electrodes, polarisation of (DRESBACH and HOSMER), ii, 1068.  
 electrodeposition of, from non-aqueous solutions (MÜLLER, PINTER, and PRETT), ii, 882.  
 deposition of, by molecular radiation (ESTERMANN), ii, 1053.  
   from pyridine (MÜLLER, HOLZL, KNAUS, PLANISZIG, and PRETT), ii, 133; (MÜLLER, HÖNIG, and KONETSCHNISS), ii, 134.  
 emission of electrons by (BECKER), ii, 616; (KOLLER), ii, 617.  
 electrode potential of (HEYROVSKÝ), ii, 404.  
 potentials of, against pure water (SMITS, GERDING, and KROON), ii, 795.  
 potential difference between electrolytes and (GUYOT), ii, 402.  
 potential changes in (DOWLING), i, 796.  
 fall of potential in the gas emitted from glowing (v. LAUE and SEN), ii, 7.  
 lattice constants of (DAVEY), ii, 747.  
 passivity of (BECKER and HILBERG), ii, 405; (RUSSELL), ii, 406.  
   influence of anions on (ROTHMUND, EISENKOLB, and STEINHERZ), ii, 131.  
 anodic behaviour and passivity of (SBORGI), ii, 550.
- Metals, influence of colloids on cathodic overvoltage of** (MARIE and LEJEUNE), ii, 115.  
 Hall and other effects in (HALL), ii, 846.  
 ionisation of (PISARSHEVSKI), ii, 210.  
 escape of positive ions from (GÜNTHER-SCHULZE), ii, 342.  
 free electrons with (HALL), ii, 252.  
 emission of electrons from films of, exposed to Röntgen rays (SIMONS), ii, 81.  
 bombardment of, by electrons (FARNSWORTH), ii, 169.  
 specific heat of (BEHRENS and DRUCKER), ii, 24.  
 heats of oxidation of (MOOSE and PARR), ii, 208.  
 relation between density and temperature of condensation of vapours of (ESTERMANN), ii, 962.  
 elastic modulus of (WIDDER), ii, 1043.  
 corrosion of (MAASS and LIEBREICH), ii, 140; (EVANS), ii, 688; (WHITMAN and RUSSELL), ii, 689.  
   by acids in capillaries (McCULLOCH), ii, 879.  
   by carbon tetrachloride (RHODES and CARTY), ii, 1084.  
   by naphtha solutions of sulphur and its compounds (WOOD, SHEELY, and TRUSTY), ii, 980.  
 self-diffusion in (HEVESY and OBRUTSHEVA), ii, 500.  
 velocity of diffusion of, in mercury (COHEN and BRUINS), ii, 648.  
 hardening of (SCHIEBOLD), ii, 186; (PÓLÁNYI; SACHS), ii, 370.  
 effect of temperature on hardness of (SAUERWALD and KNEHANS), ii, 279.  
 adhesion between surfaces of (SAUERWALD and JAENICHEN), ii, 387.  
 fusion of (JOUNIAUX), ii, 645.  
 effect of alloying and cold-drawing on crystals of (ROSBAND and SCHMIDT), ii, 488.  
 cold working of (GEISS and VAN LIEMPT), ii, 372.  
 tensile strength of, in relation to temperature and cold work (INGALL), ii, 190.  
 temper colours of (MASON), ii, 108; (BANGHAM and STAFFORD), ii, 138; (EVANS), ii, 288.  
 transparent films on (MÜLLER), ii, 1039.  
 deformation and recrystallisation of (GLOCKER), ii, 272.  
 volume of channels to the surface of (TAMMANN and BREDEMEIER), ii, 388.

**Metals**, change in volume of, during solidification (ENDO), ii, 281.  
 periodic dissolution of (HEDGES and MYERS), ii, 309.  
 equilibrium in systems of, in relation to the ideal solubility curve (ANDREWS and JOHNSTON), ii, 206.  
 equilibria of fused salts with (LORENZ), ii, 536, 537.  
 action of ammonium chloride vapour on (HOFMANN, HARTMANN, and NAGEL), ii, 685.  
 action of iodine on (PARSONS), ii, 880.  
 action of nitric acid on (DHAR), ii, 315.  
 affinity of, for sulphur (JELLINEK and ZAKOVSKI), ii, 401.  
 replacement of, from solutions of their salts (BERGSTROM), ii, 885.  
 precipitation of, from their salts, by metals in liquid ammonia (KRAUS and KURTZ), ii, 577.  
 of the cerium group, double nitrates of copper and cadmium with (CAROBBI), ii, 222.  
 colloidal. See Colloidal metals.  
 crystalline (GRÜNEISEN and GOENS), ii, 22, 488.  
 finely-divided, catalysis by (FORESTI), ii, 692.  
 of Group III, separation of, and phosphoric acid (JÄRVINEN), ii, 602.  
 heated, emission of ions from (ROY), ii, 731.  
 of the iron group and their alloys as catalysts (REMY and GÖNNINGEN), ii, 1176.  
 noble, catalytic action of (ZELINSKI and TUROVA-POLLAK), i, 1052.  
 of the platinum group, arc spectra of (MEGGERs), ii, 454.  
 colloidal, catalytic action of (PAAL and BORTERS), ii, 1072; (REMY and GÖNNINGEN), ii, 1176; (DUPARC, WENGER, and URFER), ii, 1177.  
 and their alloys, synthesis of water with (REMY and SCHAEFFER), ii, 563.  
 rare, fusion of ores of (SEARS and QUILL), ii, 580.  
 determination and separation of (MOSEER and LESSING), ii, 718.  
 strained, Röntgen ray analysis of (ONO), ii, 746.  
 determination of, in amalgams (RUSSELL and EVANS), ii, 1205.  
**Metal amines**, composition of ions of (DE WIJS), ii, 889.  
**Metal ammoniums** (KRAUS and JOHNSTON), ii, 389.

**Metal wires**, influence of occluded gas on the electrical resistance of (SEXL), ii, 642.  
 exploded, spectra of (SMITH), ii, 1017.  
 heated, emission of electrons by (ROLLA and PICCARDI), ii, 1018.  
**Metallic bromides**, decomposition potentials of, in molten aluminium bromide (ISBEKOV), ii, 796.  
 chlorides, vapour pressure of (MAIER), ii, 850.  
 use of, in decomposition of aliphatic acids (MAILHE), i, 503.  
 fused, electrical conductivity of (BILTZ and KLEMM), ii, 127.  
 couples, decomposition of water by (HEDGES and MYERS), ii, 306.  
 halides, ultra-violet absorption spectra of (GETMAN), ii, 837.  
 reduction of, by hydrogen (DE CARLI), ii, 51.  
 dithiolated, heats of chelation of (MORGAN, CARTER, and HARRISON), ii, 1042.  
 hydroxides, electrometric precipitation of (BRITTON), ii, 1203, 1204.  
 ageing of (FRIOKE), ii, 578.  
 amphoteric (JANDER and SCHULZ), ii, 701.  
 iodides, action of  $\alpha\beta$ -dibromo-compounds on (VAN DUIN), i, 802; (CONANT, KIRNER, and HUSSEY), i, 803.  
 and selenides, preparation of (FISCHER), ii, 808.  
 lustre (BANCROFT and ALLEN), ii, 658.  
 oxides, adsorption of vapours by (PEARCE and ALVARADO), ii, 381.  
 dissociation of (BORN), ii, 785.  
 reduction of, by alkali cyanides (HACKSPILL and GRANDADAM), ii, 419.  
 lower, preparation of (FRIEDRICH and SITTIG), ii, 889.  
 solid, reactions between (BALAREFF), ii, 893.  
 salts, scattering of light by solutions of (SWEITZER), ii, 512.  
 electrical conductivity as an indicator in titration of, with alkali hydroxides (DEMJANOVSKI), i, 1113.  
 temperature of vapours above boiling solutions of (BAHLKE and WILSON), ii, 514.  
 thermal ionisation of (ROLLA and PICCARDI), ii, 1018.  
 vapour pressure of (LORENZ and HERZ), ii, 493.  
 molecular volumes of, at the melting point (LORENZ and HERZ), ii, 840.

- Metallic salts**, solubilities of, in organic solvents (MÜLLER), ii, 380.  
 solvolysis of, in sulphuric acid (DAVIDSON), ii, 505.  
 compounds of, formed in the electric arc (PECZALSKI and MOKRZYCKI), ii, 814.  
 oxidation of, by oxygen (REINDERS and VLES), ii, 308.  
 polyatomic, dissociation of (SASAKI), ii, 512.  
 solid, electrical conductivity of, in relation to their spectra (VAILLANT), ii, 165.  
 separation of, by fractional precipitation (RUFF and HIRSCH), ii, 992.  
 See also Salts.  
 sulphates, thermal decomposition of (MARCHAL), ii, 870, 1162.  
 sulphides, electrolytic preparation of (FISCHER), ii, 807.  
 of the heavy metals, analysis of (FEIGL, PAVELKA, and SCHACHERL), ii, 70.  
 tellurides, preparation of (BRUKL), ii, 895.
- Metallography**, modified reflexion in (CZOCHELSKI), ii, 487.
- Metastability**, in relation to physical constants (COHEN), ii, 1138.  
 and allotropy (COHEN and HELDERMAN), ii, 23; (COHEN and MOESVELD), ii, 374, 950.
- Meta-stationary states** (SMEKAL), ii, 1022.
- Meteorites**, merrillite and chlorapatite in (SHANNON and LARSEN), ii, 321.  
 iron-nickel, structure of (VOGEL), ii, 709.
- Methæmoglobin** (CONANT and FIESER), i, 455.  
 formation of (NEILL and HASTINGS; KLEIN), i, 709; (MEIER), i, 1476.  
 re-formation of (SAKURAI), i, 1199.  
 oxidation-reduction of (NEILL), i, 868, 993.  
 oxygen content of (QUAGLIARIELLO), i, 39; (NICLOUX and ROCHE), i, 993.  
 determination of (CONANT and FIESER), i, 456.
- Methane**, catalytic formation of (CHAKRAVARTY and GHOSH), ii, 1175.  
 equilibria in formation of (NEUMANN and JACOB), ii, 532.  
 and its homologues, diffusion of light by (CABANNES and GAUZIT), ii, 1030.  
 critical potential of, and its ultra-violet absorption (GLOCKER), ii, 262.  
 influence of vapours of organic liquids on the inflammability of mixtures of air and (JORISSEN and MEUWISSEN), ii, 53.
- Methane**, halogen derivatives, reactivities of, with various reagents (PERRENKO-KRITSCHENKO, TALMUD, BUTMI DE KATZMAN, and GANDELMAN), ii, 802.  
 bromonitro-, reaction of aromatic compounds with, in presence of aluminium chloride (SHERRILL), i, 237.  
 bromodinitro-, potassium salt (TRÉNEL and WILKENDORF), i, 112.  
 bromotrinitro- (SCHMIDT, BARTHOLOMÉ, and ASMAS), i, 136.
- Methanedisulphonic acid**, barium salt (KOLKER and LAPWORTH), i, 353.
- Methanesulphonic acid**, chlorobromo-, optical activity of (READ and McMANUS), i, 1126.
- Methanesulphonyl groups**, directing influence of (TWIST and SMILES), i, 894.
- Methazonic acid**, cyano-. See Propionitrile,  $\beta$ -nitro- $\alpha$ -oximino-.
- Methenyl-5'-(5'-methyl)hydantoin-5-hydantoic acid**, bromo- (DAVIDSON and JOHNSON), i, 584.
- Methiodo-o-methyl- $\psi$ -geneserolimeithine** (POLONOVSKI and POLONOVSKI), i, 293.
- Methoxyacethydroxamic acid**, and its potassium salt and derivatives (JONES and POWERS), i, 14.
- 2-Methoxyacetophenone**, 4:6-dihydroxy- (SONN and BÜLOW), i, 1268.
- p-Methoxyacetophenone**, phenylhydrazones of (KORCZYŃSKI and KIERZEK), i, 973.
- Methoxyacetophenoneoximes** (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.
- 4(5'-Methoxy-4'-acetoxybenzylidene)-2-phenyl-5-oxazolone, 3'-nitro-** (SONN, MÜLLER, BÜLOW, and MEYER), i, 933.
- Methoxyacetylthranils** (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.
- $\gamma$ -Methoxyallene** (BOURGUEL), i, 770.
- Methoxyallyloxybenzaldehydes** (SONN and PATSCHKE), i, 1280.
- 6-Methoxyanthraquinone**, 3-amino-1:8-dihydroxy-, 1:8-dihydroxy-, and 1:3:8-trihydroxy- (EDER and HAUSER), i, 563.
- 3-Methoxyatophan**. See 3-Methoxy-2-phenylquinoline-4-carboxylic acid.
- 3-Methoxybenzaldehyde**, bromo and nitro derivatives, and their derivatives (HODGSON and BEARD), i, 675.
- 4-Methoxybenzaldehyde**, 5-nitro-2-hydroxy-, and its derivatives (BAO, SRISKANTIA, and IVENGAR), i, 675.

- Methoxybenzaldehydes, bromohydroxy- and nitrohydroxy-, and their *p*-nitrophenylhydrazones (RUBENSTEIN), i, 1279.
- 4-Methoxybenzamide, 3:5-*d*-nitro- (LINDEMANN and WESSEL), i, 1099.
- p*-Methoxybenzil, oximes of, and their derivatives (MEISENHEIMER, LANGE, and LAMPARTER), i, 1073.
- Methoxybenzils, dihydroxy-, and their diacetyl derivatives (MARSH and STEPHEN), i, 1158.
- 3-Methoxybenzoic acid, 4-bromo- (HODGSON and BEARD), i, 675.
- 4-Methoxybenzoic acid, 5-bromo-2-amino-, and its copper salt (GRIFFITH and HOPE), i, 827.
- o*- and *m*-Methoxybenzoic anhydrides (RULE and PATERSON), i, 29.
- Methoxybenzopyrones, 3-hydroxy- (PFEIFFER, OBERLIN, and KONERMANN), i, 1304.
- 2-Methoxy-*p*-benzoquinoneimine (KEHRMANN and HOEHN), i, 561.
- 1-Methoxy-2:3-benzoxazine (GRIFFITHS and INGOLD), i, 1190.
- o*-Methoxybenzoyl cyanide (MARSH and STEPHEN), i, 1158.
- 4-Methoxybenzoyl chloride, 3:5-*d*-nitro- (LINDEMANN and WESSEL), i, 1099.
- 4-Methoxybenzoylformic acid, 2-bromo-2-hydroxy- and 2-hydroxy- (FRIES and SAFTIEN), i, 570.
- Methoxybenzoyloxybenzamides (ANSCHÜTZ, ASCHENBERG, KUCKERTZ, KRONE, RIEPENKROGER, and ZERBE), i, 666.
- 6-Methoxybenzthiopyrone (KROLL-PFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.
- 2-*o*-Methoxybenzylidenecoumaranone, 4:6-*d*-hydroxy-, diacetyl derivative, and its derivatives (KALEF and ROBINSON), i, 1303.
- 2-Methoxybenzylidenediacetophenone (DILTHEY and FLORET), i, 56.
- p*-Methoxybenzylidenemalonie acid, ethyl ester (CHRSZASZCZEWSKA), i, 956.
- Methoxybenzylmandelic acids (MALKIN and ROBINSON), i, 559.
- 3-*p*-Methoxybenzylloxindole (WINDAUS and EICKEL), i, 33.
- Methoxybenzylloxymethoxybenzaldehydes (SONN and PATSCHKE), i, 1280.
- Methoxy- $\gamma$ -bromo- $\beta$ -methoxypropylbenzenes (SCHMIDT, BARTHOLOMÉ, and ASMAS), i, 136.
- Methoxychelidonias, and its salts and derivatives (GADAMER and WINTERFELD), i, 233.
- 4-Methoxy- $\omega$ -chloroacetophenone, 5-bromo-2-hydroxy- (FRIES and SAFTIEN), i, 570.
- p*-Methoxy- $\gamma$ -chloroallylbenzene (BERT), i, 804.
- 3-Methoxy-6- $\beta\beta$ -dichloroethyl-*p*-toluic acid (MELDRUM and ALIMCHANDANI), i, 1272.
- 3-Methoxy-6- $\beta\beta\beta$ -trichloro- $\alpha$ -hydroxyethyl-*p*-toluic acid, and its calcium salt and acetyl derivative (MELDRUM and ALIMCHANDANI), i, 1272.
- Methoxychromanones, and their derivatives (PFEIFFER, OBERLIN, and KONERMANN), i, 1304.
- 3-Methoxycinnamic acid,  $\alpha$ -amino- $\beta$ -5-nitro-4-hydroxy-,  $\alpha$ -benzoyl derivative (SONN, MÜLLER, BÜLOW, and MEYER), i, 933.
- p*-Methoxycinnamic acids, bromo- (HARIHARAN and SUDBOROUGH), i, 1149.
- 4-Methoxycinnamic anhydride (ROBINSON and SHINODA), i, 1301.
- p*-Methoxycinnamylidene-*m*-nitroacetophenone (GIUA), i, 1283.
- 6-Methoxycoumaran-2:3-dione (FRIES and SAFTIEN), i, 570.
- 6-Methoxycoumaran-3-one semicarbazone (SONN and PATSCHKE), i, 282.
- 6-Methoxycoumaran-3-one, bromo and chloro derivatives, and their derivatives (FRIES and SAFTIEN), i, 570.
- 2-oximino- (FRIES and SAFTIEN), i, 570.
- 6-Methoxycoumaran-3-one-2-*p*-aminoanil (FRIES and SAFTIEN), i, 571.
- 6-Methoxycoumaran-3-one-2-anil, and 5-bromo- (FRIES and SAFTIEN), i, 570.
- 6-Methoxycoumaran-3-one-2-*p*-dimethylaminoanil (FRIES and SAFTIEN), i, 570.
- 6-Methoxy-*m*-cresol, 5-bromo-2:4-*d*-nitro- (KOHN and MARBERGEN), i, 1265.
- $\alpha$ -Methoxy- $\alpha\beta$ -dibenzoyl ethylene (CONANT and LUTZ), i, 682.
- $\alpha$ -Methoxy- $\alpha\beta$ -di-(4-chlorobenzoyl)-ethylene (CONANT and LUTZ), i, 682.
- $\alpha$ -Methoxy- $\alpha\beta$ -di-(6-chloro-*m*-toluoyl)-ethylene (CONANT and LUTZ), i, 682.
- 7-Methoxy-4:3'-dicoumaryl (DEX and ROW), i, 150.
- $\alpha$ -Methoxy- $\alpha\beta$ -di-(2:4-dimethylbenzoyl)-ethylene (CONANT and LUTZ), i, 682.
- 5-Methoxy-1:2-dihydrocoumarone 3:6-dihydroxy-, and its diacetyl derivative (DEAN and NIERENSTEIN), i, 281.
- 3-Methoxy-9:10-dihydrophenanthrene-9-carboxylic acid, and its derivatives (WINDAUS and EICKEL), i, 33.

- 5-Methoxy-1:2-dihydro-3:6-quinocoumarone (DEAN and NIERENSTEIN), i, 281.
- Methoxydihydrothebenol (SPEYER and ROSENFELD), i, 962.
- 2-Methoxy-3:5-dimethylacetophenone, and its oxime (V. AUWERS, LECHNER, and BUNDESMAHN), i, 266.
- 4'-Methoxy-4''-dimethylamino-2:4-distyrylbenzopyrylium chloride, 7-hydroxy- (HEILBRON, WALKER, and BUCK), i, 694.
- 7-Methoxy-4'-dimethylamino-2-styryl-1-methyl-4-quinazoline (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.
- Methoxydimethyldehydroindoles, and their picrates (SPÄTH and BRUNNER), i, 574.
- Methoxydimethyl-4-quinazolones (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.

- 3-Methylcyclohexylacetic acid, ethyl ester (BECHERER), i, 665.
- $\beta$ - and  $\delta$ -Methylhexylamine, and their derivatives (DEWAELE and WECKERING), i, 3.
- 3-Methylcyclohexylethyl alcohol (BECHERER), i, 665.
- 1-Methyl-2-cyclohexylcyclohexane (GARLAND and REID), i, 1281.
- 1-Methyl-2-cyclohexylcyclohexanol (GARLAND and REID), i, 1281.
- 2-Methylcyclohexylhydroxylamine (VAVON and BERTON), i, 807.
- 1-Methylcyclohexylidene-4-acetic acid, rotatory dispersion of (RICHARDS and LOWRY), ii, 632.
- 3-Methylcyclohexylideneanthranilic acid, and its methyl ester (PERKIN and SEDGWICK), i, 64.
- 1-Methyl-2-cyclohexylidenecyclohexanol (GARLAND and REID), i, 1281.
- 1-Methyl-6-cyclohexylidene- $\Delta^1$ -cyclohexene (GARLAND and REID), i, 1281.
- $\alpha$ -3-Methylcyclohexylpropionic acid, and 1-hydroxy-, and their ethyl esters (BECHERER), i, 665.
- $\beta$ -3-Methylcyclohexylpropyl alcohol (BECHERER), i, 665.
- Methylcyclohexylsemicarbazides (VAVON and BERTON), i, 807.
- 4-Methylhydrindene, and tribromo- (KRUBER), i, 1138.
- 4-Methylhydrindenesulphonic acid, and its salts and amide (KRUBER), i, 1138.
- Methylhydrobenzoin, optically active, dehydration of (McKENZIE and ROGER), i, 25.
- 1-Methyl-4-*p*-hydroxybenzylhydantoin-3-acetic acid, and its derivatives (HAHN and RENFREW), i, 581.
- Methylhydroxyethylfumaric acid, derivatives of (KÜSTER), i, 922.
- Methylhydroxyethylmaleic acid, preparation of (KÜSTER and GRÄSSNER; KÜSTER), i, 922.
- Methylhydroxyglyoxime, metallic salts of (PONZIO and RUGGERI), i, 1041.
- 7-Methyl-4-*p*-hydroxy-*m*-methoxystyrylcoumarin (DEV and ROW), i, 953.

- 1-Methyl-3-hydroxymethylenecyclohexan-4-one, derivatives of (V. AUWERS, V. SASS, and WITTEKINDT), i, 1181.
- 5-Methyliminazoline, 2:5-diamino-, tetra-benzoate (FROMM, BARRENSCHEEN, FRIEDER, PIRK, and KAPPELLER), i, 595.
- Methylindazoles, and their derivatives, and dibromo-, tribromo-, and iodo- (V. AUWERS and LOHR), i, 74.
- Methylindazoles, 4-nitro- (V. AUWERS and FRESSE), i, 1102.
- 5-Methylindazole-2-carboxylic acid, ethyl and methyl esters (V. AUWERS and LOHR), i, 74.
- 7-Methylisindigotin, and its derivatives (WAHL and FAIVRET), i, 588.
- 7-Methylindirubin (WAHL and FAIVRET), i, 588.
- 2-Methylindole, 3-chloroacetyl derivative (KALLER & Co.), i, 297.  
picryl derivatives (KOROZYŃSKI and KIERZEK), i, 973.
- 2-Methylindole, 3-cyano- (SEKA), i, 67.
- 5-Methylindole-3-aldehyde (ROBSON), i, 298.
- 5-Methylindolylidenehydantoin (ODDO), i, 298.
- 2-Methylindolyl-2'-methylindolidene-methane, metallic derivatives (KUNZ and STÜHLINGER), i, 1319.
- $\alpha$ -Methylindyl- $\alpha$ -methylindolidene-methane, derivatives of (PFEIFFER, RHEINOLDT, and WOLF), i, 412.
- 2-Methylindyl-2-methylindolidene-phenylmethane-*o*-carboxylic acid, potassium salt (ODDO), i, 588.
- 7-Methylisatan (WAHL and FAIVRET), i, 588.
- 4- and 6-Methylisatin (MAYER and SCHULZE), i, 1315.
- 7-Methylisatin, derivatives of (WAHL and FAIVRET), i, 588.
- Methylisatoic anhydride (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.
- Methylisatoide, silver derivative (HANTZSCH), i, 701.
- Methylitamic acid, barium salt (INGOLD), i, 358.
- Methylketolephthalain. See Di-2-methylindylphthalide.
- Methylketole-yellow. See 2-Methylindyl-2-methylindolidenephenylmethane-*o*-carboxylic acid, potassium salt.
- Methyl ketones, formation of, from triglycerides and fatty acids by moulds (STÄNKLE), i, 205.
- Methyl-lichenin (SCHMID), i, 1386.
- Methylmaltoside, and its hepta-acetyl derivative (FREUDENBERG, V. HOCHSTETTER, and ENGELS), i, 635.
- Methylmercuric hydrogen carbonate and mercaptan (KOTEN and ADAMS), i, 236.  
trinitrobenzoate (KHARASCH and GRAFFLIN), i, 1107.
- 2-Methyl-1-methylenbenzthiazoline (KÖNIG and MEIER), i, 705.
- 6(?)-Methyl- $\alpha$ -methyl-*d*-glucoside (HELFERICH and BECKER), i, 10.
- Methylmorphimethines (SPEYER and KOULEN), i, 59.
- 2-Methylnaphthalene, 6-amino-, 5-amino-6-hydroxy-, 6-hydroxy-, 5-nitro-6-hydroxy-, and 5-nitroso-6-hydroxy-, and their derivatives (DZIEWOŃSKI, SCHOENÓWNA, and WALDMANN), i, 1056.  
amino-, bromo-, nitroamino-, and nitro-derivatives, and their derivatives (VESELY and KAPP), i, 246.  
1-bromo-4-nitro- (VESELY and KAPP), i, 804.
- 2-Methylnaphthalene-6-sulphonic acid, derivatives of (DZIEWOŃSKI, SCHOENÓWNA, and WALDMANN), i, 1057.
- 2-Methyl-5:6-naphthaquinone (DZIEWOŃSKI, SCHOENÓWNA, and WALDMANN), i, 1057.
- $\alpha$ -Methyl- $\beta$ -naphthoic acid, ethyl ester (V. AUWERS and MÖLLER), i, 404.
- $\Delta^1$ - $\alpha$ -Methyl- $\beta$ -naphthoic acid, ethyl ester (V. AUWERS and MÖLLER), i, 404.
- 2-Methylnaphthols, and bromo- (VESELY and KAPP), i, 246.
- 2-Methyl- $\alpha$ -naphthylamine, 5-bromo- and its acetyl derivative and 4-nitro- (VESELY and KAPP), i, 246.  
5-nitro-, and its acetyl derivative (VESELY and KAPP), i, 804.
- N-Methylnicotone (KARRER and WIDMER), i, 1034.
- N-Methylniquine and its derivatives (SUSZKO), i, 1449.
- 3-Methyl-1-*o*-nitrobenzoylpyrrole (V. AUWERS and DANIEL), i, 1181.
- Methylnitrobenzylindazolium iodides (V. AUWERS and PFUHL), i, 1101.
- 1-Methylnitrouracil triacetylxyloside (LEVENE and SOBOTKA), i, 1464.
- Methyl *n*-nonadecyl ketone (MORGAN and HOLMES), i, 514.
- 5-Methyl- $\Delta^7$ -nonadiene (GRIGNARD and DUBIEN), i, 112.
- 5-Methyl- $\Delta^7$ -nonen-5-ol (GRIGNARD and DUBIEN), i, 111.
- Methyl nonyl ketone (SCHIMMEL & Co.), i, 417.

- Methyl  $\epsilon$ -nonyl ketone (HESS and BAPPERT), i, 349.
- Methyl *n*-octadecyl ketone (MORGAN and HOLMES), i, 514.
- $\gamma$ -Methyl- $\Delta^{8,8}$ -octadiene (GRIGNARD and DUBIEN), i, 112.
- 10-Methyl-octahydroacridine, and its picrate (PERKIN and SEDGWICK), i, 65.
- 3-Methyl-octahydroindole, picrate of (V. BRAUN and BAYER), i, 429.
- $\gamma$ -Methyloctane- $\gamma$ -diol (GRIGNARD and DUBIEN), i, 112.
- $\beta$ -Methyloctanols (THOMS and KAHRE), i, 788.
- $\beta$ -Methyloctan- $\zeta$ -one, and its semicarbazone (THOMS and KAHRE), i, 788.
- $\gamma$ -Methyl- $\Delta^7$ -octen- $\epsilon$ -ol (GRIGNARD and DUBIEN), i, 112.
- $\gamma$ -Methyl- $\Delta^8$ -octen- $\gamma$ -ol (GRIGNARD and DUBIEN), i, 111.
- $\beta$ -Methyl- $\Delta^7$ -octenones, and their semicarbazones (THOMS and KAHRE), i, 788.
- Methyl orange (*helianthin*), formula of (THIEL), ii, 37.
- ionisation of (KOLTHOFF), ii, 296.
- 5-Methyloxazolidine, 2-imino-5-chloro-, and its derivatives (FROMM, BARRENSCHEEN, FRIEDER, PIRK, and KAPPELLER), i, 595.
- 5-Methyloxazoline, 2-amino-5-hydroxy-, tribenzoate (FROMM, BARRENSCHEEN, FRIEDER, PIRK, and KAPPELLER), i, 595.
- Methylisopelletierine (HESS and GRAU), i, 425.
- 1-Methylcyclopentan-5-one, methylation of, with benzaldehyde (HALLER and CORNUBERT), i, 1070.
- $\beta$ -Methyl- $\Delta^8$ -pentenal phenylhydrazone (V. AUWERS and KREUDER), i, 1454.
- $\alpha$ -Methyl- $\Delta^7$ -pentenoic acid (BHIDE and SUDBOROUGH), i, 1128.
- $\beta$ -Methyl- $\Delta^{\alpha}$ - and - $\Delta^{\beta}$ -pentenoic acids, and their derivatives (KON and LINSTEAD), i, 506.
- $\gamma$ -Methyl- $\Delta^8$ -penten- $\delta$ -one,  $\beta$ -hydroxy- (KAUFMANN and LIEPE), i, 1241.
- 4- $\gamma$ -Methyl- $\Delta^{\alpha}$ -pentenoyl-4'-dimethyl-aminoazobenzene, and its hydrochloride (THOMS and KAHRE), i, 789.
- $\gamma$ -Methylpentinen- $\gamma$ -ols, and their esters (RUPE and VONAESCH), i, 499.
- 9-Methylphenanthrene, synthesis of, and its picrate (WINDAUS, JENSEN, and SCHRAMME), i, 19.
- Methylphenazine, hydroxy- (KEHRMANN and CHERPILLOD), i, 303.
- Methylphenoxazine-*o*-quinone, condensation of, with *o*-aminophenol and *o*-diamines (KEHRMANN and WILD), i, 444.
- 5-Methylphenylene-1:3-diacetic acid, and its derivatives (V. BRAUN and ENGEL), i, 382.
- o*-Methylphthalimidine (GRIFFITHS and INGOLD), i, 1191.
- 6-Methylpicolinic acid, derivatives of (MEYER), i, 836.
- 6-Methyl-1:2-piperidazine-1:2-dicarboxylic acid, 3-chloro-, ethyl ester (DIEL, BLOM, and KOLL), i, 976.
- Methylprasinone, salts of (KEHRMANN and CHERPILLOD), i, 303.
- 1-Methylcyclopropane-1:2-dicarboxylic acids, and their derivatives (INGOLD), i, 358.
- 3-Methylcyclopropane-1:2-dicarboxylic acid, 2:3-dibromo-, methyl ethyl ester (GOSS, INGOLD, and THORPE), i, 550.
- Methylpropargylaniline, and its salts (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1401.
- Methylpropargylcyanamide (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.
- $\beta$ -Methyl- $\Delta^8$ -propene,  $\alpha$ -bromo- (MEREJKOVSKI), i, 878.
- 3-Methyl- $\Delta^1$ -cyclopropene-1:2-dicarboxylic acid, esters of (GOSS, INGOLD, and THORPE), i, 549.
- Methyl- $\Delta^{\alpha}$ -propinenyl ketone (YVON), i, 514.
- 5-Methylpropiofenone, 2-hydroxy-, oxime and semicarbazone (V. AUWERS, LECHNER, and BUNDESMANN), i, 266.
- Methylisopropylantracene picrate (PHILLIPS), i, 45.
- 1:4-Methylisopropylanthraquinone, and dinitro- (PHILLIPS), i, 45.
- o*-2:5-Methylisopropylbenzoylbenzoic acid (PHILLIPS), i, 45.
- Methyl-*n*-propylglycerol. See Heptane- $\beta$ - $\delta$ -triol.
- 1-Methyl-4-isopropylcyclohexanol-malonic acid, ethyl ester lactone (KÖTZ and HOFFMANN), i, 911.
- 2-Methyl-2-*n*-propylcyclohexanone, derivatives of (HALLER and CORNUBERT), i, 1071.
- 2-Methyl-5-isopropylcyclohexylacetic acid, 1-hydroxy-, ethyl ester (BECHERER), i, 665.
- 2-Methyl-5-isopropylcyclohexylethyl alcohol (BECHERER), i, 665.
- 2-Methyl-5-isopropylcyclohexylidene-1-acetic acid, sodium salt and ethyl ester (BECHERER), i, 665.

- $\alpha$ -2-Methyl-5-isopropylcyclohexylidene-propionic acid**, and its ethyl ester (BECHERER), i, 665.
- $\alpha$ -2-Methyl-5-isopropylcyclohexylpropionic acid**, 1-hydroxy-, ethyl ester (BECHERER), i, 665.
- $\beta$ -2-Methyl-5-isopropylcyclohexylpropyl alcohol** (BECHERER), i, 665.
- Methylpropylindazolium salts** (v. AUWERS and PFUHL), i, 1101.
- Methyl propyl ketones**, chloro-oximino- (RHEINOLDT and SCHMITZ-DUMONT), i, 1132.
- Methylpropylnonylcarbinols** (THOMS and AMBRUS), i, 789.
- $\gamma$ -2-Methyl-5-isopropylphenylpropinene** (BERT, DORIER, and LAMY), i, 1374.
- 3-Methyl-5-isopropylpyrazoline**, and its derivatives (LOCQUIN and HEILMANN), i, 837.
- 3-Methyl-4-*n*-propyl-5-pyrazolone** (HIRST, MACBETH, and TRAILL), i, 1251.
- 3-Methylpyrazole-1-carboxyl chloride** (v. AUWERS and DANIEL), i, 1181.
- Methylpyrazole-1-carboxylamides**, and 4-bromo- (v. AUWERS and DANIEL), i, 1181.
- 3-Methylpyrazole-1-carboxylic acid**, esters (v. AUWERS and DANIEL), i, 1180.
- Methylpyrazolines**, and their derivatives (FREUDENBERG and STOLL), i, 71.
- 1-Methyl-5-pyrazol-3-one** (v. AUWERS and MAUSS), i, 1179.
- Methylpyridine**, 2-thiol-, and its salts (KOENIGS and GEISLER), i, 166.
- 2-Methylpyridine**, 4:6-dichloro-5-cyano- (SPÄTH and KOLLER), i, 1446.
- 4-hydroxy-, and its 6-carboxylic acid (COLLIE and BISHOP), i, 974.
- 3-Methylpyridine**, 2-amino- (TSCHITSCHIBABIN; SEIDE), i, 1328.
- 2-chloro-, 2-hydroxy-, and nitro-amino-, and their derivatives (SEIDE), i, 72.
- 2-Methylpyridine-5-carboxylamide**, 4:6-dihydroxy- (SPÄTH and KOLLER), i, 1446.
- 1-Methyl-2-pyridone**, 3-nitro- (TSCHITSCHIBABIN and KONOVALOVA), i, 1329.
- 1-Methyl-4-pyridoneimine**, and its salts (TSCHITSCHIBABIN and OSSETROVA), i, 1328.
- 1-Methyl-2-pyridylnitroimine** (TSCHITSCHIBABIN and MENSCHIKOV), i, 437.
- 1-Methyl-2-pyridylnitroimine**, 3- and 5-nitro- (TSCHITSCHIBABIN and KONOVALOVA), i, 1329.
- N*-Methyl-2-(2-pyridyl)pyrrole**, and its picrate (TSCHITSCHIBABIN and BYLIN-KIN), i, 1174.
- 1-Methyl-2-pyrimidine**, 5-nitro-, and its salts (TSCHITSCHIBABIN and KONOVALOVA), i, 1329.
- 4-Methylpyrimidine-5-carboxylic acid**, 2-amino-, and its ethyl ester (MITTER and PAIT), i, 1320.
- Methylpyriminazole**, and its chloroplatinate (TSCHITSCHIBABIN), i, 1328.
- 2-Methyl-4-quinazalone**, 3-amino-, propionyl derivative, and 3-*m*-nitroamino-, benzoyl derivative (HELLER, GÖRING, KLOSS, and KÖHLER), i, 1323.
- 2-Methylquinoline** (*quinaldine*), salts of (TRÖGER and DUNKER), i, 433.
- 2-Methylquinoline**, 4-chloro-, derivatives of (FISCHER, DIEPOLDER, and WÖLFEL), i, 439.
- $\gamma$ -2-Methylquinoline-3-butyric acid**, 4-hydroxy- (PATERSON and PLANT), i, 1147.
- N*-Methyl- $\beta$ -isoquinotoxin** (SUSZKO), i, 1449.
- Methyl-red**, ionisation of (KOLTHOFF), ii, 296.
- N*-Methylaposafranone**, and its salts (KEHRMANN and CHERPILLOD), i, 303.
- Methylsuccinimide**, derivatives of, and *N*-chloro-, and *N*-hydroxy- (CHERBULIEZ and SULZER), i, 1252.
- Methyltartaric acid**, synthesis of (GOEBEL), i, 1038.
- Methyltetrahydroacridone** (PERKIN and SEDGWICK), i, 64.
- 7-Methyltetrahydroanthranil**, *O*-amino-, and its derivatives (v. AUWERS, BAHR, and FRESE), i, 312.
- Methyltetrahydrobenz-3:4- and -4:5-isoxazoles**, and 5-amino-derivative of the former (v. AUWERS, BAHR, and FRESE), i, 310.
- 5-Methyl-4:5:6:7-tetrahydroindazole**, and its picrate (v. AUWERS, v. SASS, and WITTEKINDT), i, 1182.
- 7-Methyl-4:5:6:7-tetrahydroindazole**, 3-amino-, and its salts and derivatives, and 3-bromo- (v. AUWERS, BAHR, and FRESE), i, 312.
- 5-Methyltetrahydroindazole-2-carboxylamide** (v. AUWERS, v. SASS, and WITTEKINDT), i, 1182.
- 7-Methyl-4:5:6:7-tetrahydroindazole-2-carboxylamide**, 3-amino- (v. AUWERS, BAHR, and FRESE), i, 311.
- 7-Methyltetrahydroindazolenaphthatriazine** (v. AUWERS, BAHR, and FRESE), i, 313.
- 1-Methyl-1:2:3:4-tetrahydronaphthalene**, 1:2-dihydroxy- (v. AUWERS), i, 241.
- Methyl- $\beta$ -8-(3:4:5:6-tetramethoxy)-phenanthrenylethylamine**, and its hydrochloride (OSADA), i, 233.

- p*-Methylthiobenzamide (SCHÖNBERG, ABELS DORFF, ANTONOFF, and KIRCH-RATH), i, 557.
- 4-Methylthiochroman-4-ol (KROLL-PFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.
- 6-Methylthiochromanone, and 3-*mono*- and 3:3-*di*-bromo-, and their derivatives (ARNDT), i, 1309.
- salts of (ARNDT and PUSCH), i, 1304.
- Methylthiochromanones, and their derivatives (KROLL-PFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.
- 4-Methyl- $\Delta^3$ -thiochromene (KROLL-PFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.
- 6-Methylthiochromonol, derivatives of, and 2-bromo-2-chloro-, and 2:2-*di*-chloro- (ARNDT), i, 1311.
- 6-Methylthiocoumarin, and its mercuri-chloride (THOMPSON and EDEE), i, 1442.
- 6-Methylthioflavanone, 3-*mono*- and 3:3-*di*-bromo-, and their derivatives (ARNDT), i, 1309.
- 6-Methyl-1-thioflavone, and 3-bromo-, 2:3-*di*bromo-, and their derivatives (ARNDT), i, 1309.
- 5-Methyl-2-thiohydantoin, and its derivatives (SJOELLEMA and SECKLES), i, 1175.
- m*-Methylthiolphenylmethylsulphone (TWIST and SMILES), i, 895.
- 5-Methylthiol-3-phenyl-2-tetradecyl-2:3-dihydro-1:3:4-thiodiazole (LANDA), i, 1039.
- 6-Methylthiol-*m*-toluic acid (ARNDT), i, 1311; (KROLL-PFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1306.
- 5-Methylthionaphthen-2-aldehyde, 3-hydroxy-, and its derivatives (KROLL-PFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1306.
- 2-Methylthiophen, and nitro- (CHRSZASZ-CZEWSKA), i, 956.
- 4-Methylthiophen-2:3:5-tricarboxylic acid (SEKA), i, 1299.
- Methyl *p*-tolyl ketone, chloro-oximino- (RHEINOLDT and SCHMITZ-DUMONT), i, 1132.
- 1-Methyl-1:2:3-triazole-4:5-dicarboxylic acid, and its methyl ester (GRISCHKEVITSCH-TROCHIMOVSKI and KOTKO), i, 1104.
- Methyl-tribenzoyl- $\alpha$ -methyl- $\beta$ -glucoside (HELFERICH and BECKER), i, 10.
- 8-Methyl- $\Delta^8$ -tridecene (THOMS and AMBRUS), i, 790.
- 6-Methyl-2:3:5-triketopiperazine (BERGMANN, MIEKELEY, and KANN), i, 1134.
- Methyltrimethylammonium iodide, hydr-oxy-, acetyl derivative, and iodo-, action of, on the nervous system (HUNT and RENSHAW), i, 861.
- Bz-3-Methyltryptophan, synthesis of (ROBSON), i, 297.
- 5-Methylumbelliferone-4-acetic acid (MÜLLER), i, 1443.
- 1-Methyluracil xyloside and triacetyl-xyloside (LEVENE and SOBOTKA), i, 1454.
- Methyluracils, alkylated, action of form-aldehyde on (SCHMEDES), i, 435.
- Methylurethane, nitroso-, reaction of pyrocatechol tannins with (VOGEL), ii, 827.
- 1-Methyluric acid, oxidation of, in alkaline solution (PIAUX), i, 165.
- $\gamma$ -Methylvaleryl chloride,  $\alpha$ -bromo- (ABDERHALDEN and ROSSNER), i, 975.
- $\gamma$ -Methylvalerylpiperazine, 1:4-*di*bromo- (ABDERHALDEN and ROSSNER), i, 975.
- Methylvanillin, preparation of (BRINER, v. TSCHARNER, and PAILLARD), i, 1069.
- Methylvasicine, hydroxy- (SEN and GHOSH), i, 958.
- Methylvinylcarbinol, resolution and rotation of, and its esters (KENYON and SNEELGROVE), i, 771.
- Methylvinylmaleic anhydride (KÜSTER), i, 922.
- Methyl- $\beta$ -xylosides, rotation of (HUDSON), i, 232.
- Mica, hydrolysis of (ZEMIATTSCHENSKI), ii, 814.
- orientation of ammonium iodide on (ROYER), ii, 270.
- Micas, classification of (HALLIMOND), ii, 819.
- Mica group (WINCHELL), ii, 592.
- Microbes (*micro-organisms*), effect of toxicity of the medium on life-period of (PAYLOV), ii, 958.
- action of the electric current on (KLEIBER), i, 1509.
- reduction by (FERRO), i, 340.
- energy balance in growth of (TERROINE, TRAUTMANN, and BONNET), i, 1117.
- decomposition of amino-acids and proteins by (WAKSMAN and LOMANITZ), i, 867.
- in soils, effect of hydrogen-ion concentration on (RIPPEL), i, 220.
- liberation and fixation of iodine by (v. FELLEBERG and GELINGER), i, 339.
- utilisation of paraffin by (TAUSSON), i, 479.

- Microbes** (*micro-organisms*), fermentation of sugars by (KLUYVER and DONKER), i, 1215.  
formation of plant vitamins by (MOCKBRIDGE), i, 106.
- Microsiphonae**, utilisation of nitrogen by, in soils (GUITTONEAU), i, 106, 341.
- Microtome** for cutting gels (FRICKE), ii, 965.
- Milk**, action of hydrogen ions in coagulation of (COSMOVICI), i, 608.  
arsenic in, after injection of salvarsan (FORDYCE, ROSEN, and MYERS), i, 189.  
bacteriolytic power of (J. and M. BORDER), i, 616.  
effect of heat on solubility of calcium and phosphorus compounds of (BELL), i, 998.  
separation of the Schardinger enzyme from (HOPKINS and DIXON), i, 1506.  
perhydridase of (SBARSKY and MICHLIN), i, 472.  
inorganic phosphates in (VLADESCOU), i, 1114.  
phosphorus compounds in (KAY), i, 998.  
effect of replacement of proteins by urea in diet on production of (MORGAN, WINDHEUSER, and OHLMER), i, 217.  
xanthine oxydase of (THURLOW), i, 743.
- cows**, constituents of (BLEYER and KALLMANN), i, 184.  
influence of sunlight on properties of (LUCK), i, 211.  
precipitation of calcium from (ROTHWELL), i, 1850.  
citric acid in (KIEFERLE, SCHWABOLD, and HACKMANN), i, 855.  
yellowish-green colouring matter of (BLEYER and KALLMANN), i, 457.
- cows and human**, phosphorus content of (HESS and HELMAN), i, 1204.  
vitamins in (PRINGLE), i, 1018.  
dried and evaporated, vitamin content of (HARTWELL), i, 751.
- Milk-agar**, use of, in bacterial investigations (SLOBODSKA-ZAYKOVSKA), i, 1510.
- Milk-serum**, organic phosphorus compounds in (PFYL and SAMTER), i, 1114.
- Milkweed**. See *Asclepias syriaca*.
- Millon's base**, decomposition of the iodide of (PETRIKALN), ii, 630.
- Mineral sulphides**, electrosynthesis of sols of (v. HAHN), ii, 522.
- Mineral waters**. See under Water.
- Minerals**, density of (PANICHI), ii, 64.  
absorption of oxygen and water by (KURNAKOV), ii, 767.  
transformation of, by replacement of gels (LINDGREEN), ii, 392.  
of the mica group (WINCHELL), ii, 592.  
determination of the age of (KIRSCH), ii, 320.  
fusion mixture for separation of (OLERICI), ii, 594.
- "Misch metal"**, cerium-free, preparation of (THOMPSON and KREMERS), ii, 580.
- Mists** from chemical reactions (REMY and RUHLAND; REMY and KOCH), ii, 107.
- Mixtures**, binary, influence of chemical constitution on the thermal properties of (PASCAL), ii, 953.  
vapour pressure of (BROWN), ii, 377.
- Molecular association** (ROCARD), ii, 1045.  
of organic liquids (LANGE), ii, 840.  
and the equation of state (JÄRVINEN), ii, 865.  
diameter, calculation of (SIRK), ii, 184.  
field, determination of (JONES), ii, 16, 91, 92.  
and molecular volume (BATSCHINSKI), ii, 932.  
symmetry and optical activity (DARMOIS), ii, 1119.
- Molecules**, structure of (MÜLLER), ii, 363; (CABRERA), ii, 1107.  
formation and decomposition of (PÓLÁNYI and WIGNER), ii, 1077.  
refraction and electron constraint in (SMYTH), ii, 843, 1019.  
magnetic properties of (WILSDON), ii, 641.  
collisions between (FRANCK), ii, 836.  
hydration of (FRIOKE), ii, 36.  
anisotropy of (RAMANATHAN), ii, 478.  
diameter of (SIRK), ii, 864.  
in isomerides (WÖHLISCH), ii, 269.  
determination of cross-section areas of (MACK), ii, 1124.  
activation of (DHAR), ii, 214.  
dipolar, electric moment of (EBERT), ii, 262.  
polyatomic polar, configuration of (HUND), ii, 479.
- Molybdenum**, K-series spectrum of (ALLISON and DUANE), ii, 260; (RICHTMYER and SPENCER), ii, 1101.  
wave-length of K $\alpha$  rays of (COMPTON and WOO), ii, 1128.  
Röntgen ray spectra of (ALLISON), ii, 724; (ALLISON and ARMSTRONG), ii, 1015.  
X-ray absorption coefficient of (WARBURTON and RICHTMYER), ii, 1103.  
pure, electrical properties of (GEISS and VAN LIEMPT), ii, 638.

- Molybdenum**, electron emission from (DUSHMAN, ROWE, EWALD, and KIDNER), ii, 345.  
critical potential in (PETRY), ii, 1017.  
temperature scale and melting point of (WORTHING), ii, 759.
- Molybdenum alloys**, chemical resistance of (GUERTLER and LIEPUS), ii, 1146.  
with aluminium and nickel and with nickel and tin (PFAUTSCH), ii, 536.  
with chromium and nickel (SIEDSCHLAG), ii, 298.  
with nickel and silicon (PFAUTSCH), ii, 298.
- Molybdenum compounds**, complex (SCAGLIARINI), ii, 891.  
tervalent (WARDLAW and PARKER), i, 893.
- Molybdenum dibromide**, and its derivatives (LINDNER and HELWIG), ii, 421.  
*dichromate* (CALCAGNI), ii, 891.  
halides, action of, with ammonia and with potassamide in liquid ammonia (BERGSTROM), ii, 1033.  
*trioxide*, volatility of, and its formation from the sulphide (BRINTON and STOPPEL), ii, 72.  
*pentoxide* (WARDLAW and NICHOLLS), ii, 817.  
selenide (MOSER and ATYNSKI), ii, 583.
- Molybdenyl chloride** (WARDLAW and WORMELL), ii, 61.
- Molybdic acid**, complex compounds of, with pyrocatechol and pyrogallol (FERNANDES), i, 912, 1061.
- Molybdates**, isomorphism of (ZAMBONINI and LEVI), ii, 1133.
- Dithiomolybdates** (TER MEULEN), ii, 584.
- Molybdosulphites of the rare earths** (CANNERI and FERNANDES), ii, 888.
- Molybdovanadates** (CANNERI), ii, 891.
- Molybdenum organic compounds** :—  
**Molybdic acid**, compounds of organic acids with (HONNELAITRE), i, 509.  
alkyl and aryl ammonium salts (KRAUSE and KRAUSKOPF), i, 908.
- Molybdenum determination and separation** :—  
determination of, colorimetrically (TER MEULEN), ii, 830; (WENDEHORST), ii, 718.  
determination of, as trioxide (HARTMANN), ii, 1206.  
separation of, from vanadium (STOPPEL, SIDENER, and BRINTON), ii, 718.
- Molybdomalic acid**, ammonium salt, effect of hydroxy compounds on rotation of (DARMOIS and HONNELAITRE), ii, 184.
- Molybdosulphites and Molybdovanadates**. See under Molybdenum.
- Monascus purpureus*, colouring matter from (HIBINO), i, 1118.
- Monocotyledons**, starch-free, carbohydrate enzymes of (CHAPMAN), i, 215.
- Monosaccharides**, constitution of (HIRST and ROBERTSON), i, 364.  
condensation of, with dilute mineral acids (LEVENE and ULPTS), i, 1042.  
degradation of mercaptals of (PACSU), i, 515.
- Monotropitin**, enzymic hydrolysis of (BRIDEL), i, 615.
- Monotropitoside**, preparation and properties of (BRIDEL and PICARD), i, 1027.
- Montanic acid**, montanyl ester (FARGHER and HIGGINBOTHAM), i, 880.
- Mordanting**, theory of (ELÖN), ii, 531.
- Morinidin chloride** (WILLSTÄTTER and SCHMIDT), i, 54.  
and its 3:2':4'-trimethyl ether and perchlorate (PRATT and ROBINSON), i, 826.
- Morphine**, and its derivatives, physiological action of (ZAMPARO), i, 1116.  
arsenious tartrate (DEBUCQUET), i, 1090.  
determination of, by titration with silicotungstic acid (SAS), ii, 1011.
- Morphine alkaloids** (WIELAND and KOTAKE), i, 1448.  
structure of (WIELAND and KOTAKE), i, 1090.
- Mosses**, respiration and imbibition in (MAYER and PLANTFOL), i, 1120.
- Mother-of-pearl**, structure of (SHAXBY), ii, 93.
- Moulds**, formation of citric and gluconic acids by (BUTKEVITSCH), i, 341.  
formation of methyl ketones by (STÄRKLE), i, 205.  
phosphorus metabolism of (SCHNÜCKE), i, 204.  
utilisation of quinic acid by (BUTKEVITSCH), i, 1511.  
decomposition of uric acid by (MORRIS and ECKER), i, 478.
- Mucic acid**, and its salts (KHOTINOKA and EPIFANOVA), i, 783.  
nephropathic action of (ROSE and DIMMERT), i, 733.
- Mucilage from plants** (KOMATSU and UEDA), i, 762.

- Mullite**, formation of, from cyanite, andalusite, and sillimanite (GREIG), ii, 987.  
 crystal structure of sillimanite and (NAVIAS and DAVEY), ii, 1127.
- Muscarine** in fungi (GUTH), i, 1247.
- Muscle**, effect of ions on the functions of (ABRAHAM and KAHN), i, 728;  
 (LANGE and MAYER; DEUTICKE), i, 729.  
 synthesis of carbohydrates in (MEYER-HOF, LOHMANN, and MEIER), i, 727.  
 re-synthesis of carbohydrates in (JANSSON and JOST), i, 1354.  
 relation between pancreas and carbohydrate metabolism of (FOSTER), i, 1495.  
 production of carbon dioxide by (LIPSCHITZ and MEYER), i, 603.  
 carnosine in, in relation to excretion of iminazole (HUNTER), i, 459.  
 contraction of (GARNER), i, 607.  
 function of creatine in (TIEGS), i, 1003.  
 formation of lactic acid in (FURUSAWA), i, 849.  
 creatine content of (REISSER and HAMANN), i, 860.  
 influence of polynneuritis on (KUDRJAYZEVA), i, 329.  
 influence of ions on the decomposition of glycogen in (WEBER), i, 1004.  
 changes of glycogen and phosphates in (v. EULER, MYRBÄCK, and KARLSSON), i, 744.  
 effect of insulin on oxidation in (AHLGREN; NITZESOU and COSMA), i, 482.  
 effect of calcium on the synthesis of lactacidogen in (EMMRICH and LANGE), i, 728.  
 effect of sodium salts on the synthesis of lactacidogen in (EMBDEN, KAHLERT, and LANGE), i, 728.  
 lactic acid in, during fatigue (HENTSCHL), i, 728.  
 oxidation of lactic acid in (v. SZENT-GYÖRGYI), i, 708.  
 killed by insulin, lactic acid in (BAUR and KÜHN), i, 482.  
 isoelectric points of proteins of (WÖHLISCH and SCHRIEVER), i, 1488.  
 colloidal properties of proteins of (WEBER), i, 995.  
 sugars in juice of (CONSTANTINO), i, 720.  
 cod's, autolysis of (CALLOW), i, 469.  
 fatigued, phosphate metabolism in (ANDREWS), i, 729.
- Muscle**, frog's, formation of acetaldehyde in (NEUBERG and GOTTSCHALK), i, 859.  
 action of fluorides on the activity and metabolism of (EMBDEN and HENTSCHL), i, 727.  
 striated, effect of narcosis on (LANGE and MAYER), i, 735.  
 plain, physiology of (TSUBURA), i, 1004.  
 smooth, action of narcotics on (JOACHIMOGLU), i, 735.
- Muscovite**, orientation of ammonium iodide crystals on the surface of (ROYER), ii, 110.
- Muscular exercise**, supply and utilization of oxygen in (FURUSAWA), i, 993.  
 effect of, on respiration and lactic acid (FURUSAWA, HILL, LONG, and LUPTON), i, 92;  
 (LYTHGOE and PEREIRA; PEREIRA), i, 1341.  
 effect of, on composition of urine (LILJESTRAND and WILSON; WILSON, LONG, THOMPSON, and THURLOW), i, 1115.
- Mustard**, white. See *Sinapis alba*.
- Mutarotation** (RIEBER), i, 8;  
 (RIEBER, ESP, and BERNER), i, 635;  
 (RIEBER, SÖRENSEN, and THORKELSEN), i, 773;  
 (LOWRY; LOWRY and RICHARDS), i, 886;  
 (KUHN and JACOB), ii, 49.  
 kinetics of (v. EULER, ÖLANDER, and RUDBERG), ii, 876.
- Mycorrhiza**, activity of enzymes in (MELIN and HELLEBERG), i, 745.
- Myogen**, isoelectric point and stability of (WEBER), i, 995.
- Myoporum laetum** (ngaio), constituents of (MCDOWALL), i, 1521.
- Myosin**, isoelectric point and solubility of (WEBER), i, 995.
- Myricetin**, synthesis of (KALFF and R. ROBINSON), i, 423;  
 (DEAN and NIERENSTEIN), i, 951.  
 5:7:3':4':5-pentamethyl ether (SONN, MÜLLER, BÜLOW, and MEYER), i, 938.
- Myristaldehyde p-nitrophenylhydrazone** (STEPHEN), i, 1131.
- Myristic acid**, hydroxylamine salt (OESPER and BALLARD), i, 1238.  
 thallous salt (HOLDE and TAKEHARA), i, 1238.  
 3-hydroxybenzaldehyde-2-mercuric ester (WELLCOME FOUNDATION, LTD., HENRY, and SHARP), i, 1152.

N.

3'- $\beta$ -Naphthacoumaryl-4- $\alpha$ -naphthapyrone (DRY and ROW), i, 149.

- $\beta$ -Naphthacridine-12-carboxylic acid**, 10-amino-, acetyl derivative (SAFTIEN), i, 1318.
- 1:6-Naphthadiquinoline**, and its sulphate (ARMIT and ROBINSON), i, 1172.
- Naphthalanil**,  $\alpha$ -amino-, and its derivatives (CHAKRAVARTI), i, 162.
- $\alpha$ -Naphthaldehyde** *p*-nitrophenylhydrazone (STEPHEN), i, 1181.
- Naphthalene**, structure of (FUSON), i, 253; (LESSER, KRANLPUHL, and SAD), i, 1424.  
constitution and nitration of (ODELO), i, 804.  
molecular heat and viscosity of solutions of (DE KOLOSOVSKI), ii, 1163.  
boiling point of (FINCK and WILHELM), ii, 759.  
surface tension of solutions of, in benzene (SCHECHTMANN), ii, 1148.  
solubility of, in tetrachloroethane (COHEN, DE MEESTER, and MOESVELD), ii, 190, 852.  
pyrogenic decomposition of, in presence of aluminium and nickel oxides (IPATIEV and KIJUKWIN), i, 241.  
derivatives, hydrogenated, formation and spectrochemistry of (V. AUWERS and MÖLLER), i, 402; (V. AUWERS), i, 815.  
analysis of, and its sulphonic acids (CALCOTT, ENGLISH, and DOWNING), ii, 78.
- Naphthalene**, 1:3:4-*tri*amino-, and 3-nitro-1:4-*di*amino-, acetyl derivatives (PANIZZON-FAVRE), i, 145.  
2:7-*di*hydroxy-, derivatives of (LESSER, KRANLPUHL, and SAD), i, 1426.  
2-iodo-5- and -8-nitro- (CHUDOŽILOV), i, 908.
- Naphthalenes**, hydrogenated (STRAUS, BERNOULLY, and MAUTNER), i, 1155.
- Naphthalenes**, *tri*amino-, and their hydrochlorides and *di*nitro- (FINZI), i, 701.  
bromonitro- (VESELÝ and CHUDOŽILOV), i, 1056.
- Naphthalene series**, hydrogenation in (ROWE and TARBETT), i, 317.
- 1-Naphthaleneazo-2-hydroxynaphthalene**, 1'-amino-2':4'-*di*hydroxy- (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 989.
- $\alpha$ -Naphthaleneazo- $\alpha$ -tetrahydro- $\alpha$ -naphthylamine** (ROWE and TARBETT), i, 817.
- Naphthalene-3-carboxylic acid**, 2-hydroxy-, constitution of (LESSER, KRANLPUHL, and SAD), i, 1424.
- Naphthalenedisulphonic acids**, benzyl- $\psi$ -thiocarbamide salts (CHAMBERS and SCHERER), i, 127.
- Naphthalene-2-sulphoiodide** (GIBSON, MILLER, and SMILES), i, 1137.
- Naphthalene-2-sulphonic acid**, metallic salts, and their solubilities (EPHRAIM and PFISTER), i, 896.
- Naphthalene-3-sulphonic acid**, 1-cyano-, and its salts (FARBWERKE FORM. MEISTER, LUCIUS, & BRÜNING), i, 1426.
- Naphthalene-5-sulphonic acid**, 1-chloro-, metallic salts, and their solubilities (EPHRAIM and PFISTER), i, 897.
- Naphthalenesulphonic acids** (AMBLER, LYNCH, and HALLER), i, 126.  
arylamine salts (FORSTER and KEYWORTH), i, 126.  
benzyl- $\psi$ -thiocarbamide salts (CHAMBERS and SCHERER), i, 127.
- $\alpha$ - and  $\beta$ -Naphthalenesulphonylalanines**, and their salts (COLLES and GIBSON), i, 137.
- 2-Naphthalenethiolsulphonic acid**, 6-methoxy-*m*-tolyl and 2:4-xylyl esters (GIBSON, MILLER, and SMILES), i, 1137.
- Naphthalic acid**, preparation of (WHISTON), i, 140.
- 1:8-Naphthalic acid**, derivatives of (MASON), i, 33, 34.
- 1:8-Naphthalyl chloride**, preparation properties and derivatives of (MASON), i, 84.
- 3-Naphthamido-*p*-cresols**, 5-chloro-, and 5-chloro-3:5'-bromo-, and their derivatives (RAIFORD and LANKELMA), i, 810.
- Naphthaphenanthrazine**, amino-, acetyl derivative (PANIZZON-FAVRE), i, 145.
- Naphthaphenazine**, 3-hydroxy-, and its acetyl derivative (KEHRMANN and CHERPILLOD), i, 303.
- 3- and 4-hydroxy-** (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 304.  
2:3-*di*hydroxy-, and its diacetyl derivative (KEHRMANN and SCHEDLER), i, 441.
- $\alpha\beta$ -Naphthaphenazinesulphonic acids** (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 304.
- Naphthaphenfluorindine** (KEHRMANN and SCHEDLER), i, 442.
- $\alpha\beta$ -Naphthaphenoxarsine**, 7-chloro- (AESCHLIMANN), i, 706.
- $\alpha$ -Naphthapyrone-4-*p*-dimethylaminophenylethylene**. See 4-*p*-Dimethylaminostyryl- $\alpha$ -naphthapyrone.
- $\alpha$ -Naphthapyrone-4-*p*-methoxyphenylethylene**. See 4-*p*-Methoxystyryl- $\alpha$ -naphthapyrone.
- $\beta$ -Naphthaquinol monohydrate** (STRAUS, BERNOULLY, and MAUTNER), i, 1155.

- $\alpha$ -Naphthaquinoline-6,7-dicarboxylic acid** (STEWART), i, 975.
- $\alpha$ -Naphthaquinone**, action of magnesium phenyl bromide on (FRANSSSEN), i, 1146.
- derivatives of (SOCIÉTÉ ANONYME DES MATIÈRES COLORANTES), i, 413.
- 1:4-Naphthaquinone**, 2:3-diamino-, derivatives of (FRIES and BILLIG), i, 938.
- 2-nitro-, attempted synthesis of (PANIZZON-FAVRE), i, 144.
- Naphthaquinones**, action of organo-magnesium compounds on (FRANSSSEN), i, 1146.
- $\beta$ -Naphthaquinone-1-*p*-acetamidophenylimine** (LANTZ and WAHL), i, 820.
- 1:4-Naphthaquinone-4-anil**, 5- and 6-amino-, acetyl derivatives (SANDER), i, 982.
- 1- $\beta$ -Naphthaquinone-1-anisylimine** (LANTZ and WAHL), i, 820.
- $\beta$ -Naphthaquinonearylimines** (LANTZ and WAHL), i, 820, 1159.
- 1:4-Naphthaquinonediphenylimine**, 2-hydroxy- (LANTZ and WAHL), i, 820.
- $\beta$ -Naphthaquinone-1-*o*-methoxyanil** (LANTZ and WAHL), i, 1159.
- Naphthaquinonyl thiosulphates**, potassium salts (HELLER), i, 315.
- $\alpha$ -1:4-Naphthaquinonyl-3-acetoacetic acid**, 2-amino-, acetyl derivative, ethyl ester (FRIES and BILLIG), i, 940.
- Naphtharhodamines** (MASON), i, 34.
- $\beta$ -Naphthathioflavone** (SCHÖNBERG, ROSENBAACH, KRÜLL, and OSTWALD), i, 1300.
- Naphthazinesulphonic acids**, colouring matters from (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 1330.
- Naphthenic acids** (TANAKA and NAGAI; TANAKA, NAGAI, and ISHIDA), i, 252.
- from Nishiyama petroleum (TANAKA and NAGAI), i, 1271.
- conversion of, into ketones (ZELINSKI and RJACHINA), i, 39.
- 1':2'-Naphthiminazole-2-benzoic acid** (CHAKRAVARTI), i, 162.
- Naphthiminazoletrimethylcyclopentane-carboxylic acids** (CHAKRAVARTI and GUPTA), i, 981.
- $\alpha$ -Naphthiminoisothio- $\alpha$ -naphthamide** (ISHIKAWA), i, 1149.
- 3-Naphthoacetamide**, 2-hydroxy-, and its acetyl derivative (LESSER, KRANLPUHL, and SAD), i, 1425.
- Naphthoic acid**, hydroxy-, alkali vanadyl salts (ROSENHEIM and MONG), i, 1412.
- $\alpha$ -Naphthoic acid**, 6-amino-, and its acetyl derivative (DZIEWONSKI, SOHOENÓWNA, and WALDMANN), i, 1057.
- $\beta$ -Naphthoic acid**, 1-bromo-2-hydroxy-, and 2-hydroxy-, salts and derivatives of (LESSER, KRANLPUHL, and SAD), i, 1425.
- 7-bromo-3-hydroxy-, and its derivatives (CHEMISCHE FABRIK GRIESHEIM-ELEKTRON), i, 599.
- $\alpha$ -Naphthol**, reaction of phenylcarbylamide with (PASSERINI), i, 1298.
- detection and determination of, in  $\beta$ -naphthol (CALLAN), ii, 444.
- $\alpha$ -Naphthol**, 6-amino-, acetyl derivative (SANDER), i, 982.
- 5-bromo- (FUSON), i, 254.
- 6- and 7-bromo- (FUSON), i, 540.
- 2-nitro-4-amino-, acetyl derivative (PANIZZON-FAVRE), i, 145.
- $\beta$ -Naphthol**, catalytic dehydration of methyl alcohol and (PLÜSS), i, 1410.
- derivatives of, with chloral hydrate and dimethylaniline (SAKOSCHANASKY), i, 1061.
- determination of, oxidimetrically (TÄUFEL and WAGNER), ii, 1007.
- $\alpha$ - and  $\beta$ -Naphthols**, distinction between (ZAMPARO), ii, 444.
- and their derivatives, molecular compounds of (WEISSENBERGER, SCHUSTER, and MAYER), ii, 766.
- additive compounds of, with ketones (PFLEIFFER, GOEBEL, and ANGERN), i, 271.
- $\beta$ -Naphtholazobenzene-*p*-sulphonic acid**. See Orange-II.
- $\beta$ -Naphthol-4-carboxylic acid**, preparation of (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 1426.
- $\alpha$ - and  $\beta$ -Naphtholcoumarins** (SEN and SIRCAR), i, 554.
- $\beta$ -Naphthol-6-sulphonic acid**, metallic salts, and their solubilities (EPHRAIM and PFISTER), i, 897.
- Naphthoxanthene**, 8-hydroxy- (SEN and SARKAR), i, 813.
- 1-Naphthoxyacetyl bromide** (FRIES and PUSCH), i, 569.
- $\alpha$ -Naphthoyl chloride**, 5-bromo- (RAIFORD and LANKELMA), i, 810.
- $\beta$ -1-Naphthoyleacrylic acid** (BOGERT and RITTER), i, 816.
- 1:2(1':8')-Naphthoylenebenziminazole** (CHAKRAVARTI), i, 162.
- 1:2(1':8')-Naphthoylene-4-methylbenziminazole** (CHAKRAVARTI), i, 162.
- 1:2(1':8')-Naphthoylene-1:3-naphthiminazole** (CHAKRAVARTI), i, 162.

- 1-Naphthoylformanilideanil, 2-hydroxy- (SAFTIEN), i, 1318.
- 2-Naphthoylformic acid, 1-hydroxy-, and 2-hydroxy-, anilide (FRIES and PUSCH), i, 569.
- 3- $\alpha$ - and - $\beta$ -Naphthoylperylene, 4:10-dichloro- (ZINKE, FUNKE, MATSCHER, WOLFBauer, and LORBER), i, 1436.
- $\alpha\beta$ -Naphthoithiazole-3-carboxylic acid, and its derivatives (STOLTE, GIESEL, and BADSTÜBNER), i, 1466.
- Naphthyl thiosulphates, dihydroxy-, potassium salts (HELLER), i, 315.
- $\alpha$ -Naphthyl ethyl ether, 4-iodo- (TANAKA), i, 1061.
- $\alpha$ - and  $\beta$ -Naphthyl benzyl ethers (v. BRAUN and REICH), i, 1405.
- $\alpha$ -Naphthyl groups, migration of (LUCE), i, 263.
- $\alpha$ -Naphthylamine dichloroacetate (DOUGHTY), i, 805.
- $\alpha$ -Naphthylamine, 4-bromo- and 4-chloro-3-nitro- (PANIZZON-FAYRE), i, 145.
- $\beta$ -Naphthylamine, catalytic reduction of (HARA), i, 536.
- hydroferricyanide (CUMMING), i, 122.
- $\alpha$ - and  $\beta$ -Naphthylamines, *m*-nitrobenzenesulphonamides (MARVEL, KINGSBURY, and SMITH), i, 245.
- $\beta$ - $\alpha$ - and - $\beta$ -Naphthylaminobenzylmalonic acids, ethyl esters (WAYNE and COHEN), i, 550.
- $\alpha$ -Naphthylaminocaraphor, phototropism of, in chloroform (SINGH), ii, 195.
- 2- $\beta$ -Naphthylamino-3-hydroxy-1:4-naphthaquinone (FRIES and BILLIG), i, 939.
- 3-Naphthylamino-5-ketoisooxazoles (WORRALL), i, 308.
- 3-Naphthylamino-5-ketopyrazoles (WORRALL), i, 308.
- 2- $\beta$ -Naphthylamino-1:4-naphthaquinone, 3-chloro-2-*N*-nitroso- (FRIES and BILLIG), i, 939.
- 1- $\alpha$ - and - $\beta$ -Naphthylaminonaphthylamines (LEVI and FALDINO), i, 171.
- 2- $\alpha$ - and - $\beta$ -Naphthylamino-5-phenyl-1:3:4-thiadiazines, and their derivatives (BOSE), i, 1466.
- 2-Naphthylbenzotriazole,  $\alpha$ -amino-,  $\alpha$ -hydroxy-, and  $\beta$ -nitroso- (ELES), i, 185.
- $\alpha$ - and  $\beta$ -Naphthyl benzyl ketones (LUCE), i, 264.
- 1:4-Naphthylene dibenzoate (PANIZZON-FAYRE), i, 145.
- 1:2-Naphthylenediamine, 4-amino-, acetyl derivative (PANIZZON-FAYRE), i, 145.
- aminoazines from (KEHRMANN and SAFAR), i, 1331.
- 1:4-Naphthylenedihydrazinetetracarboxylic acid, ethyl and methyl esters (STOLTE and ADAM), i, 1469.
- $\beta$ -Naphthyl-3:4-dihydroxy- $\alpha$ -naphthylsulphone, and its derivatives (HINSBERG), i, 1062.
- 1-Naphthylimino- $\beta$ -naphthaquinone (SOCIÉTÉ ANONYME DES MATIÈRES COLORANTES), i, 413.
- 3- $\beta$ -Naphthyl-2-methyl-*lin*-naphthiminazole-4:9-quinone (FRIES and BILLIG), i, 939.
- 2- $\beta$ -Naphthyl-4-methylpyrimidine-5-carboxylic acid, and its ethyl ester (MITTER and PALIT), i, 1320.
- N*-(1')-Naphthyl-naphthalimide, 2'-amino- (CHAKRAVARTI), i, 162.
- $\beta$ -Naphthyl-1- $\beta$ -naphthaquinonylsulphone, and its derivatives (HINSBERG), i, 1062.
- Naphthyl-naphthylenediamines, and their derivatives (LEVI), i, 436, 1186.
- $\beta$ -Naphthyl-4-nitropiaseleazonium chloride (BATTEGAY and VÉCHOT), i, 1468.
- $\alpha$ - and  $\beta$ -Naphthylquinoxalines, hydroxy derivatives (FRIES and PUSCH), i, 569.
- 5- $\alpha$ -Naphthyl-2-thion-2:3:4:5-tetrahydro-1:3:4-thiadiazole (GUHA and RAY), i, 703.
- $\alpha$ -Naphthyl-*p*-tolylsulphone (GILMAN, BRABER, and MYERS), i, 1057.
- 6-Naphthyl-1:3:5-triazine, 2:4-diamino-6-*p*-hydroxy- (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 441.
- Naphthyridine group, syntheses in the (GULLAND and ROBINSON), i, 1186.
- Narcosis (LANGE and MAYER), i, 735.
- mineral composition of blood in (BLANCHETIERRE and CARDOT), i, 455.
- action of, on smooth muscle (JOACHIMOGLU), i, 735.
- Narcotine, salts, dissociation of, and extraction of the alkaloid from solutions (FABRE and PARINAUD), i, 962.
- Natural water. See under Water.
- Nebulium, spectrum of (ROSSELAND), ii, 3; (LEMON), ii, 1099.
- Neodymium, preparation and properties of (KREMER), ii, 588.
- pole-effect in spectrum of (MOHR), ii, 612.
- Röntgen ray spectrum of (GLEDITSCH and BOTOLFSEN), ii, 612.
- Neodymium oxide, spectrum of (NICHOLS), ii, 259.
- sulphate, double salts of thallous sulphate and (ZAMBONINI and CAGLIOTI), ii, 1185.

- Neodymium** potassium sulphate (ZAMBONINI and CAGLIOTI), ii, 222, 315.
- Neoline**, and its derivatives (SCHULZE and BERGER), i, 233.
- Neon**, spectrum of (CHILDS), ii, 339; (Goudsmit), ii, 450; (BURNS; DORGELO), ii, 1099.
- reversal of rays in the spectrum of (BUISSON and JAUSSEAN), ii, 333.
- absorption spectra of, and of its mixtures with argon and helium (MEISSNER), ii, 1099.
- arc spectrum of, and its ionisation potentials (HERTZ), ii, 723.
- spark spectrum of (L. and E. BLOCH and DÉJARDIN), ii, 334.
- ultra-violet spectrum of (LYMAN and SAUNDERS), ii, 911.
- Zeeman effect with (BACK), ii, 341.
- electrical properties of (MCALLUM and FOCKEN), ii, 641.
- ionisation potential of (HERTZ and DE VISSER), ii, 339.
- in vacuum tubes (RIDING and BALY), ii, 925.
- atomic field of (JONES), ii, 253.
- emission of light by mixtures of solid nitrogen and (VEGARD, ONNES, and KEESOM), ii, 474.
- isotherms of (HOLBORN and OTTO), ii, 851.
- absorption in (MEISSNER; JORDAN), ii, 337.
- Neopelline** (SCHULZE and BERGER), i, 233.
- Neosine**, detection of (FLÖSSNER and KUTSCHER), i, 327.
- Nephelometer**, new (KINGSLAKE), ii, 821.
- Nephelometry** (KLEINMANN), ii, 339.
- Nephritis**, nitrogenous substances in urine in (MOSONYI), i, 1491.
- Nernst filaments**, construction of (GRIF-FITH), ii, 896.
- Nerves**, production of carbon dioxide by (PARKER), i, 849.
- frogs, excretion of carbon dioxide by (PARKER), i, 1353.
- Nervone** (KLENK), i, 1346.
- Nervous system**, formation of ammonia in (WINTERSTEIN and HIRSCHBERG), i, 607.
- effect of arsonium, phosphonium, and sulphonium compounds on (HUNT and RENSHAW), i, 861.
- central, glycogen and cerebroside metabolism of (WINTERSTEIN and HIRSCHBERG), i, 1495.
- Nessler's reagent**, preparation of (RICHMOND), ii, 327; (FREDERICK), ii, 435.
- without potassium iodide (WINKLER), ii, 713.
- Neurosyphilis** (MYERS and CORBITT; CORNWALL and MYERS), i, 611.
- Neutral-red**, toxicity of (POLITZER), i, 197.
- Neutral salt action** and electrical field of ions (DEBYE and MCAULAY), ii, 171.
- Newt**, small water. See *Triton taeniatrus*.
- Ngaio**. See *Myoporum laetum*.
- Ngaio**, and its derivatives (MCDOWALL), i, 1521.
- Ngaione**, and its derivatives (MCDOWALL), i, 1521.
- Nickel**, occurrence of, in arable soils (BERTRAND and MOKRAGNATZ), i, 492.
- occurrence of, in soils, plants, and animals (MCHARGUE), i, 1023.
- spectrum of (BECHERT), ii, 1014.
- arc spectrum of (WALTERS), ii, 335; (BECHERT and SOMMER), ii, 913.
- line spectrum of (WORTHING and RUDY), ii, 1102.
- spark spectrum of (L. and E. BLOCH), ii, 727.
- pure, magnetic properties of (MALCOLM), ii, 371.
- films, magnetic properties of (SORENSEN), ii, 82.
- magnetic anisotropy of (FORRER), ii, 486, 639.
- non-magnetic films of (OSEEN), ii, 734; (INGERSOLL and DE VINNEY), ii, 846.
- magnetisation of iron and (DE WAARD; PESCHARD), ii, 751.
- magnetisation of iron, cobalt, magnetite, and (ASHWORTH), ii, 944.
- magnetostriuctive effects in (McCORKLE), ii, 487.
- pure, electrical properties of (GRISS and VAN LIEMPT), ii, 638.
- films, electrical conductivity and Hall effect in (RIEDE), ii, 355.
- electro-deposition of (EMELIANOVA), ii, 676.
- quantitative deposition of, from oxalate electrolytes (FRÖLICH), ii, 604.
- conductivities of (SCHOFIELD), ii, 273.
- critical potential in electron emission from (PETRY), ii, 1017.
- current-potential curves for (LIEBREICH and WIEDERHOLT), ii, 404.
- polarisation of (TRIANDAFIL), ii, 405.
- passivity of (ROTHMUND, EISENKOLB, and STEINHERZ), ii, 131; (EISENKOLB), ii, 1165.
- atomic heat of (RODEBUSH and MICHALEX), ii, 949.
- heat of adsorption of hydrogen on (FORESTI), ii, 692.

- Nickel**, transformation of, at the Curie point (DEL REGNO), ii, 372.  
 solubility of, in water containing carbon dioxide (ROBL), ii, 231.  
 electrolytic solution of, in sulphuric acid (ROLLER), ii, 799.  
 physical state and catalytic activity of (GAUGER), ii, 1072.  
 catalytic reduction with (FELDMANN), i, 1263.  
 catalytic reduction of acetaldehyde with (NEGOSHI), i, 1375.  
 catalytic, promoter action of thoria on (RUSSELL and TAYLOR), ii, 1071.  
 effect of thiophen on the action of (KUBOTA and YOSHIKAWA), ii, 805.  
 inactivation of, by impurities (ARMSTRONG and HILDITCH), ii, 562.  
 colloidal, sols of, in benzene and toluene (HATSCHKE and THORNE), ii, 197.  
 reduced, composition of (KUBOTA and YOSHIKAWA), ii, 1174.  
 catalytic action of (KOMATSU and YUKITOMO), i, 687; (KOMATSU and TANAKA), i, 905.  
 catalytic activity of reduced copper, thoria, and (KOMATSU and MASUMOTO), ii, 1071.  
 in the animal organism (BERTRAND and MACHEBEUF), i, 719.
- Nickel alloys** with aluminium and molybdenum and with molybdenum and tin (PFAUTSCH), ii, 536.  
 with carbon and iron (KASE), ii, 973.  
 with chromium and molybdenum (SIEDSCHLAG), ii, 298.  
 with copper (CHEVENARD), ii, 851.  
 oxidation of (FILLING and BEDWORTH), ii, 689.  
 with iron (DELORAIN), ii, 639; (GRENET), ii, 973.  
 magnetic properties of (YENSEN), ii, 372.  
 thermomagnetic properties of (PESCHARD), ii, 651.  
 effect of tension on magnetic properties of (BUCKLEY and McKEEHAN), ii, 945.  
 expansion coefficients of (HONDA and OKUBO), ii, 104.  
 temper colours of (TAMMANN and SIEBEL), ii, 1169.  
 with molybdenum and silicon (PFAUTSCH), ii, 298.
- Nickel compounds** in vegetables (BERTRAND and MOKRAGNATZ), i, 873.
- Nickel salts**, rotatory dispersion of (ROBERTS), ii, 478.
- Nickel chloride**, magnetic properties of (WOLTJER; WOLTJER and ONNES), ii, 1088.
- Nickel hydroxide**, magnetic properties of (VEIL), ii, 412.  
 solution and precipitation of, in water (VEIL), ii, 183.  
 precipitation of, electrometrically (BRITTON), ii, 1203.  
 nitrate, action of phosphorus on (SCHMOSS), ii, 889.  
 suboxide (LEVI and TACCHINI), ii, 424.  
 oxide, reduction of, by hydrogen (BENTON and EMMETT), ii, 216.  
 effect of chlorine on catalysis by (BOSWELL and BAYLEY), ii, 215.  
 selenide (MOSER and ATYNSKI), ii, 533.  
 sulphate, hydrated, solubility of (TANCOV), ii, 852.
- Nickel organic compounds** :—  
 with diacetyldioxime (PANETH and THILO), i, 1132.
- Nickel detection, determination, and separation** :—  
 detection and determination of (FEIGL and CHRISTIANI-KRONWALD), ii, 330; (SOULE), ii, 603.  
 determination of (JÄRVINEN), ii, 602.  
 determination of, as dioxide (MOSER and MAXYMOWICZ), ii, 1206.  
 determination of, in presence of iron and cobalt (WEELDENBURG), ii, 72.  
 separation of cobalt, manganese, zinc, and (LEMARCHANDS), ii, 242.  
 separation of, from iron (ARDAGH and BROUGHALL), ii, 603.  
 separation of iron and, in presence of chromium (ROUSSEAU), ii, 441.  
 separation of zinc and (KLING and LASSIEUR), ii, 439.
- Nickel wire**, magnetic spectrum of (ARKADIEV), ii, 82.
- Nicotine**, rotation of (PATTERSON and FULTON), ii, 1120.  
 configuration of, and its oxidation (KARRER and WIDMER), i, 1084.  
 adsorption of, by calcium salts (CHAPIN), i, 697.  
 separation of, from ammonia, and its decomposition by enzymes (FODOR and REIFENBERG), i, 1519.
- Nicotinic acids**, derivatives of (MEYER), i, 836.
- $\alpha$ -Nicotyrine**. See *N*-Methyl-2-[2-pyridyl]pyrrole.
- Niobium**, arc spectrum of (MEGGERS), ii, 167.
- Niobium carbide and nitride** (FRIEDERICH), ii, 374.  
 nitride (FRIEDERICH and SITTIG), ii, 420.  
 oxide, visible radiation of (NICHOLS), ii, 350.

**Niobium detection, determination, and separation:—**

detection and determination of, and its separation from tantalum (POWELL and SCHÖELLER), ii, 1096.  
determination of, and separation from iron (PIED), ii, 442.

**Niquine, and dibromo-, and their derivatives, and *N*-nitroso-** (SUSZKO), i, 1449.

**Nitella**, adsorption of dyes by cell sap of (IRWIN), i, 1363.

**Niton (*radium emanation*)**, radioactive constant of (CURIE and CHAMIE), ii, 8.

decay constant of (BASTINGS), ii, 621.

ionisation potential of (GLOCKLER), ii, 1105.

rate of transformation of (CURIE), ii, 463.

number of ions produced by, in a spherical volume (MUND), ii, 732.

action of, on hydrocarbons (MUND and KOCH), i, 625.

perfusion experiments with calcium and (ZWAARDEMAKER, FEENSTRA, and STEYNS), i, 193.

effect of, on growth of rats (CHICK and TAZELAAR), i, 211.

**Nitrates.** See under Nitrogen.

**Nitration** (SCHAARSCHMIDT, BALZER-KIEWIOZ, and GANTE), i, 532; (KLEMENC and SCHÖLLER), ii, 212.

at high temperatures, apparatus for (KRANZ and KOPECKY), ii, 319.

new method of (SCHAARSCHMIDT), i, 123.

with nitrates (MENKE), i, 386, 655.

with mixed nitrosulphonic and fuming nitric acids (VARMA and KULKARNI), i, 238.

**Nitric acid.** See under Nitrogen.

**Nitrides**, preparation and properties of (FRIEDERICH and SITTIG), ii, 419.

**Nitrification by bacteria in acid solutions** (GAARDER and HAGEM), i, 480.

in soils (GIBBS, BATCHELOR, and MAGNUSON), i, 1030.

**Nitriles**, synthesis of (HARA and KOMATSU), i, 893.

catalytic reduction of (ROSENMUND and JORDAN), i, 245; (GRIGNARD and ESCOURROT), i, 931.

action of magnesium organic compounds on (BRECKPOT), i, 14; (BRUYLANTS), i, 15; (CHRISTIAEN), i, 23; (EOTORS), i, 138; (JASPERS), i, 986.

condensation of thioamides with (SHIKAWA), i, 917, 1149.

**Nitrites.** See under Nitrogen.

**$\alpha$ -Nitro-acids**, aliphatic, action of hydrazine hydrate on halogen derivatives of (MACBETH and TRAILL), i, 628.

**Nitro-alcohols**, aliphatic (TRÉNEL and WILKENDORF), i, 112.

**Nitroamide**, catalytic decomposition of (BRÖNSTED and DUUS), ii, 982.

**Nitroamino-groups**, determination of (LEHMSTEDT and ZUMSTEIN), ii, 1201.

**Nitro-compounds**, physical properties of (DESVERGNES), i, 1056; ii, 490.

reduction of, by calcium hydride (DURAND and HOUGHTON), i, 646.

action of sulphites and hydrogen sulphites on (RASCHIG), i, 239.

aromatic, ionisation of, in liquid ammonia (FIELD, GARNER, and SMITH), ii, 792.

reduction of (WEST), i, 535; (VESELY and CHUDOŽILOV), i, 654.

**Nitrogen**, structure and valency of (WAHL), ii, 937.

atomic, and its arc spectrum (COMP-  
TON), ii, 910; (KIESS), ii, 911.

atom, asymmetric (WEDEKIND and  
UTHE), i, 536, 1059; (WEDEKIND),  
i, 678.

tervalent, asymmetric compounds of  
(HESS and GRAU), i, 425.

nuclei, ejection of protons from  
(BLACKETT), ii, 256.

spectrum of (MERTON and PILLEY), ii,  
333.

band spectrum of (HULTHÉN and  
JOHANSSON; JOHNSON), ii, 11;  
(LINDAU), ii, 11, 625; (FAS-  
BENDER), ii, 850; (MERTON and  
PILLEY; BIRGE and HOPFIELD), ii,  
737.

infra-red emission spectrum of  
(PFUND), ii, 11.

line spectrum of (CROZE), ii, 77, 166.

ionised, line spectrum of (FOWLER),  
ii, 250.

spark spectrum of (KIESS), ii, 4.

solid, luminescence of (MCLENNAN,  
ii, 88; (VEGARD), ii, 630.

and its mixtures with neon  
(VEGARD, ONNES, and KEE-  
SOM), ii, 474.

fluorescence radiation of (OLDENBERG),  
ii, 1116.

magnetic susceptibility of (GLASER),  
ii, 82.

diamagnetism of, at low pressures  
(GLASER), ii, 642.

electrical properties of (MCALLUM  
and FOCKEN), ii, 641.

heat of dissociation of (EUCKEN), ii,  
207.

**Nitrogen**, molecular heat of (SCHREINER), ii, 97.  
 reproduction of electrical conditions of the afterglow of (CAMERON), ii, 172.  
 temperature-entropy diagram for (RODEBUSH, ANDREWS, and TAYLOR), ii, 492.  
 isotherms of (HOLBORN and OTTO), ii, 851.  
 absorption of, in water (BECKER), ii, 106.  
 solubility of, in liquid ammonia (LARSON), ii, 852.  
 fixation of, by the electric arc process (KARRER), ii, 987.  
   Haber equilibrium for (GILLESPIE), ii, 532.  
   as sodium cyanide (GUERNSEY and SHERMAN), ii, 889.  
   in soils (WINTERS), i, 767; (TRUFFAUT and BEZSSONOFF), i, 1227.  
   in soils of the Punjab (LAUDER and ALI), i, 1524.  
 explosion of mixtures of acetylene and (GARNER and SAUNDERS), ii, 627.  
 attempts to prepare a new chloride of (NOYES), ii, 988.  
 reaction of hydrogen with, in presence of mercury vapour (NOYES), ii, 573.  
 sources of available, for higher plants (BIALOSUKNIA), i, 1366.  
 residual, distribution of, in the organism (MADSEN), i, 718.  
 excretion of, in urine (SCHIMIZU; TAKANOSU), i, 185.  
   effect of ethyl acetate and other substances on (BYLSMA), i, 1856.  
**Nitrogen trichloride**, heat of formation of (NOYES and TULEY), ii, 644.  
 iodide, composition of (RASCHIG), ii, 147.  
 monoxide (*nitrous oxide*), solubility of, in electrolytes (MANCHOT, JAHRSTORPER, and ZEPTER), ii, 282.  
 thermal and catalytic decomposition of (HINSHELWOOD and PRICHARD), ii, 810.  
 adsorption of, by glass (BANGHAM and BURT), ii, 657.  
 catalytic decomposition of, on gold (HINSHELWOOD and PRICHARD), ii, 567.  
 solid, structure of (DE SMEDT and KEESOM), ii, 484.  
 dioxide (*nitric oxide*), preparation of (NOYES), ii, 993.  
   electrical formation of (SCHWAB and LOEB), ii, 150.

**Nitrogen dioxide** (*nitric oxide*), rate of oxidation of (LATSHAW and PATRICK; HASCHE and PATRICK), ii, 681.  
 oxidation reactions with (KLEMENC), ii, 407.  
 dissociation equilibria of compounds of ferrous salts with (MANCHOT and HAUNSCHILD), ii, 298; (MANCHOT and LINKH), ii, 317.  
 formation of nitrous acid from nitric acid and (ABEL and HARASTY), ii, 139.  
 action of sodium ethoxide on (HESS), i, 58; (TRAUBE), i, 110.  
 analysis of, colorimetrically (WHITE and TOLMAN), ii, 682.  
 detection of (EGERIWE), ii, 156.  
*isodioxide* (RASCHIG), ii, 146.  
*per- or tetr-oxide*, adsorption of, by silica gels (RAY), ii, 191.  
 action of, on copper (KLEMENC and SCHROTH), ii, 228.  
 action of, on hydrocarbons (SCHAARSCHMIDT), ii, 227.  
 additive compounds of olefines and (SCHAARSCHMIDT and HOFMEIER), i, 877.  
*pentoxide*, decomposition of (HUNT and DANIELS), ii, 801.  
 thermal decomposition of (HIRST), ii, 554.  
 velocity of decomposition of (WHITE and TOLMAN), ii, 682.  
 reactions of, with organic compounds (HAINES and ADKINS), i, 801.  
**Nitrosenitrogen trioxide** (HASCHE), ii, 988.  
**Nitrogen oxides**, compressibility of (BATUECAS), ii, 497.  
 reduction of, in presence of sulphuric and sulphurous acids (GRAIRE), ii, 227.  
 determination of, by absorption (SCHLESING), ii, 599.  
 determination of, in air and in combustion products of coal gas (FRANCIS and PARSONS), ii, 713.  
**Nitric acid** (KLEMENC and SCHÖLLER), ii, 212.  
 constitution of (HANTZSCH and WOLF), ii, 634.  
 synthesis of (PASCAL), ii, 566.  
 vapour pressure of solutions of (TAYLOR), ii, 767.  
 action of, on metals (DHAR), ii, 315.  
 formation of nitrous acid from nitric oxide and (ABEL and HARASTY), ii, 139.

**Nitrogen:—**

- Nitric acid**, reduction of, by stannous and titanous chlorides (COBLENS and BERNSTEIN), ii, 804.
- Nitrates**, formation of, in soils (RUSSEL, JONES, and BAHRT), i, 1031.
- detection of (MARVEL and DU VIGNEAUD), ii, 240; (VÁGI), ii, 599; (HAHN), ii, 1095; (HAHN and JAEGER), ii, 1199; (EKKERT), ii, 1200.
- detection of, by the diphenylamine reaction (EKKERT), ii, 1093.
- determination of (HIBBARD), ii, 240.
- Pernitric acid** (POLLAK), ii, 407.
- Nitrous acid**, decomposition of, by light and by catalysts (MUKERJI and DHAR), ii, 691.
- reactions of sulphurous acid with (RASCHIG), ii, 146.
- Nitrites**, oxidation of (REINDERS and VLÉS), ii, 308.
- Tromsdorff reagent for (COQUILLAT), ii, 328.
- detection of (VÁGI), ii, 599; (HAHN and JAEGER), ii, 1199; (EKKERT), ii, 1200.
- detection of, colorimetrically (NOVELLI), ii, 900.
- Nitrogen tetraselenide and tetrasulphide** (VAN VALKENBURGH and BAILAR), ii, 993.
- persulphide* (USHER), ii, 581.
- Nitrogen organic compounds**, spectrochemistry of (v. AUWERS and KRAUL), ii, 847.
- availability of, in pot experiments (CROWTHER), i, 1371.
- heterocyclic, synthesis of (MINUNNI), i, 1175.
- Nitrogen determination:—**
- determination of, by Kjeldahl's method (FLEURY and LEVALTIER), ii, 434.
- determination of, by modified Kjeldahl methods (FLEURY and LEVALTIER; SHAW), ii, 66; (MARKLEY and HANN), ii, 824.
- determination of, microchemically (ROSE), ii, 900.
- determination of, in blood (OSBORN), i, 323.
- determination of, in explosives (MARQUEYROL, CHENEL, FRIEDERICH, FLORENTIN, KOEHLER, and LORIETTE), ii, 599.
- determination of, in nitrates, by Kjeldahl's method (MARGOSCHES, SCHEINOST, and WOYNAR; MARGOSCHES and SCHEINOST), ii, 1094.
- determination of, in oil, coke, and proteins (TER MEULEN), ii, 599.

**Nitrogen determination:—**

- determination of, in organic compounds (HESLINGA), ii, 65; (TER MEULEN), ii, 66.
- determination of, in proteins (MAIN and LOCKE), i, 997.
- determination of distribution of, in proteins (GORTNER and SANDSTROM), ii, 908.
- inhibition of bumping in determination of, in soils (HANCE), i, 1032.
- amino-, determination of, in bacterial metabolism (PARSONS and STURGES), i, 1509.
- Nitroglauherite** (FOOTE), ii, 786.
- Nitro groups**, replacement of benzoyl groups by (ELION), i, 44.
- Nitroimino groups**, determination of (LEHMSTEDT and ZUMSTEIN), ii, 1201.
- Nitronium salts** (HANTZSCH and WOLF), ii, 635.
- Nitroprussic acid**, sodium salt, action of, on acetone and acetaldehyde (VAN URK), ii, 162.
- Nitrosochlorination** (RHEINBOLDT and SCHMITZ-DUMONT), i, 1131.
- Nitroso compounds**, constitution of (GOLDSCHMIDT and CHRISTMANN), i, 649.
- action of sulphites and hydrogen sulphites on (RASCHIG), i, 239.
- Nitroso groups**, influence of, in aromatic substitution (INGOLD), i, 646.
- Nitrosonitrogen**. See under Nitrogen.
- Nitrososulphites**. See Dinitrososulphonates under Sulphur.
- Nitrosulphonic acid**, nitration with a mixture of fuming nitric acid and (VARMA and KULKARNI), i, 283.
- Nitrosyl chloride**, formation of (TRAUTZ and SCHUETER), ii, 552.
- velocity of formation of (TRAUTZ and GERWIG), ii, 878.
- photochemical decomposition of (BOWEN and SHARP), ii, 695.
- condensations with (SCHAEPSCHMIDT and RAEBCK), i, 830.
- reactions with (RHEINBOLDT and SCHMITZ-DUMONT), i, 1131.
- Nitrous acid**. See under Nitrogen.
- Nitroxyl bromide and chloride**, preparation of, and their reactions with Grignard reagents (ZUSKINE), ii, 587.
- Nobili's rings**, colours of (CHUCKUBUTTI), ii, 744.
- Nonaldehyde**,  $\alpha$ -hydroxy-, and its derivatives (HELPERICH and SCHÄFER), i, 7.
- Nonanediols**, and their di-*p*-nitrobenzoates (PIERCE and ADAMS), i, 825.
- Nona-oxymethylene diacetates** (STAUDINGER and LÜTHY), i, 361.

Non-electrolytes, relation of, to rare gases in melting and boiling points (CARLSOHN), ii, 1044.

$\Delta\beta$ -Noninene (BOURGUEL), i, 770.

Non-metals, relations between hydrides and alkyl compounds of (V. GROSSE), ii, 843.

Nonodilactone (BENNETT), i, 883.

Nonoic acid, sodium salt, effect of sodium hydroxide on surface tension of (HARKINS and CLARK), ii, 857.

Nopinene, oxidation of, with permanganate (BRUS), i, 47.

Nor-*m*-hemipinic acid, ethylimide of (SPÄTH and DOBROWSKY), i, 1085.

Northebenine, cyano- (SPEYER and ROSENFELD), i, 962.

Novocaine, determination of, colorimetrically (CHERAMY), ii, 247.

Novocaine, bromo- (FREJKA and VITHA), i, 663, 1416.

Nuclei, mechanism of staining of (FEULGEN and VOIT), i, 1477.

Nucleic acid, determination of, in animal tissues (JAVILLIER and ADAMS), i, 996.

Nucleic acids, alkaloidal salts of (PEISER), i, 1477.

Nucleosides, dissociation constants of, and their relation to nucleic acid (LEVENE and SIMMS), i, 1478.  
synthetic (LEVENE and SOBOTKA), i, 1463.

Nucleotides (IZUMI), i, 174.  
dissociation of constants of, and their relation to nucleic acid (LEVENE and SIMMS), i, 1478.  
plant, in animal tissues (JONES and PERKINS), i, 182.

Nutrient solutions, effect of bacteria on (BLEYER), i, 746.

Nutrition of aquatic animals (KŘÍŽEN-ECKÝ and PODHRADSKÝ), i, 612.

Nux vomica, determination of alkaloids in (SABALITSCHKA and JUNGEMANN), ii, 608.

## O.

Oak, tannins from (FEIST and BESTE-HORN), i, 566.

Oats, nutrients for culture of (JONES and PEMBER), i, 1030.  
culture of, with nitrogen, phosphorus, and potassium (PEMBER and MACLEAN), i, 1121.

Oat bran, insulin-like substance in extracts of (BODEN, NEUKIRCH, and WANKEL), i, 483.

Octadecahydrodecacyclene (DZIEWOŃSKI and SUSZKO), i, 242.

Octaethylcellobiose, acetolysis of (HESS and SALZMANN), i, 1388.

Octahydroacridine, and amino-, and nitro-, and their derivatives (PERKIN and SEDGWICK), i, 63.

*s*-Octahydroanthracene, and its salts and derivatives, and 9-thiol- (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 129.

action of aluminium chloride with (SCHROETER, VAN HULLE, GLUSCHKE, STIER, and MÜLLER), i, 125.

*s*-Octahydroanthracene-9-sulphinic acid, sodium salt (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 130.

1-*s*-Octahydroanthracenylcarbamide (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 130.

1:2:3:4:5:6:7:8-Octahydrocarbazole, constitution of (V. BRAUN and SCHÖRNIG), i, 1449.

Octahydrodecacyclene (DZIEWOŃSKI and SUSZKO), i, 242.

Octahydroindene, preparation and dehydrogenation of (ZELINSKI and BORISSOV), i, 122.

Octahydronaphthalene (ZELINSKI and GAVEDOVSKAJA), i, 123.

*s*-Octahydrophenanthrene, and 1-hydroxy-, and their derivatives (SCHROETER, VAN HULLE, and MÜLLER), i, 131.

*s*-Octahydrophenanthrene-9-carboxylic acid, and its silver salt (SCHROETER, VAN HULLE, and MÜLLER), i, 131.

*s*-Octahydrophenanthrene-9-sulphinic acid, salts and derivatives of (SCHROETER, VAN HULLE, and MÜLLER), i, 131.

Octahydrophenazine, and its derivatives (GODCHOT), i, 436.

Octahydroretene (VESTERBERG and BORGE), i, 252.

$\alpha$ - and  $\beta$ -Octahydrotrianhydrostrophanthidins (JACOBS and COLLINS), i, 567.

*n*-Octaldehyde *p*-nitrophenylhydrazone (STEPHEN), i, 1131.

Octa-oxymethylene diacetate (STAUDINGER and LÜTHY), i, 361.

$\Delta\gamma$ -Octinene (BOURGUEL), i, 770.

*n*-Octoic acid, 3-hydroxybenzaldehyde-2-mercuric ester (WELLCOME FOUNDATION, LTD., HENRY, and SHARP), i, 1154.

*n*-Octoyleglycine, ethyl ester (KARRER, MIYAMICHI, STORM, and WIDMER), i, 594.

Octyl alcohol, substitution of hydroxyl group of, by halogen (MCKENZIE and TUDHOPE), i, 226.

*sec*.-Octyl ether (SENDERENS), i, 113.

Odorants (THOMS), i, 788.

*Oidium lactis*, action of, on tyrosine and its derivatives (KOTAKE, CHIKANO, and ICHIHARA), i, 746.

Oil, behaviour of oleic acid and, on water (CARRIÈRE), ii, 287.

Oils, action of ultra-violet light on (HESS and WEINSTOCK), i, 212.  
surface tensions of aqueous solutions against (HOWARD and SOLLMAN), ii, 109.

acid value of (SOMAZZI), ii, 828.

hydrogenation of (LUSH), ii, 411.

iodine super-number of (MARGOSCHES, FRIEDMANN, SCHEINÖST, and TSCHÖRNER), i, 883.

animal marine, constituents of (ANDRÉ and CANAL), i, 1373.

drying, "oxynes" in (EIBNER and MUNZING), i, 1036.

essential. See Oils, vegetable.

fatty, polymerisation of (MARCUSSEN), i, 356, 1234.

drying of (EIBNER and PALLAUF), i, 777.

iodine value of (MARGOSCHES, FRIEDMANN, and TSCHÖRNER), i, 629.

lecithin in (BOEDTKE), i, 1114.

fluorescent, coating of photographic plates with (HARRISON), ii, 930.

lubricating, heat of wetting of (BACHMANN and BRIEGER), ii, 510.

surface tension of (GRUNMACH and SCHWEIKERT), ii, 31.

marine, catalytic hydrogenation of (RICHARDSON, KNUTH, and MILLIGAN), i, 229.

vegetable (SCHIMMEL & Co.), i, 417.

formation of, in plants (FRANCESCINI, MANFREDI, and ASTENGO), i, 759; (POPOVICI), i, 1123.

extracted from flowers (v. SODEN), i, 1123.

fatty degeneration caused by (v. GRAEVENITZ), i, 195.

antiseptic action of (SCHÖBL), i, 1006.

growth-promoting and calcifying properties of, after exposure to light (STEENBOCK and BLACK), i, 1020.

detection of ethyl phthalate in (THOMS), ii, 1008.

determination of cineole in (CASH and FAWCITT), ii, 75.

determination of phenols in (RETI), ii, 604.

Australian, germicidal values of (PENFOLD and GRANT), i, 614.  
from Calabria, constituents of (LA FACE), i, 564.

Oils, vegetable, Indian, constituents of (SIMONSEN), i, 565, 1164; (RAO), i, 565, 687; (RAO and SIMONSEN), i, 687; (RAO, SUDBOROUGH, and WATSON), i, 1164.

from Travancore (MOUDGILL), i, 565, 823, 945, 1293.

determination of iodine-bromine numbers of (KÖPKE), ii, 246; (WINKLER), ii, 446, 1009.

determination of nitrogen in (TER MEULEN), ii, 599.

Oil emulsions, reversible (SEIFRIZ), ii, 779.

Oil gas, compressed, hydrocarbons from (LEWIS-DALE), i, 769.

Oleanolic acid (VAN DER HAAR), i, 50.

Olefines, isomerisation in (BRUYLANTS), i, 493.

catalytic reduction of (KERN, SHRINER, and ADAMS), i, 625.

action of nitrogen tetroxide on (SCHAARSCHMIDT and HOFMEIER), i, 877.

Oleic acid, preparation, properties, and salts of (LAPWORTH, PEARSON, and MOTTRAM), i, 355.

synthesis of (G. M. and R. ROBINSON), i, 354.

behaviour of oil and, on water (CARRIÈRE), ii, 287.

oxidation of (LAPWORTH and MOTTRAM), i, 1129, 1234.

ammonium salt, elasticity and viscosity of (HATSCHEK), ii, 862.

calcium salt (KLIMONE, v. MOLTINI, and BENEDIK), i, 506.

solubility of (HARRISON), ii, 190.

sodium salt, surface tension of (JOHLIN), ii, 1054.

surface tension of aqueous solutions of (DU NOÛY), ii, 109.

thallium salt (HOLDE and SELIM), i, 504.

3-hydroxybenzaldehyde-2-mercuric ester (WELLCOME FOUNDATION, LTD., HENRY, and SHARP), i, 1154.

Δ<sup>α</sup>-Oleic acid, configuration of (SEMERIA), i, 5.

Oleyl acetate and benzoate (HELPERICH and SCHÄFER), i, 7.

N-Oleylpropylenediamine (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1133.

Olives, Palestine, constituents of, and their oil (MENCHIKOWSKY), i, 1521.

Olive oil, oxidation of organic compounds in (WALKER), i, 990.

Olive resin (REINITZER), i, 146.

Onion, toxins in scales of (WALKER, LINDEGREEN, and BACHMANN), i, 872.

- Ocoporphyrin**, conversion of, into hæmato-porphyrin (FISCHER and LINDNER), i, 992.
- Opianic acid**, condensation of, with phenols (JACOBSON and ADAMS), i, 272.
- Opium alkaloids**, extraction of (KANEWSKAJA), i, 153.  
picrates of (MAPLETHORPE and EVERS), i, 1166.  
detection of (DAVID), ii, 1010.
- Optical activity and molecular dissymmetry** (DARMOIS), ii, 1119.  
and polarity of substituent groups (RULE and SMITH), ii, 1120.  
potential (READ and McMATH), i, 1126.  
constants of matter (DARWIN), ii, 2.  
inversion, Walden's (LEVENE and MIKESKA), i, 5; (SESTER and WARD), i, 31, 1128; (MCKENZIE and TUDHOPE), i, 226; (KENTON, PHILLIPS, and TURLEY), i, 507; (TERRY and EICHELBERGER), i, 631.  
phenomena, quantum theory of (SLATER), ii, 478.  
rotatory power, and size of atoms (BRAUNS), ii, 633.  
screening constants (MENZIES), ii, 831.  
superposition, studies in (PATTERSON and BUCHANAN), i, 115.
- Optically active compounds**, chemical constitution and rotatory power of (RUPE and KOPP), i, 274; (RUPE and VONAESCH), i, 499; (RUPE and RINDEKNECHT), i, 533.
- Orange II**, derivatives of, with sulphites (BUCHERER and STIOHEL), i, 1338.
- Oranges**, insulin-like substances in (FISHER and MCKINLEY), i, 1016.  
protein from (SMITH), i, 619.  
navel, glucosides of (HALL), i, 760.  
Valencia, constituents of the juice of (HALL and WILSON), i, 1521.
- Orange juice**, antiscorbutic value of (LIOTTA), i, 1365.  
effects of lemon juice and of, on calcification (KORENCHESKY and CARR), i, 211.
- Orchids**, loroglossin from (DELAUNEY), i, 487.
- Orcinol dimethyl ether**, 2:6-dibromo- (WAGENHOFER), i, 550.
- Orcinol**, 2:4-dibromo-, and its salts (WAGENHOFER), i, 550.
- Ordosite** (LACROIX), ii, 429.
- Organs**, extraction of alkaloids from (FABRE), i, 719.  
animal, method of testing therapeutic powders from (JAVILLIER, ALLAIRE, and GROC), ii, 1012.
- Organic compounds**, structure of, from Röntgen ray crystal analysis (MARK), i, 1.  
formation of, from inorganic compounds in light (BAUDISCH), ii, 1082.  
ultra-red spectrochemistry of (BO-NINO), ii, 1032.  
ultra-violet absorption spectra of (MARCHELEWSKI and MOROZ), ii, 353.  
rotatory dispersion of (LOWRY and RICHARDS), ii, 265; (LOWRY and CUTTER), ii, 356; (RICHARDS and LOWRY), ii, 632, 934; (CUTTER, BURGESS, and LOWRY), ii, 743.  
fluorescence of (MOIR), ii, 261.  
electron displacement in (LUCAS and JAMESON), i, 2; (LUCAS, SIMPSON, and CARTER), i, 769; (LUCAS and MOYSE), i, 770.  
thermochemistry of (PARKS and KELLEY), ii, 949.  
heats of combustion of (KHARASCH and SHER), ii, 636.  
thermal data of (PARKS), ii, 491.  
repulsive action of various groups in (BÖESEKEN), ii, 1031.  
lability of halogen atoms in (MAC-BETH and TRAILL), i, 628, 782.  
influence of hydrogen and halogens on the properties of (VAN ARKEL and DE BOER), ii, 758.  
stability of (BOLIN), ii, 411.  
reactivity of atoms and groups in (NORRIS and ASHDOWN), i, 626.  
catalytic hydrogenation of, with platinum oxide (PIERCE and ADAMS), i, 824; (HECKEL and ADAMS), i, 909; (CAROTHERS and ADAMS), ii, 693.  
liberation of hydrogen from (DICKSON), i, 1038.  
autoxidation of (STAUDINGER), i, 897, 898.  
adsorption of, by charcoal (RICHARDSON and ROBERTSON), ii, 383.  
decomposition of (SCHÖNBERG), i, 557.  
action of chlorine monoxide on (GOLDSCHMIDT and SCHÜSSLER), i, 497.  
acidic, colour changes in salt formation by (KEHRMANN), i, 435.  
aliphatic, spreading of, on surface of water (CARY and RIDEAL), ii, 1046, 1047, 1048.  
complex, reactivity of (REIHLEN, ILLEG, and WITTIG), ii, 232.  
isomeric, solubility of (ANDREWS; KOHMAN), ii, 1052; (KOHMAN and ANDREWS), ii, 1053.  
long-chain, Röntgen ray spectra of (SHEARER), ii, 938.

- Organic compounds**, proof of identity of (MURMANN), ii, 719.  
 elementary analysis of (ŠVĚDA and PROČKE), ii, 719.  
 determination of arsenic in (NEWBERRY), ii, 901.  
 determination of carbon in (WHITE and HOLBEN), ii, 240; (DESGREZ and VIVARIO; SIMON), ii, 436; (WILDE and LOCHTE), ii, 600.  
 determination of carbon, hydrogen, and nitrogen in (HESLINGA), ii, 65.  
 determination of halogens in (BUSCH), ii, 823.  
 determination of nitrogen in (TER MEULEN), ii, 86.  
 determination of oxygen in (TER MEULEN), ii, 156.  
 separation of, by means of adsorption (FODOR and ROSENBERG), ii, 1060.
- Organic radicals**. See under Radicals.
- Organic reactions**, course of (MÜLLER), ii, 414.
- Organic syntheses**, physico-chemical study of (MATIGNON), ii, 1068.
- Organism**, animal, synthesis of amino-acids in (MCGINTY, LEWIS, and MARVEL), i, 100.  
 electrolytes in the (KRAUS, ZONDEK, ARNOLDI, and WOLLHEIM), i, 198.  
 metabolism of mineral salts in the (SASAKI), i, 331.  
 human, water-salt content of, in relation to acid-base balance (OEHME and PAAL), i, 326.
- Organo-metallic compounds**, fluorides of (KRAUSE and v. GROSSE), i, 378.
- Ornithine**, behaviour of, in the liver (FELIX and ROTHLE), i, 859.
- Orobanches**, blackening of, during drying (BRIDEL and CHARAUX), i, 488.
- p-Oresellinic acid** (WAGENHOFER), i, 550.
- Orthoboric acid**. See under Boron.
- Orthocarbonic acid**, ethyl ester, hydrolysis of (SKRABAL and BALTAD-SCHIEVA), ii, 139.
- Osmium chloride**, compounds of carbon monoxide with (MANCHOT and KÖNIG), ii, 232.  
 tetroxide (v. WARTENBERG), ii, 231.  
 boiling point of (v. WARTENBERG), ii, 276.  
 compounds of (KRAUSS and WILKEN), ii, 894.
- Osmium organic compounds**, complex base of (TSCHUGAEV and FRITZMANN), i, 1895.
- Osmosis** in various gels (YUMIKURA), i, 735.  
 See also Electro-endosmosis.
- Osmotic equilibria** of systems with a semi-permeable membrane (SCHREINEMAKERS), ii, 975.
- Osmotic pressure**, determination of, by the solubility method (APPLEBERRY and DAVIES), ii, 964.  
 relation of, to adsorption (PÓLÁNYI), ii, 290.  
 of colloids (BJERRUM), ii, 111.  
 electrolytes of high molecular weight (HAMMARSTEN), ii, 195.
- Ovariectomy**, salts in blood after (BLANCHETIÈRE), i, 1207.
- Ovary**, preparation of hormone from (DICKENS, DODDS, and WRIGHT), i, 1513.  
 lipoids of the (YAMAUCHI; LANG), i, 457.
- Over-potential**, theory of (HEYROVSKÝ), ii, 675.
- Overvoltage** (KNOBEL), ii, 211, 212; (BIRCHER, HARKINS, and DIETRICHSON), ii, 211; (NEWBERRY), ii, 405; (SMITS), ii, 547.  
 influence of colloids on (MARIE and LEJEUNE), ii, 115.  
 effect of hydrogen-ion concentration on (HERASYMENKO), ii, 675.  
 effect of surface condition on (KNOBEL), ii, 547.  
 cathodic, and passivity (LIEBREICH and WIEDERHOLT), ii, 44.  
 hydrogen (HARKINS and ADAMS), ii, 301.  
 on alloys (FISCHER), ii, 44.  
 at arsenic cathodes (GRUBE), ii, 43.  
 of lead cathodes (GLASSTONE), ii, 43, 301.  
 of mercury cathodes (GLASSTONE), ii, 133.
- Ox**, constituents of extracts of testicles of (MÜLLER), i, 854.
- Oxacyanines** (KÖNIG and MEIER), i, 705.
- p-Oxadiazophospholes** (AUTENRIETH and BÖLLI), i, 1468.
- Oxalacetic acid**, fermentation of (NEUBERG and GORE), i, 337.  
 behaviour of, with animal organs (MAYER), i, 736.
- Oxalenediuramidoxime**, use in, in detection and determination of nickel (FEIGL and CHRISTIANI-KRONWALD), ii, 330.
- Oxalic acid**, dissociation constants of (BRITTON), ii, 977.  
 adsorption of, by oxides (KOZAKEVITSCH), ii, 855.  
 photochemical decomposition of, in uranyl sulphate solution (ANDERSON and ROBINSON), ii, 415.  
 esterification of, with phenols (FEIGL and KOBILIANSKY), i, 1235.

- Oxalic acid**, reaction of ethers with (WASER and SANDER), i, 536.  
 oxidation of, by hydrogen peroxide (HATCHER and HOLDEN), ii, 684.  
 catalysis of the reaction of permanganates with (RIDLEY), ii, 689.  
 additive compounds of sodium ethoxide and esters of (ADICKES), i, 1378.  
 decomposition of, by plants (PALADIN and LOVTSCHINOVSKAJA), i, 1222.
- Oxalic acid**, aniline trihydrogen salt (RAMBECH), i, 385.  
 calcium salt, abnormal crystal forms of (BARDACH), i, 1114.  
 hydration of (AUMÉRAS), ii, 895.  
 action of sulphuric acid on (CARRIÈRE and VILON), ii, 206.  
 precipitation of, in presence of ammonium citrate (JAKÓB), ii, 69.  
 conversion of, into calcium carbonate in tissues (LOEPER, SCHULMANN, and TOUNET), i, 1497.  
 magnesium salt, occlusion of, by calcium oxalate (LEMARCHAND), ii, 385.  
 molybdenum salts (WARDLAW and PARKER), i, 893.  
 potassium salt, electrolysis of solutions of (JEFFERY), ii, 304.  
 effect of light on the reactions of bromine and iodine with (BERTHOUD and BELLENOT), ii, 141.  
 uranyl salt (COLANI), i, 1285.  
 urea salts, determination of, in fertilisers (SABALITSCHKA and KUBISON), i, 347.
- Oxalic acid**, dinaphthyl and ditolyl esters (FEIGL and KOBILIANSKY), i, 1236.  
 ethyl and methyl esters, equilibria of, with phenols (KREMANN, ZECHNER, and DRAZIL), ii, 650.
- Oxalic acid**, detection of, in tissues (KLEIN and WERNER), i, 871.  
 separation of, in analysis of Group III metals (KESCHAN), ii, 1008.
- Oxalpropionic acid**, ethyl ester, thermal decomposition of (WATSON), ii, 556.
- Oxalsuccinic acid**, ethyl ester, thermal decomposition of (WATSON), ii, 556.
- Oxalyl-4,4'-diaminodiphenylmethane** (BUTLER and ADAMS), i, 1458.
- Oxalylidibenzyl ketone**, azines from (CHAKRAVARTI), i, 1330.
- Oxalylidimalonic acid**, ethyl ester (PANKOFF), i, 358.
- $\alpha$ -Oxalyl- $\gamma$ -phenyl- $\Delta\beta$ -butenoic acid**, ethyl ester (v. AUWERS and MÖLLER), i, 494.
- $\alpha$ -Oxalyl- $\gamma$ -phenylbutyric acid**, ethyl ester (v. AUWERS and MÖLLER), i, 403.
- Oxazole-yellow** (KÖNIG and MEIER), i, 705.
- Oxazoline**, 2-hydroxy-, benzoate (FROMM, BARRENSCHEEN, FRIEDER, PIRK, and KAPPELLER), i, 595.
- Oxaserine**, derivatives of (POLONOVSKI and POLONOVSKI), i, 696.
- Oxidation** (ARMSTRONG), i, 1009.  
 mechanism of (WARBURG), i, 374; (WIELAND, HAUSSMANN, and LÖVENSKIÖLD), ii, 1171.  
 in light (ECKERT), i, 413.  
 in oils (WALKER), i, 990.  
 with ozone (BRINER, v. TSCHARNER, and PAILLARD), i, 1069.  
 in sea water (HARVEY), ii, 1171.  
 anomalous protection against (SHEPPARD), ii, 1084.  
 negative catalysis of (DHAR), ii, 690.  
 equilibria in stages of (GRUBE and STAESCHE), ii, 893.  
 biological (MARK), i, 832; (NEILL and AVERY), i, 340.  
 as a function of temperature (CROZIER), i, 102.  
 liberation of energy in (AUBEL and WURMSER), i, 480.  
 influence of oxygen tension on (HAMBURGER and v. SZENT-GYÖRGYI), i, 709.  
 induced (DEY and DHAR), ii, 692; (JORISSEN and VAN DEN POL), ii, 879.
- Oxidation-reduction** (COHEN, GIBBS, and CLARK), i, 25; (CLARK), ii, 673; (CADDY and TAFF), ii, 1073; (CLARK, COHEN, and GIBBS), ii, 1164.  
 new system of (HAERN and PÜTZ), i, 858.  
 by blood pigments (LIPSCHITZ), ii, 1070.
- Oxides**, physico-chemical analysis of sols of (LOTTERMOSER, FRIEDRICH, HÜBNER, and SZABÓ), ii, 521.  
 effect of high temperatures on (RUFF), ii, 579.  
 acidic and basic, heating curves for mixtures of (DE CARLI), ii, 670.  
 amphoteric hydrated, molecular size of, in alkaline solution (JANDER and SCHULZ), ii, 528.  
 See also Metallic oxides.
- $\alpha$ -Oxides**, thermochemistry of (SWIENTOSLAWSKI), ii, 364.
- cis-Oxidoethylenedicarboxylic acid**, conversion of, into *trans*-tartaric acid (BÖSEKEN), i, 1237.
- Oxidoethylene- $\alpha\beta$ -dicarboxylic acids**, and their salts (KUHN and EBEL), i, 780.

- Oxidoethylene- $\alpha$ -dicarboxylic acids**, action of yeast on (KUHN and EBEL), i, 1237.
- Oxido-ketones**, preparation of (WEITZ), i, 408.
- Oximes**, thermochemistry of (DORABIALSKA), ii, 208, 1140.  
isomerism of (BRADY and MEHTA), i, 43; (BRADY and KLEIN), i, 674; (BRADY and BISHOP), i, 930.  
tautomerism of (GRIFFITHS and INGOLD), i, 1190.  
catalytic reduction of (ROSENMUND and JORDAN), i, 245; (GULEVITSCH), i, 653.  
electrolytic reduction of (ISHIBASHI), i, 1382, 1431.  
reduction of, with aluminium amalgam (MAZOUREVITCH), i, 1247.  
sodium salts, distillation of, under reduced pressure (KOMATSU and HIRAIKAZUMI), i, 934.
- $\gamma$ -Oximinovaleic acid**, electrolytic reduction of (ISHIBASHI), i, 1382.
- Oxindigo**. See 3:3'-Diketod- $\Delta^{2,2}$ -dicoumaran.
- Oxindole**, condensation reactions of (MACBETH and CRAIK), i, 1315.
- Oxindole-3-aldehyde**, 5:7-diodo-, and its derivatives (KALB and BERER), i, 161.
- Oxonic acid**, cuprammonium salt (PIAUX), i, 593.
- Oxonitin** (MAJIMA and SUGINOME), i, 1447.
- Oxonium perbromides** (KEHRMANN and FALKE), i, 351.
- Oxonium compounds**, heats of formation of (TSCHHELINOV), ii, 480.
- Oxyberberine**, synthesis of (PERKIN, KAY, and ROBINSON), i, 695.
- Oxycellulose** (HESS), i, 519.  
nitrates (ATSUKI), i, 120.
- Oxycelluloses** (BIRTWELL, CLIBBENS, and RIDGE), i, 234.
- Oxychelidonine** (GADAMER and THIESSEN), i, 237.
- Oxycodoneones**, preparation of (MEROK, CHERMISCH FABRIK), i, 1315.
- Oxycyanogen** (BIRCKENBACH and KELLERMANN), ii, 569.
- Oxydase**, xanthine (THURLOW), i, 743.
- Oxyseretholemethine, N-oxide**, and its derivatives (POLONOVSKI and POLONOVSKI), i, 959.
- Oxyseriethine** (POLONOVSKI and POLONOVSKI), i, 960.
- Oxyserine**, and its derivatives (POLONOVSKI and POLONOVSKI), i, 293.
- Oxyserole-ethine** (POLONOVSKI and POLONOVSKI), i, 960.
- Oxyserole picrate** (POLONOVSKI and POLONOVSKI), i, 960.
- Oxygen**, spectrum of (BUNGARTZ), ii, 609.  
arc spectrum of (LOCKROW), ii, 1099.  
K-absorption spectrum of (ROBINSON), ii, 614.  
ultra-violet absorption spectrum of (SCHMIDT), ii, 336; (FUCHTBAUER and HOLM), ii, 626.  
band spectrum of (HOLLAND), ii, 1113.  
ionised, line spectrum of (CROZE), ii, 166, 250.  
dry, effect of ultra-violet light on (BAKER and CARLTON), ii, 1180.  
atom, co-ordination number of (PICCARD), ii, 15.  
liquid, dielectric constant of (BREIT and ONNES), ii, 631.  
molecular heat of (SCHREINER), ii, 97.  
heat of dissociation of (EUCKEN), ii, 207; (WULF), ii, 848.  
temperature-entropy diagram for (RODEBUSH, ANDREWS, and TAYLOR), ii, 492.  
isotherms of (HOLBORN and OTTO), ii, 851.  
density of (BAXTER and STARK-WEATHER), ii, 138.  
absorption of, in gas analysis (FIESER), ii, 238.  
absorption of, in water (WHITMAN and DAVIS; BECKER), ii, 106.  
sorption of, by activated graphite (BANGHAM and STAFFORD), ii, 656.  
solubility of, in silver (FARRAVANO and MALQUORI), i, 769.  
velocity of reaction of, with inorganic salt solutions (REINDERS and VLES), ii, 567.  
activation of (JORISSEN and VAN DEN POL), ii, 52.  
catalysis of the formation of water from hydrogen and (HOFMANN and DOLDE), ii, 139.  
combination of hydrogen and, in presence of silver and gold (CHAPMAN, RAMSBOTTOM, and TROTMAN), ii, 310.  
oxidation of metallic salts with (REINDERS and VLES), ii, 308.  
exchange of, in blood (MURRAY and MORGAN), i, 1481.  
respiration of, in muscular exercise (FURUSAWA), i, 993.  
supply and utilisation of, during muscular exercise (LYTHGOE and PEREIRA; PEREIRA), i, 1341.  
free, origin of, in air (TAMMANN), ii, 100.

**Oxygen**, univalent (GOLDSCHMIDT, VOGT, and BREDIG), i, 1434.

**Oxygen detection and determination**:—  
detection of (SCHMALFUSS), ii, 238;  
(SCHMALFUSS and WERNER), ii, 1198.  
determination of, colorimetrically  
(EFIMOV), i, 481.

dissolved, determination of (FRIEND),  
ii, 326.

determination of, in aqueous solution,  
in presence of nitrous acid  
(ALSTERBERG), ii, 1198.

apparatus for determination of, in air  
(PLANTEFOL), ii, 902.

determination of, in iron (ROONEY),  
ii, 327.

determination of, in organic compounds  
(TER MEULEN), ii, 157.

**Oxyhamin**, and its salts (HAMSİK), i, 845.

**Oxyhæmocyanin**, determination of,  
colorimetrically (PANTIN and HOGGEN),  
i, 1481.

**Oxyhæmoglobin**, crystalline, preparation  
of (THIVOLLE and ROCHE), i, 1111.  
dissociation of, in tissues (CAMPBELL),  
i, 1481.

**Oxylsine**, and its derivatives (SCHRY-  
VER, BUSTON, and MUKHERJEE), i,  
794.

**Oxyne** (EIBNER and MUNZING), i,  
1036; (EIBNER and RIED), i, 1377.

**Oxyisoptoberberine** (HAWORTH, PER-  
KIN, and PINK), i, 1168.

**Oxyanguinarine** (GADAMER and THIES-  
SEN), i, 287.

**3-Oxythionaphthen**, condensation re-  
actions of (MACBETH and CRAIK), i,  
1315.

**3-Oxy(1)thionaphthen glucoside** (*thio-  
indican*) (CRAIK and MACBETH), i,  
1296.

**Oysters**, shell-growth in (ORTON), i,  
1002.

**Ozone** (SCHWAB), ii, 149.

formation of, in incandescent capil-  
laries (RIESENFELD), ii, 989.

electrolytic preparation of (MAL-  
QUORI), ii, 62.

production of (WARBURG and RUMP;  
WARBURG), ii, 706.

altitude of, in the atmosphere  
(CABANNES and DUFAY), ii, 998.

in flames (v. WARTENBURG), ii, 147;  
(RIESENFELD), ii, 148.

absorption of radiation by, in the  
atmosphere (FABRY), ii, 627.

photochemical decomposition of, in  
presence of chlorine (ALLMAND),  
ii, 1079.

photochemical and thermal decom-  
position of (GRIFFITH and  
McKEOWN), ii, 1080.

**Ozone**, thermal decomposition of  
(GRIFFITH and McKEOWN), ii, 1168.  
destruction of, by various reagents  
(SMITH), ii, 890.

oxidation with (BRINER, EGGER, and  
PAILLARD), i, 274; (BRINER, v.  
TSCHARNER, and PAILLARD), i,  
1069.

action of, on inorganic colloids (RIES-  
ENFELD and HAASE), ii, 988.

determination and solubility of  
(WARTENBERG and PODJASKI), ii,  
1198.

**Ozonides**, constitution of (STAUDINGER),  
i, 897.

**Ozoniser**, laboratory (SMITH), ii, 896.

## P.

**Palladium**, and its amalgam in British  
Guiana (HARRISON; HARRISON and  
BOURNE), ii, 593.

arc spectrum of (BEALS), ii, 1015.

Röntgen ray spectrum of (ALLISON),  
ii, 724.

polarisation of, in alkaline solution  
(JIRSA), ii, 45.

physical state and catalytic activity  
of (SMITH), ii, 1072.

adsorption of hydrogen by (LAMBERT  
and GATES), ii, 785.

**Palladium alloys** with copper and with  
gold, structure of (HOLGERSSON and  
SEDSTRÖM), ii, 20.

with silver, adsorption of hydrogen  
by (KRUGER and SACKLOVSKY), ii,  
1125.

**Palladium oxide**, catalytic reduction with  
(KERN, SHRINER, and ADAMS), i,  
625.

selenide (MOSER and ATYNSKI), ii,  
584.

**Palladium organic compounds**:—

**Palladium dimethylglyoxime** (COOP-  
ER), ii, 827.

**Palladium determination and separ-  
ation**:—

determination of (ZSCHIEGNER), ii,  
443.

separation of platinum and (KRAUSS  
and DENEKE), ii, 1005.

**Palladium black**, structure of (OSAWA),  
ii, 747.

**Palm kernel oil** (ARMSTRONG, ALLAN,  
and MOORE), i, 504.

**Palm tree**, American, fats from (ANDEE  
and GUICHARD), i, 1124.

**Palmatrubine**, and its salts (FEIST and  
DSCHU), i, 830.

**Palmitaldehyde p-nitrophenylhydrazone**  
(STEPHEN), i, 1131.

- Palmitic acid**, latent and specific heats of (PARKS and KELLEY), ii, 949.  
 latent heat of fusion of (STRATTON and PARTINGTON), ii, 25.  
 metallic salts (KLIMONE, v. MOLTINI, and BENEDIK), i, 506.  
 calcium salt, solubility of (HARRISON), ii, 190.  
 sodium salt, equilibria of sodium chloride, water, and (MCBAIN and LANGDON), ii, 537.  
 emulsifying power of (YAJNIK and ILAHI), ii, 968.  
 thallium salt (HOLDE and SELIM), i, 504.
- Palmitylacetic acid**, ethylester (LEVENE and HALLER), i, 890.
- Palmitylacetoacetic acid**, ethyl ester (LEVENE and HALLER), i, 890.
- N-Palmitylpropylenediamine** (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1133.
- $\alpha$ -Paltraubyl alcohol** (VESTERBERG), i, 1062.
- Pancreas**, effect of ingestion of food on activity of (SEVRINGHAUS and SMITH), i, 727.  
 effect of removal of, on excretion (BIERRY and RATHERY), i, 856.  
 relation between carbohydrate metabolism of muscle and (FOSTER), i, 1495.  
 urinary diastase in diseases of (HANSEN), i, 856.  
 enzymes of (WALDSCHMIDT-LEITZ and HARTENECK), i, 1860.  
 hæmoleucolysin from (BELFANTI), i, 326.  
 nucleic acid from (JOPPE), i, 182.
- Pancreatic juice**, activation of (LISBONNE), i, 615.  
 by enterokinase (SETH), i, 202.
- Papsin**, lipase from (SANDBERG and BRAND), i, 1009.  
 proteolytic activity of (FABRE and FROSSARD), i, 863.
- Papaverine nitrite**, preparation of (BOEHRINGER SOHN), i, 427.
- Paracetaldehyde**, action of, on proteins and lipins (COOPER), i, 91.
- Paracetaldehyde**, dibromo- (STEPANOV, PREOBRASCHENSKI, and SCHTSCHUKINA), i, 1240.
- Parachloralose** (CHEVALIER and CHERBULIEZ), i, 467.
- Parachor** and chemical constitution (SUGDEN, REED, and WILKINS), ii, 936;  
 (SUGDEN and WHITTAKER), ii, 937.
- Paraffin**, photographic action of *H*-particles from (BLAU), ii, 1111.  
 utilisation of, by micro-organisms (TAUSSON), i, 479.
- Paraffins**, cracking of (WILLIAMS-GARDNER), i, 1229.  
 ignition of mixtures of air and (WHEELER), ii, 408.
- cycloParaffins**, structure of (WIGHTMAN), i, 894.
- Paraffin wax**, melting point of (BJERREGAARD), i, 769.  
 decomposition of (WATERMAN and PERQUIN), ii, 1125.
- Paraldehyde**. See Paracetaldehyde.
- Paralinoleic acid** (HASHIMOTO), i, 1234.
- Paramagnetism**, theories of (CABRERA), ii, 173.  
 and the electron configuration of atoms (JACKSON), ii, 732.  
 of salts (COTTON-FEYTS), ii, 945.  
 of substances with an odd number of electrons (TAYLOR and LEWIS), ii, 945.
- Parathyroids**, extracts of, and their activity (HJORT, ROBISON, and TENDICK; COLLIP), i, 1364.  
 hormone from (COLLIP; COLLIP, CLARK, and SCOTT), i, 754; (COLLIP and CLARK), i, 1017.
- Particles**, electric charge on (SEXL; DERIEUX), ii, 832.  
 recorder for measuring distribution of, in sedimentation (LAMBERT and WIGHTMAN), ii, 1194.  
 charged, action of, in liquids (BURTON and CURRIE), ii, 531.
- $\alpha$ -Particles**, model for (HARGREAVES), ii, 835.  
 enumeration of (APPLETON, EMELEUS, and BARNETT), ii, 10.  
 disintegration of atoms by (KIRSCH), ii, 923.  
 capture and loss of electrons by (HENDERSON), ii, 922.  
 scattering of, by elements (RUTHERFORD and CHADWICK), ii, 1109.  
 ionisation of gases by (GURNAY), ii, 256.  
 stopping power of gases for (FOWLER; KRONIG), ii, 834.  
 distinction between *H*-particles and (KARA-MICHAILOVA), ii, 621.
- H*-Particles**, retrograde (KIRSCH), ii, 621.  
 distinction between  $\alpha$ -particles and (KARA-MICHAILOVA), ii, 621.
- Paschen-Back effect** (RUNGE), ii, 341.
- Passivity** (BECKER and HILBERG), ii, 405; (RUSSELL; GERDING and KARSEN), ii, 406.  
 and anodic behaviour of metals (SBOGRI), ii, 550.  
 and cathodic overvoltage (LIEBREICH and WIEDERHOLT), ii, 44.  
 of metals, influence of anions on (ROTHMUND, EISENKOLB, and STEINHERZ), ii, 181.

- Pearlite, structure of ferrite and cementite in (BELAEW), ii, 768.
- Pechmann colouring matters, constitution and formation of (BOGERT and RITTER), i, 255.
- Pectic substances in plants (O'DWYER), i, 1225; (NORRIS and SCHRYVER), i, 1226.
- Pectin, coagulation of (KOPACZEWSKI), i, 872.  
hydrolysis of (SMOLEWSKI), i, 216.
- Pectinogen (NORRIS and SCHRYVER), i, 1226.
- Pelargonidin chloride, and its 3:3'-dimethyl ether (PRATT and ROBINSON), i, 826.
- Pellagra, prevention and causation of (GOLDBERGER and TANNER), i, 1517.
- Peneus setiferus* (shrimp), amino-acids in muscle of (JONES, MOELLER, and GERSDORFF), i, 1348.
- Pentachlororuthenious acid. See under Ruthenium.
- Pentadecaldehyde, derivatives of (LANDA), i, 1038.
- Pentadecylidenehydrazine benzoyl and *m*-nitrobenzoyl derivatives (LANDA), i, 1039.
- Pentaerythritol tetranitrate, crystalline structure of (KNAGGS), ii, 748.
- 1:3:3':4':5'-Pentamethoxybenzoylcoumaranone, 2:4-dibromo- (DEAN and NIERENSTEIN), i, 953.
- 1:3:3':4':5'-Pentamethoxybenzylcoumaranone (DEAN and NIERENSTEIN), i, 952.
- 1:3:3':4':5'-Pentamethoxybenzylidene-coumaranone, and 2:4-dibromo-, dibromide (DEAN and NIERENSTEIN), i, 952.
- 2:4:6:3':4'-Pentamethoxydiphenylpropane, isomerides of (DRUMM, O'REILLY, and RYAN), i, 1268.
- 2:4:6:3':4'-Pentamethoxy- $\alpha\alpha$ -diphenyl- $\Delta\alpha$ -propene, and its dibromide (DRUMM, O'REILLY, and RYAN), i, 1268.
- 1:3:3':4':5'-Pentamethoxyflavanone (DEAN and NIERENSTEIN), i, 952.
- 3:5:7:2':4'-Pentamethoxyflavylium salts (PRATT and ROBINSON), i, 826.
- 2:2:3:6:8-Pentamethylbenzopyran (CLAISEN), i, 278.
- $\alpha\alpha$ -Pentamethylenediminodiphenyl-diacetic acid, nickel salt (SCHLESINGER), i, 1250.
- Pentamethylenedithiocarbamic acid, salts of (WHITBY and MATHESON), i, 644.
- Pentamethylguanidinium salts (LECHER, GRAF, and GRÄDINGER), i, 1393.
- Pentamethylsulfur-blue (BINZ and RÄTH), i, 446.
- Pentane,  $\beta\gamma$ -dichloro- (BOURGUEL), i, 770.
- cis*cyclopentane, 1:3-diamino-, and its derivatives (DIELS, BLOM, and KOLL), i, 977.
- cyclo*Pentane-1-carboxylic acid, 1-hydroxy-, compound of boric acid and (HERMANS), i, 501.
- cyclo*Pentane-1'-carboxylylanilino*cyclo*-pentane-1-carboxylic acid, 1:1'-hydroxy-, lactone (PLANT and FACER), i, 1271.
- Pentane-8 $\delta$ -diol, compound of boric acid and (HERMANS), i, 501.
- cis*cyclopentanediol, potassium borates of (HERMANS), i, 501.
- Pentanones, and their phenylosazones (SCHMIDT and ASCHERL), i, 364.
- Penta-oxymethylene diacetate (STAUDINGER and LÜTHY), i, 361.
- $\Delta\beta$ -Pentene, action of hydrogen bromide on (LUCAS and MOYSE), i, 770.
- $\Delta\beta$ -Pentene,  $\gamma$ -chloro- (BOURGUEL), i, 364.
- $\Delta\delta$ -Pentenol (HELPERICH and SCHÄFER), i, 7.
- $\Delta\beta$ -Penten-5-ol (CLAISEN), i, 278.
- o*-Pentenyl-*p*-cresol (CLAISEN), i, 278.
- o*-Pentenylxylenol (CLAISEN), i, 278.
- $\Delta\alpha$ -Pentinene- $\gamma\delta$ -diol,  $\epsilon$ -chloro- (LESPIEAU), i, 1376.
- $\Delta\alpha$ -Pentinene- $\gamma$ -ol,  $\delta\epsilon$ -dichloro-, derivatives of (LESPIEAU), i, 1376.
- Pentosans, determination of (KLINGSTEDT), ii, 720.  
determination of, in wood (GIERISCH), i, 1122.
- Pentoses in plants (ENGLIS and HALE), i, 618.  
new reaction for (BERTRAND; DENIGES), i, 790.  
detection of (THOMAS), ii, 604.  
detection of, in plant glucosides (THOMAS and IMAS), ii, 1209.
- cyclo*Pentylideneazine, action of hydrochloric acid on (PERKIN and PLANT), i, 842.
- Peppermint oil, influence of hydrogen-ion concentration in soil on composition of (H. and (MME.) H. DEEL), i, 622.
- Esthonian, constituents of (WEIDEPASS), i, 687.
- Pepsin, ionic nature of (NORTHROP), i, 864.  
effect of reagents on activity of (HUGOUNENQ and LOISELEUR), i, 1198.  
effect of temperature and reaction on the destruction and activity of (EGE), i, 743.

- Pepsin**, action of hydrochloric acid and, on proteins (VAN URK), i, 1507.  
 study of the action of, by peptisation of gold hydrosols (UHLÉNBRUCK), i, 742.  
 action of, on insulin (EPSTEIN), i, 1513.  
 hydrolytic and synthetic properties of (BORSOOK and WASTENEYS), i, 472.  
 synthesis of proteins by means of (WASTENEYS and BORSOOK), i, 102, 864.  
 determination of, in gastric juice (ROSTOCK), i, 1009; (BOAS, HIRSCH-MAMROTH, and RINDFLEISCH), i, 1213.
- Peptase** in leaves (BLAGOVESCHENSKI and BIELOZERSKI), i, 1009.
- Peptidase**, balance of, in man and animals (PFEIFFER and STANDENATH), i, 1861.
- Peptides**, hydrolysis of (LEVENE and SIMMS), i, 473.  
 transformations of (BERGMANN, MISKELEY, and KANN), i, 1134.  
 action of alkalis on (LEVENE and PFALTZ), i, 1474.
- Peptisation**, theory of (SEN), ii, 666.
- Peptones**, hydrolysis of, with hydrochloric acid (YAITSOHNIKOV), i, 320.
- Per-acids**, formation of (FICHTER and STOCKER), i, 239.
- Perbenzoic acid**, preparation of (HIBBERT and BURT), i, 1147.
- Perborates**. See under Boron.
- Perchlorates and Perchloric acid**. See under Chlorine.
- Perfumes** in foods (BYLSMA), i, 1356.
- Perhydridase** of milk (SEARSKY and MICHLIN), i, 472.
- Perhydroanthracene** (SCHROETER, VAN HULLE, GLUSCHKE, STIER, and MÜLLER), i, 125.
- Periodic system** (PALMAER), ii, 90.  
 theory of (SOMMERFELD), ii, 177.  
 in relation to isotopes (SCHTSCHUKAREV), ii, 462.  
 of elements (ODDO), ii, 623.
- Periodicity** in electrochemical reactions (HEDGES and MYERS), ii, 680.  
 and unsaturated cyclic compounds (PETRENKO-KRITSCHENKO), ii, 1122.
- "Permalloy"** (DELORAINE), ii, 639.
- "Permalloys,"** effect of tension on magnetisation and hysteresis of (BUCKLEY and MCKEEHAN), ii, 945.
- Permanganates**. See under Manganese.
- Permanganic acid**. See under Manganese.
- Permeability** (GYÖRGY), i, 322.  
 of cells (BROOKS), i, 1004; (CHODAT), ii, 521.
- Permeability of membranes** (BANCROFT and GURCHOT), ii, 110.  
 for electrolytes (MICHAELIS), ii, 1150; (FUJITA), ii, 1151.  
 of stereoisomerides (OKAGAWA), i, 711.  
 reversible (GANS), ii, 173.
- Permutoid structure** (KAUTSKY and HERZBERG), ii, 941.
- Pernitric acid**. See under Nitrogen.
- Pernitroso compounds**, action of potassium cyanide on (PASSERINI), i, 1290.
- Perowskite**, crystal structure of (LEVI and NATTA), ii, 1036.
- Peroxides**, fusion with, by the explosion method (MUEHLBERG), ii, 899.  
 organic, syntheses with (GELISSEN and HERMANS), i, 379, 545, 663, 664.  
 analogies between diazo compounds and (GELISSEN and HERMANS), i, 813.  
 determination of (RUPP and SIEBLER), ii, 432.
- Peroxydases**, influence of neutral salts on (SMIRNOV), i, 486.  
 hydrolysis of starch by (BIEDERMANN and JERNAKOFF), i, 11.  
 in dried seeds (COUPIN), i, 615.
- Per-salts**, determination of (RUPP and SIEBLER), ii, 432.
- Perylene**, and its derivatives (ZINKE, FUNKE, and PONGRATZ), i, 819; (ZINKE, FUNKE, MATSCHES, WOLFBÄUER, and LÖRBER), i, 1436.  
 preparation of (COMPAGNIE NATIONALE DE MATIÈRES COLORANTES ET DE PRODUITS CHIMIQUES), i, 21.  
 derivatives of (ZINKE, LINNER, and WOLFBÄUER), i, 383; (ZINKE, PONGRATZ, and FUNKE), i, 384.
- Perylene**, 1:12-dihydroxy- (ZINKE and HANSELMAYER), i, 564.
- Perylene colouring matters** (BADISCHE ANILIN- & SODA-FABRIK), i, 1290.
- 1:12-Perylenequinone** (ZINKE and HANSELMAYER), i, 564.
- Perylenetetracarboxylic acid**, and its derivatives (KALLE & Co.), i, 406.  
 vat dyes from derivatives of (KALLE & Co.), i, 1834.
- Perylenetetracarboxylic acid**, tetra-chloro-, and its imide (KALLE & Co.), i, 1277.
- Petroleum**, helium in gas from (CLAY), ii, 1195.  
 sulphur compounds in (BIRCH and NORRIS), i, 628.  
 action of sodium hypochlorite on (BIRCH and NORRIS), i, 1229.
- Niitsa**, naphthenic acids from (TANAKA, NAGAI, and ISHIDA), i, 252.
- Nishiyama**, naphthenic acids from (TANAKA and NAGAI), i, 1271.

- Petromyzon fluviatilis*, detection of amino-acids and other constituents in (FLÖSSNER and KUTSCHER), i, 327.
- Phanerogams**, heterotrophic, chemistry of (ZELLNER), i, 1025.
- Phase rule** and moving boundaries (SMITH), ii, 399.
- Phaseolus lunatus*, enzymes of (ROSENTHALER), i, 1008.
- Phaseolus radiatus*, vitamin-A and albumin in germinating seeds of (DONATH), i, 483.
- o*-Phenacyloxybenzyl bromide (FREUDENBERG, FIKENTSCHER, and HARDER), i, 420.
- Phenanthraphenazinazine**, and amino-, bromo-, bromonitro-, hydroxy-, and nitro- (SIRCAR and DUTT), i, 593.
- Phenanthraphenazine-2:7-bis(1'-azo-2'-hydroxy-3'-naphthoic acid** (SIRCAR and GUPTA), i, 984.
- Phenanthraphenazine-2:7-bis(1'-azo-2'-naphthol** (SIRCAR and GUPTA), i, 984.
- Phenanthraquinol phenyl ether** (GOLDSCHMIDT, VOGT, and BREDIG), i, 1434.
- Phenanthraquinone**, action of, on aromatic aldehydes in presence of ammonia (SIRCAR and RAY), i, 980.
- Phenanthraquinone**, diamino-, diamino-dihydroxy-, and tetrahydroxy-, and their derivatives (BRASS and NICKEL), i, 273.
- Phenanthraquinone colouring matters** (SIRCAR and DUTT), i, 593; (SIRCAR and GUPTA), i, 983.
- Phenanthraquinonetetrazonium perbromides** (BRASS and NICKEL), i, 273.
- Phenanthraquinonyl-3-azide**, acid decomposition of (BRASS and NICKEL), i, 446.
- Phenanthraquinonyl-3-diazonium perbromide** (BRASS and NICKEL), i, 447.
- Phenanthrazine** (GOLDSCHMIDT, VOGT, and BREDIG), i, 1434.
- Phenanthrene**, hydrogenation of (SCHROETER, VAN HULLE, and MÜLLER), i, 130.
- action of aluminium chloride on a mixture of *m*-xylene and (SCHAAR-SCHMIDT, MAYER-BUGSTRÖM, and SEYON), i, 241.
- Phenanthrene**, 9-bromo-10-hydroxy- (GOLDSCHMIDT, VOGT, and BREDIG), i, 1435.
- Phenanthrol**, oxidation products of (GOLDSCHMIDT, VOGT, and BREDIG), i, 1435.
- 10-Phenanthryl peroxide**, 9-bromo- (GOLDSCHMIDT, VOGT, and BREDIG), i, 1435.
- Phenarsazinic acid**, and its salts and derivatives (BURTON and GIBSON), i, 84.
- Phenazine**, 1-amino- and 1:3-diamino-, and their acetyl derivatives (KEHRMANN and PRUNIER), i, 304.
- 3-amino-7- and -8-hydroxy-, 8:7-dihydroxy-, 3-nitro-7- and -8-hydroxy-, and their derivatives (KEHRMANN and HAENNY), i, 1330.
- 2-hydroxy-, and its derivatives (KEHRMANN and OBERPILLOD), i, 303.
- 3-*p*-Phenetidino-5-ketoisooxazole** (WORRALL), i, 308.
- 3-*p*-Phenetidino-5-ketopyrazole** (WORRALL), i, 308.
- Phenetole**, 2:4:5-trichloro- (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 1145.
- trinitro-, and trinitroanisole, alcoholysis of (BRADY and HORTON), i, 1409.
- o*- and *p*-Phenetolesulphonylacetones, and their derivatives (TRÖGER and BROHM), i, 1453.
- 3-*o*- and *p*-Phenetolesulphonyl-2-methylquinolines, and their salts and derivatives (TRÖGER and BROHM), i, 1453.
- p*-Phenetylcaramide (*dulein*), constitution of (TÄUFEL and WAGNER), i, 841.
- changes in the sweetening power of (THOMS), i, 538.
- Phenol**, ultra-violet absorption by benzoic acid and (KEPIANKA and MARCHLEWSKI), ii, 179.
- heats of formation of aqueous solutions of (FERGUSON and HOPE), ii, 492.
- surface tension of aqueous solutions of (GOARD and RIDEAL), ii, 610.
- vapour pressure of aqueous solutions of (FERGUSON and FUNNELL), ii, 501.
- vapour pressure of mixtures of, with various compounds (WEISSENBARGER, SCHUSTER, and SCHULER), ii, 649.
- influence of another substance on the critical temperature of aqueous solutions of (DUCKETT and PATTERSON), ii, 381.
- surface tension of aqueous solutions of (GOARD and RIDEAL), ii, 961.
- salting-out of, from aqueous solution (HAFNER and KÜRTHY), ii, 283.
- molecular state of, in benzene solution (PHILIP and CLARK), ii, 770.
- equilibrium of salicylic acid, water, and (BAILEY), ii, 1064.
- condensation of benzyl alcohol and (HUSTON), i, 249.

- Phenol**, condensation of carbon tetrachloride and (GOMBERG and SNOW), i, 660.  
determination of, in blood (HAAS and SCHLESINGER), i, 334.
- Phenol**, *p*-amino-, sulphate, preparation of (HORII and KOMORI), i, 1410.  
*tribromo*-, and its derivatives (KOHN and STRASSMANN), i, 1264.  
3-chloro-*mono*-, *di*-, and *tri*-nitro derivatives, and their derivatives (HODGSON and MOORE), i, 1144.  
3-chlorodinitro- (SANÉ and JOSHI), i, 134.  
2:4:5-*trichloro*-, butyl carbiny l ethers of (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 1145.  
thio-, action of anisilic and benzilic acids on (BISTRZYCKI and RISI), i, 1426.
- Phenols**, heats of solution of, in water (DE KOLOSOVSKI), ii, 540.  
catalytic hydrogenation of (VAVON and BERTON), i, 806.  
catalytic dehydration of mixtures of alcohols and (BRINER, PLÜSS, and PAILLARD), i, 248.  
oxidation of (PUMMERER, PUTTFARCKEN, and SCHOPFLOCHER), i, 1262.  
molecular compounds of (WEISSENBERGER and PIATTI), i, 538, 539; (WEISSENBERGER and SCHUSTER), ii, 648, 765; (WEISSENBERGER SCHUSTER, and SCHULER), ii, 649; (WEISSENBERGER, SCHUSTER, and MAYER), ii, 766.  
with 4:4'-dipyridylum dialkyl halides (EMMERT and ROH), i, 587.  
binary systems of, with acids or esters (KREMANN, ZECHNER, and DRAZIL), ii, 650.  
alkylation of (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656; (CLAISEN), i, 1410.  
condensation of, with citric acid (MÜLLER), i, 1442.  
condensation of diphenylformamidine with (SHOESMITH and HALDANE), i, 39.  
nitrosation of (HODGSON and MOORE), i, 1408.  
esterification of oxalic acid with (FEIGL and KOBILANSKY), i, 1235.  
preparation of mercury derivatives of (SACCHARIN-FABRIK AKTIEN-GESELLSCHAFT VORM. FAHLBERG, LIST & Co.), i, 1197.  
mercuri compounds of. (WELLCOME FOUNDATION, LTD., HENRY, and SHARP), i, 1154.
- Phenols**, monohydric, alkyl ethers of, and their halogen derivatives (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 1145.  
polyhydric, association of (ROUYER), i, 911.  
detection of, in plants (WARE), i, 1122.  
determination of, in essential oils (RETI), ii, 604.
- Phenols**, amino-, catalytic reduction of (HECKEL and ADAMS), i, 909.  
action of sulphuryl chloride on (ELLER and LORENZ), i, 537.  
diazo derivatives, thermochemistry of (SWIENTOSLAWSKI and BLASZKOVSKA), ii, 1044.  
*o*-amino-, migration from nitrogen to oxygen in (RAIFORD and LANKELMA), i, 809.  
bromo- (KOHN and FINK), i, 133; (KOHN and JAWETZ), i, 135; (KOHN and WIESEN), i, 539; (KOHN and WEISSBERG), i, 655; (KOHN and GUTTMANN), i, 1263; (KOHN and LÖFF; KOHN and STRASSMANN; KOHN and MARBERGER), i, 1264; (KOHN and GRÜN), i, 1265.  
2- and 3-bromo-4-nitroso-, and 2-iodo-4-nitroso- (HODGSON and MOORE), i, 1408.  
nitro-, equilibria of, with camphor (KREMOV), ii, 1180.  
action of, with *p*-toluenesulphonyl chloride (SANÉ and JOSHI), i, 134.  
phenylcarbamates of (BRADY and HARRIS), i, 1261.  
determination of (DESVERGNES), ii, 447.  
*trinitro*-, determination of (DESVERGNES), ii, 447.  
nitroamino-, detection of, in urine (DESVERGNES), i, 328.  
nitroso-, reduction of, with alkali sulphides (POBAL-KOSCHITZ), i, 1060.
- Phenolisatein** (SEN and SIRCAR), i, 555.
- Phenylmercurisulphonie acid** (SACCHARIN-FABRIK AKTIEN-GESELLSCHAFT VORM. FAHLBERG, LIST & Co.), i, 1197.
- Phenolphthalein**, effect of alcohol and salts on dissociation of (RICHTER), ii, 237.
- iso*Phenolphthalein, and its derivatives (ORNDORFF and BARRETT), i, 35.
- Phenolphthalin**, detection of hydrocyanic acid with (STAMM), ii, 76.
- iso*Phenolphthalin, and its diacetate (ORNDORFF and BARRETT), i, 36.

- Phenolresorcinolphthalein, and its derivatives (SEN and SIRCAR), i, 554.
- Phenolsulphonophthalein, adsorption of, by charcoal and proteins (GROLLMAN), i, 1000.
- effect of alkalis on colour of (HUBBARD and MEEKER), i, 1115.
- diethyl and dimethyl ethers (ORNDORFF and SHAPIRO), i, 251.
- determination of, in urine in jaundice (ABRAMSON), i, 329.
- o*- and *p*-Phenolsulphonic acids, action of nitrous acid on (RODIONOV and MATVEEV), i, 83.
- 2:3-isoPhenosafranine, and its salts (HOEHN), i, 938.
- Phenoxarsine, 6-chloro- (TURNER and SHEPPARD), i, 705.
- Phenoxarsines, chloro-, formation of, from phenoxyphenyldichloroarsines (ROBERTS and TURNER), i, 1339.
- dichloro- (ROBERTS and TURNER), i, 1340.
- Phenoxarsinic acids, chloro- (ROBERTS and TURNER), i, 1340.
- Phenoxides, metallic, preparation of (ZETZSCHE, SILBERMANN, and VIRLI), i, 1411.
- Phenoxyacetic acid, 2:4-dinitro- (CHRISTIANSEN), i, 817.
- Phenoxyacetic acids, hyperthermic action of (MANELI and FILIPPI), i, 466.
- 3-( $\epsilon$ -Phenoxyamylamino)butylbenzamide hydrochloride (v. BRAUN and ZOBEL), i, 1455.
- o*-Phenoxybenzenazo- $\beta$ -naphthol- (TURNER and SHEPPARD), i, 706.
- $\alpha$ -Phenoxybutyl alcohol (BAKKELAND and BENDER), i, 639.
- $\epsilon$ -(5-Phenoxybutylamino)amylbenzamide hydrochloride (v. BRAUN and ZOBEL), i, 1456.
- 3-Phenoxybutylmalonic acid, and its ethyl ester, and  $\alpha$ -bromo- (MARVEL, MACCORQUODALE, KENDALL, and LAZIER), i, 234.
- $\alpha$ -Phenoxy- $\alpha$ - $\beta$ -dibenzoyl ethylene (CONANT and LUTZ), i, 682.
- 9-Phenoxy-2:9-diethoxy-9:10-dihydro-acridine (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 429.
- $\beta$ -Phenoxydiethyl ether,  $\beta$ -chloro- (CRETCHER, KOCH, and PITTENGER), i, 627.
- 9-Phenoxy-2-ethoxyacridine (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 429.
- $\alpha$ -Phenoxyhexoic acid,  $\alpha$ -bromo- (MARVEL, MACCORQUODALE, KENDALL, and LAZIER), i, 235.
- m*- and *p*-Phenoxyethylbenzonitriles (v. BRAUN and REICH), i, 1405.
- p*-Phenoxyethylbenzyl alcohol (v. BRAUN and REICH), i, 1405.
- p*-Phenoxyethylbenzyl bromide (v. BRAUN and REICH), i, 1405.
- m*- and *p*-Phenoxyethylbenzylamines, and their salts and derivatives (v. BRAUN and REICH), i, 1405.
- Phenoxy-*P*-oxotetrahydrodiazaphospholium (AUTENRIETH and BÖLLI), i, 1469.
- Phenoxy-*P*-oxydihydrobenzodiazaphospholium (AUTENRIETH and BÖLLI), i, 1468.
- 9-Phenoxy-10-phenanthryl peroxide (GOLDSCHMIDT, VOGT, and BREDIG), i, 1434.
- o*-Phenoxyphenylarsinic acid (TURNER and SHEPPARD), i, 706.
- Phenoxyphenylarsinic acids, and chloro- (ROBERTS and TURNER), i, 1440.
- o*-Phenoxyphenyldichloroarsine (TURNER and SHEPPARD), i, 706.
- and its chloro-derivatives, conversion of, into chlorophenoxarsines (ROBERTS and TURNER), i, 1339.
- Phenoxyphenyldichloroarsines, chloro- (ROBERTS and TURNER), i, 1340.
- Phenoxy-*p*-thiodihydrodiazaphospholium (AUTENRIETH and MEYER), i, 990.
- Phenyl allyl ether, *p*-oximinoamino-, acetyl derivative (KARRER, DIECHMANN, and HAEBLER), i, 243.
- allyl ethers, transformation of (CLAISEN and TIETZE), i, 389.
- benzhydryl sulphide (BISTRZYCKI and RISI), i, 1426.
- benzoate, *m*-bromo- and 3:5-dibromo- (KOHN and FINK), i, 133.
- benzyl ether, *s*-tribromo-, and its nitro derivatives (HOLMES and INGOLD), i, 1142.
- benzyl ether and sulphide, *o*-amino-, and *o*-nitro-, and their derivatives (SIGELTIZ and KOCH), i, 278.
- $\beta$ -chloroethyl sulphide, and *o*-nitro- (LECHER, HOLSCHNEIDER, KÖBERLE, SPEER, and STÖCKLIN), i, 390.
- cinnamyl and  $\gamma$ -phenylpropyl ethers (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656.
- 4:4'-dimethoxybenzhydryl sulphide (BISTRZYCKI and RISI), i, 1426.
- di-*p*-tolylthiophosphate (AUTENRIETH and MEYER), i, 807.
- groups, migration of *p*-anisyl and (TIFFENEAU and ORÉHOV), i, 679.
- hydrogenthiosulphate, 2:4-dihydroxy-, and its potassium salt (HELLER), i, 315.

- Phenyl hydroxyphenylalkyl ethers (BAEKELAND and BENDER), i, 689.
- o*-iodobenzyl ether, *o*-iodo- (SIEGLITZ and KOCH), i, 278.
- p*-methylaminophenyl sulphide, and its derivatives (RIVIER and RICHARD), i, 1417.
- $\alpha$ -methyl- $\Delta\beta$ -butenyl ether (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656.
- $\beta$ -phenylethyl ether, *o*-amino-, *o*-hydroxy-, and *o*-nitro-, and their derivatives (SIEGLITZ and KOCH), i, 278.
- cyclopropylmethyl ether (v. BRAUN, FUSSENGER, and KUHN), i, 1402.
- Phenyl-4-acenaphthylmethane (LORRIMAN), i, 673.
- Phenyl-4'-acenaphthylmethane-2-carboxylic acid (LORRIMAN), i, 673.
- Phenyl-4-acenaphthylphthalide (LORRIMAN), i, 672.
- Phenylacetaldehyde-ammonia (GRIGNARD and ESCOURROU), i, 931.
- $\beta$ -Phenylacetaldimine, and its hydrochloride (GRIGNARD and ESCOURROU), i, 931.
- 3-Phenylacetamido-*p*-cresol, 5-chloro-, and its *p*-toluate (RAIFORD and LANKELMA), i, 810.
- Phenylacetic acid, hydroxylamine salt (OESPER and BALLARD), i, 1233.
- d*- and *l*-Phenylacetic acids,  $\alpha$ -bromo- and  $\alpha$ -chloro-, bornyl esters (MCKENZIE and SMITH), i, 822.
- Phenylacetomethylamide, *o*-nitro- (NEBER, HARTUNG, and RUOPP), i, 1073.
- Phenylaceto- $\beta$ -phenylethylamide, *o*-amino- (GADAMER, OBERLIN, and SCHÖBLER), i, 576.
- 3-Phenylacetoxymethyl-6-methylbenzothioopyrone (KAOLPFIEFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.
- o*-Phenylacetyldeoxybenzoïn (WEISS and SONNENSCHNIG), i, 937.
- Phenylalkylcyanoacetamides (THOMPSON, BRIDELL, and BUFFETT), i, 699.
- Phenylalkylhydantoins (THOMPSON, BRIDELL, and BUFFETT), i, 699.
- 3-Phenyl-3-allyl-4:5-benzocoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 148.
- 3-Phenyl-3-allylcoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 148.
- 3- $\alpha$ -Phenylallyl-*p*-cresol, and its phenylcarbamate (CLAISEN and TIETZE), i, 389.
- 2-Phenyl-2-allyldiketohydrindene, spiran derivatives of (RADULESCU), i, 1159.
- o*- $\alpha$ -Phenylallylphenol, and its phenylcarbamate (CLAISEN and TIETZE), i, 389.
- $\alpha$ -Phenyl- $\alpha$ -allylsuccinamic acid, ethyl ester (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 376.
- $\alpha$ -Phenyl- $\alpha$ -allylsuccinimide (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 376.
- 1-Phenyl-4-allylthiosemicarbazide, *o*-nitro- (GUHA and RAY), i, 1462.
- Phenyltetraaminobenzene, and its derivatives (KEHRMANN and STANOVÉVITCH), i, 1332.
- 2-Phenyl-4-aminomethylquinoline, and its salts (JOHN), i, 1317.
- 4-Phenyl-1-*o*-aminophenylthiosemicarbazide (GUHA and RAY), i, 1462.
- Phenyl aminostyryl ketones, perchlorates of (PFEIFFER), i, 410.
- Phenylisocamylidithiocarbamic acid, salts of (WHITBY and MATHESON), i, 644.
- 4-Phenyl-3-anisyl-2-anisylidene-5-methyl- $\Delta^2$ -cyclopenten-1-one (RYAN and LENNON), i, 1282.
- 3-Phenyl-4-*p*-anisylecoumarin, 7-hydroxy-, and its acetyl derivative (BARGELLINI), i, 1442.
- $\beta$ -Phenyl-8-anisylethylamine,  $\beta$ -hydroxy-, action of nitrous acid on (ORÉKHOV and ROGER), i, 262.
- $\alpha\alpha$ -Phenyl-*p*-anisylethylene iodohydrin (TIFFENEAU and ORÉKHOV), i, 680.
- $\alpha$ - and  $\beta$ -Phenylanisylfuroxanes (MEISENHEIMER, LANGE, and LAMPARTER), i, 1075.
- 4-Phenyl-3-anisyl-5-methyl- $\Delta^2$ -cyclopenten-1-one (RYAN and LENNON), i, 1282.
- 1-Phenyl-3-*p*-anisyl-5-methylpyrazole-4-carboxylic acid, and its ethyl ester (MINUNNI, LAZZARINI, and D'URSO), i, 1176.
- Phenyl-*p*-anisyl- $\alpha$ -naphthylmethane (DILTHEY), i, 651.
- Phenyl-*p*-anisyl- $\alpha$ -naphthylmethyl bromide and chloride (DILTHEY), i, 651.
- Phenylanisylpyrazolines, acetyl derivatives, and 4-hydroxy- (FREUDENBERG and STOLL), i, 70.
- Phenylarsenious oxide, 3-nitro-4-hydroxy- (CHRISTIANSEN, NORTON, and SHOHAN), i, 1471.
- Phenyl-1-arsenoxide-4-stibinoxide (CHEMISCHE FABRIK VON HEYDEN), i, 86.
- Phenylarsinic acid, *p*-amino-, salts of, crystal structure of (GILTA), ii, 93.
- action of pyruvic acid and, on aldehydes (ADAMS and JOHNSON), i, 319.

- Phenylarsinic acid, *p*-amino-, benzoyl, aminobenzoyl, and nitrobenzoyl derivatives of, and their derivatives (KING and MURCH), i, 319.
- 3-amino-4-hydroxy-, 3-acetyl derivative, bismuth salt, action of, in syphilis (LEVADITI), i, 1005; (FOURNIER and SCHWARTZ), i, 1006.
- 4-amino-3-hydroxy-, action of carbonyl chloride on (CASSELLA & Co.), i, 172.
- 3-chloro-2-amino-4-hydroxy- and its acetyl derivative, and 3-chloro-2-nitro-4-hydroxy- (CASSELLA & Co.), i, 1471.
- 3-oximinoamino-4-hydroxy-, 3-acetyl derivative (KARRER, DIECHMANN, and HAEBLER), i, 243.
- Phenylarsinic acids, diamino- and nitro-amino-, benzoyl derivatives (HAMILTON and MAJOR), i, 990.
- Phenyl-1-arsinic acid-3-stibinic acid, 4-hydroxy- (CHEMISCHE FABRIK VON HEYDEN), i, 86.
- Phenylarsinodicarboxylic acid, ethyl ester (JOB, REICH, and VERGNAUD), i, 178.
- Phenylazodiacetylsuccinic acid, *p*-amino-, acetyl derivative, ethyl ester (BÜLOW and BAUR), i, 1327.
- Phenylbarbituric acid, bromo- (VOORHEES and SKINNER), i, 837.
- 2-Phenyl-1:3-benzdiazole, and its hydrochloride (GUHA and RAY), i, 1462.
- N*-Phenylbenzimidophenyl ether, and its chloro-derivatives, molecular rearrangement of (CHAPMAN), i, 1400.
- 3-Phenylbenzopyran, bromohydroxy- and hydroxy-, and their derivatives (KAHIL and NIERENSTEIN), i, 53.
- 2-Phenylbenzopyrylium chloride, 3:5:7-2:2':4'-pentahydroxy-. See Morinidin chloride.
- 1-Phenylbenzoxazole, 1-*o*-hydroxy- (v. AUWERS and JORDAN), i, 265.
- 3-Phenyl-3-benzoylcoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 148.
- Phenylbenzoyldiazomethane, reaction of carbon disulphide with (MEYER), i, 424.
- 1-Phenylbenzthiazole methiodide (CLARK), i, 841.
- 2-Phenylbenztriazole, *p*-amino-, *m*-amino-*o*-hydroxy-, *mm'*-di-bromo- and -chloro-*s*-*p*-hydroxy-, dibromodihydroxy-, *p*-mono- and *op*-di-hydroxy-, and their derivatives (ELBS), i, 163.
- 1-Phenylbenztriazole-5-carboxylic acid, 7-amino-, and its acetyl derivative, and 7-nitro- (LINDEMANN and WESSEL), i, 1100.
- 3-Phenyl-3-benzyl-4:5-benzocoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
- 3-Phenyl-3-benzylcoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
- Phenyl benzyl diketone, and its derivatives (MALKIN and ROBINSON), i, 559.
- Phenylbenzyl dimethylammonium iodide, compound of iodoform with (STEINKOPF and BESSARITSCH), i, 495.
- Phenylbenzyl dimethylarsonium iodide, compound of iodoform with (STEINKOPF and BESSARITSCH), i, 496.
- α*-Phenylbenzyl ethyl ketone, semicarbazone (LÉVY and LAGRAVE), i, 679.
- Phenylbenzylglyoxal. See *α*-Diphenylpropan-*αβ*-dione.
- Phenylbenzyl-*p*-hydroxytolylacetic acid, potassium salt (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
- 3-Phenyl-3-benzyl-5-methylcoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
- α*-Phenylbenzyl methyl ketone, semicarbazone (LÉVY and LAGRAVE), i, 679.
- Phenylbenzylmethyl-(methylanilino-ethyl)ammonium nitrate (WEDEKIND and UTHE), i, 536.
- d*-Phenylbenzylmethyl-*β*-phenylmethylaminoethylammonium nitrate, decomposition of, by aniline in chloroform solution (WEDEKIND and UTHE), i, 1059.
- α*-Phenyl-*β*-benzyl-*β*-methylpropane (TROTMAN), i, 383.
- as*-Phenylbenzyl-*p*-phenylenediamine, and its derivatives (DESAI), i, 388.
- Phenyl *o*-benzylphenyl ketone (MAYER and FISCHBACH), i, 1076.
- α*-Phenyl-*β*-benzylpropane, *β*-bromo- (TROTMAN), i, 382.
- α*-Phenyl-*β*-benzylpropan-*β*-ol, *γ*-amino- (THOMAS and BETTZICHE), i, 250.
- Phenylbenzylpyrazoles, chloro- (v. AUWERS and MAUSS), i, 1179.
- 2-Phenyl-3-benzylquinoxaline (MALKIN and ROBINSON), i, 559.
- Phenyl-bis-(3-hydroxy-4:4'-dicarboethoxy-5:5'-dimethyl-2:3'-dipyryl)-methane, and its derivatives (FISCHER and HEYSE), i, 78.
- ω*-Phenylbiuret, and its methyl derivatives (GATEWOOD), i, 805.
- Phenyl *αβ*-di-bromo-*α*-methoxy-*β*-phenylethyl ketone (MALKIN and ROBINSON), i, 559.
- 3-Phenylbromomethyl-6-methylbenzthiopyrone, and its pyridinium salt (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1807.

- 2-Phenyl-6-bromo-4-methylquinoline, and its salts (JOHN and WEBER), i, 1452.
- Phenyl-*p*-bromophenylformamidines, *N*-hydroxy-*N*- and -*N'*-*p*-chloro- (FARROW and INGOLD), i, 155.

- 3-Phenyl-2-methyl-*lin*-naphthiminazole-4:9-quinone (FRIES and BILLIG), i, 939.
- Phenylmethylnitroamine, *trinitro*- (*tetryl*), heat effusion of (RINKENBACH and HALL), ii, 207.
- $\alpha$ -Phenyl- $\beta\beta$ -methylnitrocarbamide, 2:4-*di*nitro- (KNIPHORST), i, 907.
- Phenylmethyl nonylcarbinol (THOMS and AMBRUS), i, 790.
- Phenylmethylisooxazole, *O*-alkyl ethers of (WEYGAND and FRIELING), i, 1288.
- 1-Phenyl-2-methylperimidine, 7-hydroxy-, and its hydrochloride (SANDER), i, 982.
- $\alpha$ -Phenyl- $\beta$ -methylpropane,  $\beta$ -bromo- (TROTMAN), i, 383.
- Phenylmethyl-*n*-propylallyl ammonium iodide (STEINKOFF and BESSARITSCH), i, 496.
- 3-Phenyl-4-methylpyrazole, 5-chloro-, and its hydrochloride (v. AUWERS and MAUSS), i, 1179.
- Phenylmethylpyrazoles, and 4-bromo- (v. AUWERS and SCHMIDT), i, 586.
- 1-Phenyl-5-methylpyrazole-3:4-dicarboxylic acid, 1-*p*-amino-, and its acetyl derivative, and its ethyl ester (BÜLOW and BAUR), i, 1327.

- 5-Phenyl-1-methylpyrazoline hydrobromide, 4-bromo- (V. AUWERS and OTTENS), i, 1429.
- Phenylmethylpyrazolines, and their derivatives (FREUDENBERG and STOLL), i, 70.
- 1-Phenyl-3-methyl-5-pyrazolone, *mono-* and *di-chloro-*, and their derivatives (CHATTAWAY and STROUTS), i, 71.
- Phenylmethylpyrazol-5-ones (V. AUWERS and MAUSS), i, 1179.
- 1-Phenyl-3-methyl-5-pyrazolone-4-azobenzene, 2':4'-*di-chloro-* (CHATTAWAY and STROUTS), i, 72.
- 1-Phenyl-3-methyl-5-pyrazolone-4-azochlorobenzenes, 1-chloro- (CHATTAWAY and STROUTS), i, 71.
- 1-Phenyl-2-methylpyrrolidine, and its methiodide (WOLFF), i, 428.
- 2-Phenyl-4-methylquinolines, substituted (JOHN and NOZICZKA), i, 1451; (JOHN and WEBER), i, 1452.
- 2-Phenyl-4-methylquinolinecarboxylic acids, and their salts and derivatives (JOHN and WEBER), i, 1452.
- Phenylmethylsulphone, derivatives of, and 3-nitro- (TWIST and SMILES), i, 895.
- Phenylmethylsulphone, 4-*mono-* and 2:5-*di-chloro-* (MILLER and SMILES), i, 392.
- Phenylmethyltetrahydroindazoles, and their perchlorates (V. AUWERS, V. SASS, and WITTEKINDT), i, 1182.
- Phenylmethyl*di*thiocarbamic acid, salts of (WHITBY and MATHESON), i, 644.
- 4-Phenyl-6-methylthio-chroman-4-ol- and -chromene (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.
- 1-Phenyl-4-methyl-1:2:3-triazole (BERTHO), i, 840.
- Phenyl-naphthaffluorone, 2':4'-*di*hydroxy- (SEN and SARKAR), i, 812.
- 12-Phenyl- $\alpha$ -naphthaphenazonium salts, 5:12-*m-diamino-*, and their acetyl derivatives (KEHRMANN and LISTVA), i, 1332.
- Phenyl-naphthaphenfluorindines (KEHRMANN and SOHEDLER), i, 442.
- 2-Phenyl- $\alpha$ -naphthatriazole, 4-hydroxy-2-*p-bromo-*, and oxide, 2-*p-bromo-* and 2-*p-chloro-* (CHARRIER, CRIPPA, TOIA, and BIANCHETTI), i, 591.
- Phenyl-naphthophenazonium salts, and amino-, constitution and absorption spectra of (KEHRMANN and SANDOZ), i, 938.
- Phenyl- $\beta$ -naphthylamine-*m-sulphonic* acid (AKTIEN-GESSELLSCHAFT FÜR ANILIN-FABRIKATION), i, 591.
- $\alpha$ -Phenyl- $\beta$ -naphthyl-*n-butane*, and its oxidation products (SCHROETER, VAN HULLE, GLUSCHKE, STIER, and MÜLLER), i, 125.
- Phenyl-naphthylenediamines (LEVI), i, 1186.
- $\beta$ -Phenyl- $\beta$ -1-naphthylethylamine, and its salts (LUCE), i, 264.
- Phenyl  $\alpha$ -naphthylmethyl ketone (LUCE), i, 264.
- Phenyl-1'-naphthylphthalide-4:5'-dicarboxylic acid, and its anhydride (LORRIMAN), i, 672.
- Phenyl-1'-naphthylphthalide-4:4':5'-tricarboxylic acid, and its anhydride (LORRIMAN), i, 673.
- Phenyl- $\alpha$ -naphthylpropylene (LUCE), i, 263.
- 4-Phenyl-1:8-naphthylid-2-one, supposed, constitution of (SEIDE), i, 437.
- Phenyl-2(61)-nitro-6(21)-amino-*m-tolylamine* (BRADY, HEWETSON, and KLEIN), i, 16.
- $\alpha$ -Phenyl- $\beta$ -nitrocarbamide,  $\alpha$ -2:4-*di-nitro-* (GIUA and PETRONIO), i, 1396.
- $\alpha$ -Phenyl-*p-nitro*cinnamic acid, ethyl ester (RANFALDI), i, 399.
- Phenyl *o*-nitrocinnylamidene-methyl ketone (PFEIFFER), i, 409.
- 5-Phenyl-1-*p-nitro*phenyl-3-methylpyrazoline (V. AUWERS and KREUDER), i, 1455.
- 2-Phenyl-4-*o-nitro*phenyl-5-methyl-1:2:3-triazole (NEBER, HARTUNG, and RUOPP), i, 1073.
- Phenyl-4-nitropiase-selenazonium chloride, and *p-hydroxy-* (BATEGAT and VÉCHOT), i, 1467.
- 2-Phenyl-5-oxazolidone, acetyl and benzoyl derivatives (BERGMANN, ENSSLIN, and ZERVAS), i, 891.
- 2-Phenyl-oxazoline-4-carboxylic acid, and its methyl ester and hydrochloride (BERGMANN and MEKELEY), i, 235.
- Phenyl-paraconic acid, *o-bromo-* (FUSON), i, 254.
- m-* and *p-bromo-* (FUSON), i, 540.
- $\epsilon$ -Phenyl- $\Delta^8$ -pentadien- $\alpha$ -al (VORLÄNDER, FISCHER, and KUNZE), i, 1068.
- $\epsilon$ -Phenylpentadienylmalonic acid (VORLÄNDER, FISCHER, and KUNZE), i, 1068.
- $\alpha$ -Phenyl- $\Delta^{\gamma}$ -pentadi-*inene*, and its tetrabromides (PRÉVOST), i, 878.
- $\gamma$ -Phenylpenta- $\beta\delta$ -dione, and its copper salt (MORGAN, DREW, and PORTER), i, 364.
- $\alpha$ -Phenyl- $\gamma$ -pentanol, resolution and rotation of, and its salts and esters (HEWITT and KENTON), i, 914.
- $\alpha$ -Phenyl- $\Delta^{\gamma}$ -pentenenitrile (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 376.

- 3-Phenyl-3-phenacyl-4-5-benzocoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
- 3-Phenyl-3-phenacyl-5-methylcoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
- 9-Phenylphenanthraphenazonium chloride, 11:12-diamino-, and its salts (KEHRMANN and STANOYEVITCH), i, 1332.
- N*-Phenylphenanthraphenfluorindine (KEHRMANN and SCHEDLER), i, 442.
- 2-Phenylphenanthriminazole, and 2'-nitro- (SIRCAR and RAY), i, 980.
- 2-Phenylphenanthroxazole, 2'-hydroxy-, and 2'- and 3'-nitro- (SIRCAR and RAY), i, 980.
- Phenyl  $\beta$ -phenyl- $\alpha$ -*p*-anisylethyl ketone (TIFFENEAU and ORSKHOV), i, 680.
- Phenyl  $\delta$ -phenylbutyl ketone, and its oxime (PFEIFFER, ARMBRUSTER, BACKES, and OBERLIN), i, 270.
- 1-Phenyl-5- $\beta$ -phenylethylbarbituric acid (DOX), i, 301.
- 1-Phenyl-5- $\beta$ -phenylethyl-5-ethylbarbituric acid (DOX), i, 301.
- Phenyl  $\beta$ -phenylethyl ketone dimethyl acetal (STRAUS and EHRENSTEIN), i, 535.
- Phenyl-*N*-phenylnitron, *o*-hydroxy- (BAMBERGER), i, 142.
- Phenyl  $\gamma$ -phenylpropyl ketone, and its semicarbazone (v. AUWERS and MÖLLER), i, 404.
- 4-Phenyl-1-*o*-phenylthiocarbamido-phenylthiosemicarbazide (GUHA and RAY), i, 1461.
- 3-Phenylphenylthiomethyl-6-methylbenzthiopyrone (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.
- 2-Phenyl-4-phthalimidomethylquinoline (JOHN), i, 1317.
- Phenylpiaselenazonium chloride (BATTAGAY and VÉCHOT), i, 1467.
- Phenylpiaselenazonium-4-sulphonic anhydride, and *p*-hydroxy- (BATTAGAY and VÉCHOT), i, 1468.
- 3-Phenylcyclopropane-1:2-dicarboxylic acid, 1-bromo-, methyl esters (HAERDI and THORPE), i, 924.
- Phenylpropionaldehyde, derivatives of (v. AUWERS and OTTENS), i, 1428.
- $\beta$ -Phenylpropionamide,  $\beta$ -amino- (STOSIUS and PHILIPPI), i, 918.
- 2-Phenylpropionic acid, 1- $\alpha$ -amino-3:4-dihydroxy-, detection of, in presence of tyrosine (SCHMALFUSS and WERNER), i, 1361.
- $\beta$ -Phenylpropionic acid,  $\alpha$ -bromo-, amide and nitrile, and  $\alpha$ -cyano- $\beta$ -2:4-dihydroxy- (BAKER and LAPWORTH), i, 30.
- $\beta$ -Phenylpropionic acid,  $\beta$ -bromo-, conversion of, into  $\beta$ -hydroxy- $\beta$ -phenylpropionamide, and its ammonium and diethyl ammonium salts (SENDER and WARD), i, 1128.
- 2:6-dihydroxy- (CHAPMAN and STEPHEN), i, 669.
- $\beta$ -Phenylpropionic acids,  $\beta$ -hydroxy-, conversion of, into  $\beta$ -bromo- $\beta$ -phenylpropionic acids (SENDER and WARD), i, 31.
- $\beta$ -Phenylpropionic anhydride (ROBINSON and SHINODA), i, 1301.
- $\beta$ -Phenylpropionitrile,  $\alpha$ -bromo- (FREUDENBERG, FIKENTSCHER, and HARDER), i, 420.
- Phenylpropionylmandelic acids, ethyl and methyl esters (FREUDENBERG and MARKERT), i, 1275.
- $\alpha$ -Phenylpropylamine, salts of (MAZOUREVITCH), i, 1240.
- N*- $\gamma$ -Phenylpropylaniline, and its hydrochloride (BAMBERGER), i, 142.
- $\alpha$ -Phenyl- $\Delta^{\alpha}$ -propylene,  $\beta$ -chloro- $\alpha$ -2:4-dinitro- (NEBER, HARTUNG, and RUOPP), i, 1078.
- $\alpha$ -Phenylisopropylhydrazine, and its salts and derivatives (GOODWIN and BAILEY), i, 843.
- Phenyl isopropyl ketone, 2:4-dihydroxy- (SHARP and DOHME and DOHME), i, 541.
- Phenylisopropylsemicarbazides, and their derivatives (GOODWIN and BAILEY), i, 843.
- $\alpha$ -Phenylisopropylsuccinamic acid, ethyl ester (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 376.
- $\alpha$ -Phenyl- $\alpha$ -isopropylsuccinimide (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 376.
- 1-Phenyl-4-isopropyl-1:2:3-triazole (BERTHO), i, 840.
- 2-Phenyl-1-isopropylrazole (GOODWIN and BAILEY), i, 843.
- 3(5)-Phenylpyrazole, and its derivatives (v. AUWERS and SCHMIDT), i, 585.
- 3(5)-Phenylpyrazole, 4-bromo-, hydrobromide (v. AUWERS and OTTENS), i, 1460.
- Phenylpyrazoles, chloro-, acetyl, benzoyl, and nitrobenzoyl derivatives of (v. AUWERS and MAUSS), i, 1180.
- 3-Phenylpyrazole-1-carboxylamide, and 4-bromo- (v. AUWERS and OTTENS), i, 1460.
- 5-Phenylpyrazole-1-carboxylamide (v. AUWERS and OTTENS), i, 1460.
- 3-Phenylpyrazoline, derivatives of (FREUDENBERG and STOLL), i, 70.
- 1-Phenylpyridinium iodide, 3-bromo- and 3-iodo- (BAUMGARTEN), i, 1381.

- 1-Phenylpyridinium salts, and 1-amino-, 4-chloro-, and 1-nitro- (VORLÄNDER), i, 1256.
- 1-Phenyl-4-pyridone, and 1-*p*-amino-, *p*-chloro-, *p*-hydroxy-, and *p*-nitro- and their salts (VORLÄNDER), i, 1257.
- 1-Phenylpyrrole, compounds of, with mercuric chloride (PLANCHER and ROSSI), i, 601.
- 1-Phenylpyrrole, *di*bromo- (PLANCHER and ROSSI), i, 601.
- 1-Phenyl-5-pyrrolidone-4-carboxylic acid (KÜSTER and GRÄSSNER), i, 922.
- 4-Phenyl-2-pyrrolidone-5-carboxylic acid, and 4'-amino-, 3':5'-*di*iodo-4'-amino-, 3':4'5'-*tri*iodo-, and 4'-nitro- (HARRINGTON), i, 1094.
- Phenylpyruvic acid, and its ethyl ester, *p*-tolylhydrazones (WALKER), i, 1193.
- Phenylpyruvic acid, 2-nitro-4-cyano-, ethyl ester (KERMACK), i, 67.
- 2-Phenyl-4-quinazoline, 3-amino-, and its derivatives (HELLER, GÖRING, KLOSS, and KÖHLER), i, 1822.
- 2-Phenylquinoline-4-aldehyde, and its phenylhydrazone, preparation of (CHEM. FABRIK AUF AKTIEN, VORM. E. SCHERING), i, 1452.
- 2-Phenylquinoline-4-carboxylic acid, bismuth salts (RIEDEL), i, 1170.
- Phenyl-8-quinolylamine-*p*-carboxylic acid, *o*-nitro- (SEKA), i, 587.
- 8-Phenyl-8-quinolylcarbamide (SEKA), i, 587.
- 2-Phenyl-4-quinolyl 2-methylaminobutyl ketone, and its dihydrochloride (RUZICKA, SEIDEL, and LIEBL), i, 290.
- 2-Phenyl-4-quinolyl 3-*N*-methyl-2-piperidonyl ketone, and its picrate (RUZICKA, SEIDEL, and LIEBL), i, 290.
- 3-Phenylquinoxaline, 3-*o*-hydroxy- (FRIES and SARTIEN), i, 570.
- 8-Phenylrhodanylidene- $\Delta^{5:8}$ -oxindoles (HANN), i, 987.
- Phenylselenoglycollic acid, and *p*-bromo-, and their salts (MORGAN and PORRITT), i, 1196.
- Phenylselenoxyglycollic acid, *p*-bromo-, and its salts (MORGAN and PORRITT), i, 1196.
- Phenylsemicarbazide, action of, on acetylacetone (WHEELER and BROOKS), i, 1459.
- 2-Phenylsemicarbazide (GOODWIN and BAILEY), i, 318.
- 4-Phenylsemicarbazide, 2':4'-*di*nitro-, and its semicarbazones (KNIPHORST), i, 907.
- Phenylstilbinic acid, *p*-amino-, sodium salt, glucoside of (WELLCOME FOUNDATION, LTD., and GRAY), i, 991.
- Phenylstilbazonium salts, 3-chloro- (KEHRMANN and FALKE), i, 303.
- 2-Phenyl-4-styrylbenzopyrylium chloride, 4:5:7-*tri*hydroxy- (WALKER and HEILBRON), i, 693.
- Phenyl styryl ketone (*benzylideneacetophenone*), 4-hydroxy-, glucoside (BARGELLINI and LEONE), i, 1283.
- Phenyl styryl ketones, isomeric (DILTHEY and RADMACHER), i, 408.
- Phenylsuccinic acid, *p*-hydroxy- (CHRASZCZEWSKA), i, 956.
- Phenylsulphur chloride, 2:5-*di*chloro- (MILLER and SMILES), i, 392.
- 9-Phenyltetrahydrocarbazole, and 5(?)nitro- (LINNELL and PERKIN), i, 63.
- 9-Phenyl-1:2:3:4-tetrahydrocarbazole-8-carboxylic acid, 2'-amino- (LINNELL and PERKIN), i, 63.
- 4-Phenyltetrahydro-1:4-oxazine, and a green colouring matter therefrom (ADKINS and SIMINGTON), i, 986.
- 2-Phenyl-4:5:6:8-tetramethylquinoline, and its salts (JOHN and WEBER), i, 1452.
- 2-Phenyl-1:2:3:4-tetrazole, 5-amino-, and its derivatives (STOLTE and ORTH), i, 1464.
- 2-Phenyl-1:2:3:4-tetrazole-5-carboxylic hydrazide, and its derivatives (STOLTE and ORTH), i, 1464.
- Phenylthiarsane, and its salts (JOB, REICH, and VERGNAUD), i, 173.
- 4-Phenylthiazole, 2-amino-, and its derivatives (BOGERT and CHERTCOFF), i, 315.
- 4-Phenyl-1-thiazole-5-carboxylic acid, 2-amino-, ethyl ester (HIRST, MACBETH, and TRAILL), i, 1251.
- Phenyl- $\alpha$ -thienylmethylcarbamide (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.
- Phenylthiocarbamide, condensation of diethylamine with (HUNTER), i, 805.
- $\alpha$ -Phenylthiodi-*p*-anisylacetic acid, and its barium salt (BISTRZYCKI and RISI), i, 1426.
- 5-Phenyl-1:3:4-thiadiazine, 2-amino-, and its derivatives (BOSE), i, 167.
- 3-Phenyl-2-thiohydantoin- $\Delta^{5:7}$ - $\psi$ -indoxyl (HILL and HENZE), i, 306.
- 3-Phenyl-2-thiohydantoin- $\Delta^{5:7}$ -oxindole (HILL and HENZE), i, 306.
- $\beta$ -Phenylthiol- $\gamma$ -butyric acid (KROLL-PFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.
- Phenylthiocarbamic acid, benzyl and *p*-tolyl esters (GILMAN and KING), i, 811.
- $\beta$ -Phenylthiodiethyl ether,  $\beta$ -chloro- (CRETCHER, KOCH, and PITTINGER), i, 628.

- α*-Phenylthioldiphenylacetic acid, and its salts and acid chloride (BISTRZYCKI and RISI), i, 1426.
- 3-Phenylthiolhydantoin, 3-*p*-nitro- (COGHILL and JOHNSON), i, 582.
- β*-Phenylthiolpropionic acid, *β*-*p*-bromo- (ARNDT), i, 1809.
- β*-*p*-chloro- (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1805.
- Phenylthiophens, amino-, iodo-, and nitro- (CHRASZCZEWSKA), i, 956.
- Phenylthiophosphordihydrazide, dibenzylidene derivative (AUTENRIETH and MEYER), i, 990.
- 4-Phenylthiosemicarbazide, bromo- and chloro- (GUHA and RAY), i, 703.
- Phenylthiosemicarbazides, action of benzoyl chloride on (FROMM and TRUKA), i, 703.
- Phenyl-*p*-tolyl-4-acenaphthylmethane (LORRIMAN), i, 673.
- Phenyl-*p*-tolyl-4'-acenaphthylmethane-2-carboxylic acid, and its methyl ester (LORRIMAN), i, 673.
- Phenyl-*p*-tolylacetic acid, benzyl ester (RAMART and AMAGAT), i, 659.
- 5-Phenyl-3-*o*-tolyl-1-*p*-anisyl-2-*p*-chlorophenyl-1:2:3:6-tetrahydro-1:3:4-triazine (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.
- 5-Phenyl-3-*o*-tolyl-1-*p*-anisyl-2-*p*-dimethylaminophenyl-1:2:3:6-tetrahydro-1:3:4-triazine (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.
- 5-Phenyl-3-*o*-tolyl-1-*p*-anisyl-2-methyl-1:2:3:6-tetrahydro-1:3:4-triazine (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.
- 5-Phenyl-3-*o*-tolyl-1-*p*-anisyl-1:2:3:6-tetrahydro-1:3:4-triazine (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.
- Phenyl-*p*-tolylbenzylacetic acid, and its benzyl ester (RAMART and AMAGAT), i, 659.
- 5-Phenyl-1-tolyl-3-*tert*.-butylpyrazolines (v. AUWERS and KREUDER), i, 1455.
- Phenyltolylcarbamides, *d*initro- (KNIPFORST), i, 907.
- 5-Phenyl-3-*o*-tolyl-1:2-di-*p*-anisyl-1:2:3:6-tetrahydro-1:3:4-triazine (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.
- β*-Phenyl-*β*-*p*-tolylethyl alcohol (RAMART and AMAGAT), i, 659.
- Phenyl-*p*-tolylformamidines, *N*-hydroxy-, and their derivatives (FARROW and INGOLD), i, 155.
- 1-Phenyl-1-*o*-tolyl-3-methylpyrazole, 3-*p*-nitro- (v. AUWERS and KREUDER), i, 1454.

- Röntgen ray spectrum of (LUNDQUIST), ii, 1014.
- series spectra of (BOWEN and MILLIKAN), ii, 342, 610.
- luminescence of (EMELÉUS and DOWNEY), ii, 89; (EMELÉUS), ii, 354.
- critical potential of (HOLWECK), ii, 729.
- action of, on nickel nitrate (SCHMOSS), ii, 889.
- effect of, on lipins and fats in the liver (SACCHETTO), i, 1357.
- in blood of children (ANDERSON), i, 188.
- metabolism. See Metabolism.
- black, Röntgen ray structure of (LINCK and JUNG), ii, 1035.
- red, action of, on carbon disulphide solutions of (TRAXLER and GERMANN), ii, 1087.
- white, doubly-refractive (VORLÄNDER, SELKE, and KREISS), ii, 1086.
- yellow, effect of, on bone formation (BERNHARDT and RABL), i, 1357.
- Phosphorus compounds, *K* absorption spectra of (STELLING), ii, 935.
- in milk (KAY), i, 998.
- effect of heat on solubility of, in milk (BELL), i, 998.
- fixation of, in bones (TELFER), i, 859.
- determination of, in blood, and their distribution (STANFORD and WHEATLEY), i, 1200.
- Phosphorus tribromide and triiodide, preparation of (REKSOHINSKI), ii, 994.
- trichloride, hydrolysis of (MITCHELL), ii, 316.
- chlorides, action of ammonia on (PÉROT), ii, 1186.
- oxychloride, electrolysis in, and its physical constants (Cady and TAFT), ii, 1073.
- influence of, on the catalytic reduction of acid chlorides (ZETZSCHE and ARND), i, 1415.
- trihydride (*phosphine*), spectrum of the combustion of (EMELÉUS), ii, 740.
- triiodide, preparation of sulphide compounds of (KARANTASSIS), ii, 998.
- nitride, nitrification of (ALLISON), i, 218.
- trioxide, preparation of, and spectrum of its combustion (EMELÉUS), ii, 740.

**Phosphorus pentoxide**, vapour pressure of (SMITS and RUTGERS), ii, 268.

purification of (WHITAKER), ii, 1195.

drying tube for (DENNIS), ii, 428.

**Phosphorous acid** and its derivatives, constitution and *K* absorption spectra of (STELLING), ii, 936.

**Phosphoric acid**, constitution of (FRÖSCHL), ii, 19.

esterification of, by yeast (GOTTSCALK and NEUBERG), i, 337.

formation of, in muscle (LANGE and MAYER), i, 729.

esters, synthesis of (KOMATSU and NODZU), i, 515.

detection of (FRIGL), ii, 435.

determination of (McCANDLESS and BURTON), ii, 157; (JÖRGENSEN), ii, 824.

determination of, electrometrically, with alkalis (HOFFMAN and GORTNER), ii, 1011.

determination of, by the magnesium ammonium phosphate method (L. and J. DESHUSSES), ii, 67.

use of phenolphthalein as indicator for determination of (NYSENS), ii, 1201.

determination of, in vegetable ash (L. and J. DESHUSSES), ii, 67.

separation of, in analysis, by means of bismuth nitrate (KESCHAN), ii, 328.

separation of, from metals of the group (JÄRVINEN), ii, 602.

**Phosphoric acids**, absorption of ethylene by (MÜLLER), i, 1373.

**Phosphates**, absorption spectra of beads of (SCHAUM and FUNCK), ii, 178.

absorption of, by Pasteur-Chamberlain filters (PARKER), i, 1372.

action of sodium carbonate on (COLANI), ii, 1001.

effect of adrenaline and phloridzin on excretion of (ALLAN, DICKSON, and MARKOWITZ), i, 726.

removal of, in qualitative analysis (CURTMAN, MARGULIES, and PLECHNER), ii, 68.

determination of (LE GUYON and MAY), ii, 1202.

determination of, in blood (McCLUSKEY), i, 605.

determination of calcium and, in bone (v. EULER and JOHANSSON), i, 1489.

determination of, in presence of organic matter (SCHMITT-KRAHMER), i, 613.

**Phosphorus** :—

**Phosphates**, determination of, in serum (ESSINGER and GYÖRGY), i, 178.

**Orthophosphoric acid**, solubility and freezing point curves of (ROSS and JONES), ii, 971.

**Orthophosphates**, detection of metaphosphates, pyrophosphates, and (DE BOER), ii, 67.

**Hexametaphosphates**, preparation of (PASCAL), ii, 420.

**Phosphorus organic compounds** (NYLÉN), i, 1134.

**Phosphites**, neutral, preparation of (JANCZAK), i, 1051.

**Thiophosphorous acid**, aryl derivatives of (AUTENRIETH and MEYER), i, 807.

**Thiophosphoryl chloride**, aryl derivatives of (AUTENRIETH and MEYER), i, 807.

**Phosphorus determination** :—

determination of (RICHARDS and GODDEN), ii, 66; (STEWART and ARCHIBALD), ii, 824.

effect of ammonium sulphate on the determination of, colorimetrically (RIMINGTON), i, 183.

determination of, by means of lead amalgam (SOMEYA), ii, 1201.

determination of, in blood (MYRBÄCK), i, 1485.

lipoid, determination of, in blood and plasma (WHITEHORN), i, 95.

determination of, in proteins (SØRENSEN), ii, 900.

determination of, in presence of vanadium (GRAY and GARbutt), ii, 600.

**Photocatalysis** with neutral salts (BERGER), ii, 313.

**Photochemical equivalence**, law of (BERTHELOT), ii, 1022; (ALLMAND), ii, 1074; (DHAR and MUKERJI; WEIGERT and BRODMANN), ii, 1075.

reactions (DHAR and MUKERJI), ii, 1079.

Becquerel effect in (SCHAUM and SCHLEUSSNER), ii, 935.

importance of water and of intensity of light in (CHAPMAN), ii, 1078.

temperature-coefficients of (DHAR), ii, 135; (PADOA), ii, 415.

and thermal reactions (DHAR and MUKERJI), ii, 809.

mechanism of (BODENSTEIN), ii, 1075.

elementary processes of (FRANCK), ii, 1077.

quantum sensitivity in (WINTHER), ii, 1074.

- Photochemical reactions, relation between velocity of, and dielectric constants (WINTHER), ii, 1082.  
 formation of polar compounds in (NOYES), ii, 1081.  
 sensitisation (BERTHOUD), ii, 1083.  
 studies (REYCHLER), ii, 219, 1180; (NOYES), ii, 578.  
 thresholds and the dissociation theory (BOWEN), ii, 1074.
- Photochemistry, technique of (REEVE), ii, 234; (FRANKLIN, MADDISON, and REEVE), ii, 809.  
 quantum laws in (WARBURG), ii, 984.  
 periodic reactions in (PLOTNIKOV), ii, 883.  
 of complex compounds (SCHWARZ and WEISS), ii, 576.
- Photo-electric absorption coefficient (MILNE), ii, 920.  
 activity of elements (HAMER), ii, 7.  
 effect (AUDUBERT), ii, 43.  
 influence of temperature on (NIELSEN), ii, 172.  
 on metallic films (GROSS), ii, 344.
- Photo-electrons, direction of emission of (AUGER), ii, 730.
- Photographic blackening with Röntgen rays (BUSSÉ), ii, 1080.  
 developers (HORII and KOMORI), i, 1410.  
 fluorescence of (A. and L. LUMIÈRE and SEYEWETZ), i, 1060.  
 blackening curve for (MEIDINGER), ii, 143.  
 emulsions, ripening of (SCHMIDT), ii, 810; (LÜPPO-CRAMER), ii, 810, 986.  
 films, Röntgen ray measurements of (BLUNCK and KOCH), ii, 940; (KOCH and VOGLER), ii, 941.  
 image, latent (AUDUBERT), ii, 56; (TOY), ii, 143.  
 history and theory of (LÜPPO-CRAMER), ii, 575, 811.  
 plates, blackening of (ROBERTSON and THWAITES), ii, 575.  
 effect of coating, with fluorescent oils (HARRISON), ii, 930.  
 solarisation of (EDER), ii, 986.  
 for detection of mass rays (ASTON), ii, 706.  
 reversal (ARENS), ii, 313.
- Photography, gelatin in (SHEPPARD), ii, 966.  
 silver in (LÜPPO-CRAMER), ii, 935.  
 silver bromide grain in (BAKER; LÜPPO-CRAMER), ii, 574.
- Photolysis, mechanism of (BAUR), ii, 1082.
- Photometer, rotatory dispersion (GIBSON), ii, 934.
- Photometric studies (SCHAUM and FUNCK), ii, 178.
- Photosensitisation (TAYLOR), ii, 1078.
- Photosynthesis (MAZE), i, 485.  
 in tropical sunlight (DHAR and SAN-YAL), ii, 884.  
 activity of various radiations in (WURMSER), ii, 1082.
- Phototropism in solution (SINGH), ii, 195.
- Phthanites, hydrocarbons and carbonates in (DE LAPPARENT), ii, 821.
- Phthalaldehyde 1-oxime, derivatives of (GRIFFITHS and INGOLD), i, 1190.
- o*-Phthalaldehydic acid, refractivity of (SEEKLES), i, 31.
- Phthalamic acids, preparation of, and their conversion into anthranilic acids (CHAPMAN and STEPHEN), i, 1151.
- Phthalazine, 4-chloro-1-hydroxy-, and 1:4-dithio- (RADULESCU and GEORGESCU), i, 1186.
- Phthaleins, excretion of, in bile (ROSENTHAL and WHITE), i, 101.
- Phthalhydrazide, and its acetyl derivatives (RADULESCU and GEORGESCU), i, 1185.  
 derivatives of (HELLER, BUCHWALDT, FUCHS, KLEINIOKE, and KLOSS), i, 1324.
- Phthalic acid, salts, instability of, with hydrogen electrodes (DRAVES and TARTAR), ii, 695.  
 camphoryl hydrogen esters (FORSTER and SHUKLA), i, 1161.  
 hydroxylamine salt (OESPER and BALLARD), i, 1233.  
 ethyl ester, detection of (LEFFMANN and TRUMPER; LEVINSON; THOMS), ii, 1008.  
 detection of, in ethyl alcohol (RALEIGH and MARIE), ii, 605.  
 determination of (HANDY and HOYT), ii, 1210.  
 determination of, oxidimetrically (TÄUFEL and WAGNER), ii, 1008.
- Phthalic acid, 3-nitro-, preparation of (LITTMANN), i, 1066.  
 esters of, and their solubilities (NICOLET and SACKS), i, 1277.
- Phthalic anhydride, 3-nitro-, as a reagent for identification of (NICOLET and SACKS), i, 1277.
- Phthalidylidenedi-4-[salicylic phthalidylidene ether ester] dithioether (KAUFMANN and ROSSBACH), i, 1273.
- Phthalimide, mercury derivatives of (LYONS), i, 645.
- β*-Phthalimidodiethyl ether, *β*-chloro- (CRETCHER, KOCH, and PITTENGER), i, 628.
- Phthalobenzylamic acid (HOLMES and INGOLD), i, 1142.

- Phthalonitrile**, action of magnesium organic compounds on (WEISS and FREUND), i, 139.
- Phthalophenone derivatives**, structure of (DOMINIKIEWICZ), i, 53.
- Phthalylglycylglycine**, ethyl ester (GRÄNÄCHER), i, 594.
- Phthalyl-*p*-tolil**, nitration of (BRADY, QUICK, and WELLING), i, 1400.
- Phycocyanine** (KITASATO), i, 1111.
- Phycocerythrin** (KITASATO), i, 1111.
- Phylloerythrin** (FISCHER and HILMER), i, 855.
- Physics**, molecular (LASAREV), ii, 1134.
- Physical chemistry**, apparatus for (SCARPA), ii, 150.  
influence of Willard Gibbs on (CONNAN), ii, 395.  
constants in relation to metastability of matter (COHEN), ii, 1138.
- Physiological action and chemical constitution** (GILMAN and PICKENS), i, 333; (DUBIN, CORBITT, and FREEDMAN), i, 1502.  
fluids, dextrose in (LUNDGAARD and HOLBØLL), i, 1207.  
electrometric analysis of (MISLOWITZER and VOGT), i, 1485.
- Physostigmine**. See *Eserine*.
- Phytic acid**, and its barium salt (CON-TARDI), i, 277.
- Phytosterols** (VESTERBERG and BORGE), i, 252.
- Phytosterols**, irradiated, antirachitic value of (HESS, WEINSTOCK, and HELMAN), i, 750; (HESS and WEINSTOCK), i, 1020.
- Piaselenazonium salts** (BATTEGAY and VÉHOT), i, 1466.
- α*-Picoline**, 6-amino-, derivatives of (MEYER), i, 836.
- γ*-Picoline chlorostannate** (DRUCE), i, 1096.
- Picolinic acid**, derivatives of (MEYER), i, 836.
- Picric acid**, conductivity of, in methyl alcohol (GOLDSCHMIDT and AAR-FLOT), ii, 976.  
heat of fusion of (RINKENBACH and HALL), ii, 207.  
reduction of, in organs of the body (GIORGI), i, 733.  
detection of, colorimetrically (TORTI), ii, 905.  
determination of, in presence of nitro-compounds (DESVERGENES), ii, 607.
- Picrolonic acid**, preparation and properties of (HUGGOUNEQ, FLORENCE, and COTTURE), i, 435.
- Picromarin**, constitution of (BAKUNIN and GIORDANI), i, 691.
- Picrylbenzsynaldoxime** (BRADY and KLEIN), i, 674.
- Picrylcinnamsynaldoxime** (BRADY and KLEIN), i, 674.
- Picryl-*p*-dimethylaminobenzsynaldoxime** (BRADY and KLEIN), i, 674.
- Picryl-2:3-dimethylindole** (KORCZYŃSKI and KIERZEK), i, 1097.
- N*-Picryldi-*n*-propylcarbamide** (LECH-ER), i, 1391.
- Picrylmethoxybenzsynaldoximes** (BRADY and KLEIN), i, 674.
- Picryl-3:4-methylenedioxybenzsynaldoxime** (BRADY and KLEIN), i, 674.
- Picryl-2-methylindole** (KORCZYŃSKI and KIERZEK), i, 1097.
- Picrylnitrobenzsynaldoximes** (BRADY and KLEIN), i, 674.
- Picryl-4-picryloxy-3-methoxybenzsynaldoxime** (BRADY and KLEIN), i, 674.
- Picrylsemicarbazide** (GIUA and PETRONIO), i, 1397.
- Picrylsemioxamzide** (GIUA and PETRONIO), i, 1397.
- Piezoechemical studies** (COHEN, DE MEESTER, and MOESVELD), ii, 190; (COHEN and BRUINS), ii, 280; (COHEN and VAN DER BOSCH), ii, 283.
- Pigs**, effect of iodine on assimilation of nitrogen, phosphorus, and calcium in (KELLY), i, 1210.
- Pigeons**, digestion in (MANGOLD), i, 615.
- Pigments**, formation of (SCHMALFUSS and WERNER), i, 1361.  
by fungi (DANILOV), i, 1013.  
metabolism of. See *Metabolism*.
- Pilocarpidine**, constitution of (BURTLES, PYMAN, and ROYLANCE), i, 696.  
constitution and derivatives of (SPÄTH and KUNZ), i, 575.
- iso*Pilocarpidine nitrate** (SPÄTH and KUNZ), i, 576.
- Pilocarpine 2:4:6-trinitro-*m*-tolylxide** (SPÄTH and KUNZ), i, 576.
- iso*Pilocarpine methopicate** (SPÄTH and KUNZ), i, 576.
- n*- and *iso*-Pilocarpines**, and their derivatives (LANGENBECK), i, 151.
- n*- and *iso-neo*Pilocarpines**, and their salts (BURTLES, PYMAN, and ROYLANCE), i, 696.
- Pimenta officinalis***, oil from leaves of (KEMP), i, 565.
- Pinacolin**, decomposition of (HURD and TALLYN), i, 885.
- Pinacolin**, chloro-oximino-, and its benzoyl derivative (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132.
- Pinacene**, compound of boric acid and (HERMANS), i, 501.
- Pinane** (LIPP), i, 1080.
- Pine lignin**. See *Lignin*.

- Pineapples, non-volatile acids of (NELSON), i, 762.  
 nitrogen assimilation of (STEWART, THOMAS, and HORNER), i, 1866.  
 Pinene (KONDAKOV and SAPRIKIN), i, 1080.  
 oxide, hydration of (NAMETKIN and JARCEVA), i, 1081.  
 $\alpha$ -Pinene, catalytic hydrogenation of (ZELINSKI), i, 821.  
 action of chlorine on (BRUS), i, 821.  
 Pinenes, relation between terpineols and (DÉLÉPINE), i, 564.  
*Pinus longifolia*, abietic acid from rosin of (RAO and SIMONSEN), i, 687.  
 Piperazine, compounds of, with amino-acids (ABDERHALDEN and ROSSNER), i, 975.  
 1:4-dichloroacetyl derivative (ABDERHALDEN and ROSSNER), i, 976.  
 hydroferricyanide (CUMMING), i, 122.  
 Piperidine, preparation of (MARIE and LEFEUNE), i, 577.  
 influence of, in rickets (ÉDERER), i, 869.  
 chlorostannate (DRUCE), i, 1096.  
 hydroferricyanide (CUMMING), i, 122.  
 Piperidinoacetic acid, phenyl ethyl ester, and its hydrochloride (WEIL), i, 157.  
 9-Piperidinoanthracene (BARNETT, COOK, and MATTHEWS), i, 648.

 $\alpha$ -Piperidino- $\beta$ -benzylbutan- $\gamma$ -one, and its hydrochloride (MANNICH), i, 375.  
 Piperidinodiphenylmethane, and its hydrochloride (CHRISTIAEN), i, 23.  
 $\beta$ -*N*-Piperidinoethyl phenyl ether, and its hydrobromide and hydrochloride (BRILL), i, 833.  
 $\alpha$ -Piperidino- $\beta$ -ethylbutan- $\gamma$ -one, and its hydrochloride (MANNICH), i, 375.  
*N*-Piperidinoethyloleamide (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1133.  
 2-Piperidinohydroindene, 1-oximino- (STRAUS and EKARD), i, 1139.  
 Piperidino-1-ketotetrahydronaphthalene (STRAUS, BERNOULLY, and MAUTNER), i, 1155.  
 Piperidinomethylallylmalonie acid (MANNICH and SUTTER), i, 1037.  
 $\alpha$ -Piperidinomethyl- $\gamma$ -valerolactone, and  $\delta$ -bromo-, and their derivatives (MANNICH and SUTTER), i, 1038.  
 Piperidinophenylbenzylmethane, and its hydrochloride (CHRISTIAEN), i, 23.  
 $\alpha$ -Piperidino- $\alpha$ -phenyl- $n$ -propane, and its hydrochloride (CHRISTIAEN), 23.  
 $\gamma$ -*N*-Piperidinopropyl benzoate, and phenyl ether and their salts (BRILL), i, 833.  
 2-Piperidinotetrahydronaphthalene, 1-oximino- (STRAUS and EKARD), i, 1139.  
 $\alpha$ -Piperitol (SIMONSEN), i, 1165.  
 Piperonal, preparation of (BRINER, v. TSCHARNER, and PAILLARD), i, 1069.  
 determination of (RADCLIFFE and SHARPLES), ii, 1210.  
 Piperonaldoxime *N*-phenyl ether (BAMBERGER), i, 142.  
 Piperonyl bromide, preparation of (CHEMISCHE FABRIK FLORA), i, 1413.  
 Piperonyl compounds, carbon-like residue from heating (PASCAL), i, 1278.  
 $\alpha$ -Piperonylideneacetohezoic acid (RYAN and SHANNON), i, 558.  
 Piperonylidenemethyl amyl ketone, and its derivatives (RYAN and SHANNON), i, 558.  
 Piperonylidenemethyl ethyl ketone (RYAN and CAHILL), i, 558.  
 Piperonylideneoxindole, 6'-amino-, and its methosulphate (ARMIT and ROBINSON), i, 1172.  
 2-Piperonylidene-4-phenyl-3-anisyl-5-methyl- $\Delta^2$ -cyclopenten-1-one (RYAN and LENNON), i, 1282.  
 Piperonylidene- $\gamma$ -piperonylpropylamine (BAKER and ROBINSON), i, 925.  
 3 Piperonyl-4-phenyl-5-methyl- $\Delta^2$ -cyclopenten-1-one (RYAN and LENNON), i, 1282.  
 $\beta$ -Piperonylpropionic acid, 6-nitro- (BAKER and ROBINSON), i, 925.  
 $\beta$ -Piperonylpropionitrile, and 6-nitro- (BAKER and ROBINSON), i, 925.  
 $\gamma$ -Piperonylpropylamine, and its derivatives (BAKER and ROBINSON), i, 925.  
 $\gamma$ -Piperonylpropyltrimethylammonium iodide (BAKER and ROBINSON), i, 925.  
 Piperonylsuccinic anhydride (BAKER and LAPWORTH), i, 671.  
 Pipette, Cornec-Cottet, for measurement of small volumes (NICLOUX), ii, 898.  
*Pistacia terebintus*, oil from (TIMOSUFF), i, 1124.  
 Pituitary extracts, dialysis of, and their quantitative effect on secretion of urine (SMITH and McCLOSKEY), i, 207.  
 Placenta, transmission of blood constituents through the (PLASS and MATTHEW), i, 1489.  
 Planck's law, deduction of (EDDINGTON), ii, 1922.

- Plants, photosynthesis by (MAZE), i, 485.  
 absorption of ultra-violet light by (PALLADIN and HÜBENET), i, 1223.  
 absorption of salts by (LUNDEGÅRDH and MORÁVEK), i, 214.  
 absorption of mineral salts by (DUSTMAN), i, 1123.  
 absorption of potassium by (ANDRÉ and DEMOUSSY), i, 758.  
 anaerobic respiration in (NEUBERG and GOTTSCHALK), i, 213.  
 effect of wounding on respiration of (PALLADIN), i, 1221.  
 apparatus for study of the respiration of (GINSBURG), i, 1120.  
 influence of end-products of metabolism on (SIGMUND), i, 344.  
 occurrence of aromatic compounds in (RETI), i, 418.  
 influence of external factors on the ash-content of (SEIDEN), i, 1518.  
 relation between yield of, and the intensity of external factors (BRIGGS), i, 1222.  
 suitable depth in soil for (LEMMERMANN, WIESSMANN, and ECKL), i, 1029.  
 equilibria of nutrition in (RIPPPEL and LUDWIG), i, 485.  
 effect of bases on growth of seedling (BOKORNY), i, 489.  
 effect of, on reaction of culture solutions (HOAGLAND), i, 1368.  
 acidity of the sap of (ARLAND), i, 213.  
 cuticle of (LEGG and WHEELER), i, 1025.  
 formation of asparagine in (PRIANISCHNIKOV), i, 213.  
 formation of carbohydrates in, from proteins and fats (TERROINE, TRAUTMANN, and BONNET), i, 755.  
 carbon dioxide as a climatic factor in growth of (REINAU), i, 213.  
 effect of carbon dioxide in soil air on growth of (PARKER), i, 1223.  
 effect of dicyanodiamide on (ALLISON, SKINNER, and REID), i, 1030.  
 oxidation by enzymes of (ONSLow and ROBINSON), i, 1010.  
 specificity of enzymes of (BLAGOVESCHENSKI and SOSSIEDOV), i, 1007; (BLAGOVESCHENSKI and BIELOZERSKI), i, 1009.  
 glyceronic acid in (PALLADIN and LEVTSCHENKO), i, 1869.  
 stimulation of, by hydrogen cyanide (GLASSNER), i, 1029.  
 inorganic substances of (SCHMIDT and MALYON), i, 213; (SCHMIDT, HAAS, and SPERLING), i, 1870.  
 Plants, laevulosans in (COLIN), i, 618.  
 occurrence of metals in (MCHARGUE), i, 1023.  
 mineral constituents in (SMIRNOV), i, 486.  
 nitrates in, in relation to nitrogen nutrition (NIKLAS and VOGEL), i, 213.  
 utilisation of ammonium nitrate by (PRIANISCHNIKOV), i, 757.  
 action of nitrites on growth of (FEHER and VAGI), i, 488.  
 decomposition of oxalic acid by (PALLADIN and LOVTSCHINOVSKAJA), i, 1222.  
 pectic substances in (NORRIS and SCHREYER), i, 1226.  
 pentoses in (ENGLIS and HALE), i, 618.  
 effect of phosphate manuring on vitamin-B in (HORNEMANN), i, 623.  
 phosphatides of (LEVENE and ROLF), i, 487; (GRAFE; GRAFE and HORVAT), i, 1522.  
 availability of potassium silicates to (DOBRESOU-CLUY), i, 1223.  
 silica in growth of, and its relation to phosphoric acid (NANJI and SHAW), i, 214.  
 influence of silica and silicates on growth of (LEMMERMANN, WIESSMANN, and SAMMET), i, 766; (DUCHON; LEMMERMAN; DENSOCH), i, 767.  
 action of sodium carbonate on germination and growth of (FEHER and VAGER), i, 1023.  
 action of soil solutions on development of roots of (TERLIKOWSKI), i, 1029.  
 formation of starch from arabinose by (POLONOVSKI and MORVILLE), i, 1222.  
 effect of desiccation on sugar content of (LINK), i, 618.  
 tyrosinase in (BOAS and MERKENSCHLAGER), i, 474.  
 formation of vegetable oils in (FRANCESCONI, MANFREDI, and ASTENGO), i, 759.  
 zymase in (PALLADIN and ILLJUVIEV), i, 1519.  
 diseases of (ANDERSON), i, 1522.  
 green, poisonous action of carbon monoxide on (WEHMER), i, 1029.  
 higher, sources of available nitrogen for (BIALOSUKNIA), i, 1866.  
 effect of urea, thiourea, and allylthiourea on (E. and G. NICOLAS), i, 757.  
 chemistry of (KOMATSU and UEDA), i, 762; (KOMATSU and YAMADA), i, 881; (KOMATSU and NODZU), i, 1025; (KOMATSU and TANAKA), i, 1869.

- Plants, lower, effect of oxygen on energy balance of (TERROINE, BONNET, and HEE), i, 1517.  
 medicinal, constituents of (ZELLNER), i, 763.  
 South African, active principles of (JURITZ), i, 761.  
 young, influence of light on absorption of nutrients by (WIESSMANN), i, 757.  
 detection of phenols in (WARE), i, 1122.  
 determination of camphor in (GORI), ii, 1009.  
 determination of chlorides and sulphates in sap of (GORTNER and HOFFMAN), i, 485.  
 determination of nitrate nitrogen in (BURRELL and PHILLIPS), i, 1367.  
 Plant ash, physico-chemical analysis of (L. and J. DESHUSSES), ii, 67.  
 Plant cells, equilibrium and oxidation in (MAYER and PLANTEFOL), i, 1120.  
 staining of, with colouring matters (SCHWARZ), i, 755.  
 effect of poisons on (ARZICHOVSKI and SOHELJAKIN), i, 1227.  
 Plant extracts, blood-sugar depressant action of (GLASER and WITTNER), i, 209.  
 Plant fibres, Röntgen ray patterns from (SPONSLER), ii, 844.  
 Plant juices, hydrogen-ion concentration of (GUSTAFSON), i, 1023.  
 Plant plasma, influence of alkaline earth salts on the heat coagulation of (KAHO), i, 217.  
 Plant roots, exposed to light, development and distribution of chlorophyll in (POWELL), i, 1221.  
 Plant tissues, distribution of potassium in (DOWDING), i, 871.  
 laboratory apparatus for wet grinding of (BOACH), i, 1517.  
 Plaster, hard, preparation of (CHASSEVENT), ii, 559.  
 Plasticity (SHEPPARD; BOGUE; SHEPPARD and CARVER; VENABLE), ii, 1058.  
 Plastids, amylogenic activity of (MAIGE), i, 486.  
 Platinum, spark spectrum of (L. and E. BLOCH), ii, 829.  
 photo-electric effect and conductivity of (HERRMANN), ii, 947.  
 photo-electric sensitivity of (SUHRMANN), ii, 831.  
 valency of, in respect to mercaptans (P. C. and K. C. B. RAY), ii, 1121.  
 melting point of (HOFMANN), ii, 99.  
 Platinum, adsorption of metals by (MAXTED), ii, 384.  
 adsorption of water on (McHAFFIE and LENHER), ii, 854.  
 effect of Röntgen rays on the catalytic activity of (CLARK, McGRATH, and JOHNSON), ii, 1176.  
 physical state and catalytic action of (SMITH; GAUGER), ii, 1072.  
 catalytic hydrogenation with (BODENSTEIN), ii, 216; (WALDSCHMIDT-LEITZ and SEITZ), ii, 411.  
 behaviour of, with fused silicates (JANDER), ii, 416.  
 colloidal, nuclear hydrogenation with (SKITA), i, 140.  
 oxide-coated, emission of negative ions from (BARTON), ii, 1020.  
 thermionic work function of (DAVISSON and GERMER), ii, 81.  
 sols, cataphoresis of, in presence of caoutchouc (EVERS), ii, 668.  
 Platinum alloys, reaction limits of (TAMMANN), ii, 878.  
 Platinum salts, trypanocidal action of (LEVADITI, GIRARD, and NICOLAU), i, 1117.  
 Platinum oxide, catalytic reduction with (KERN, SHRINER, and ADAMS), i, 625; (PIERCE and ADAMS), i, 824; (HECKEL and ADAMS), i, 909; (CAROTHERS and ADAMS), ii, 693.  
 Platinic chloride, compounds of ethyl sulphide and (P. C. and K. C. B. RAY), ii, 1121.  
 selenide (MOSER and ATYNSKI), ii, 584.  
 telluride (BRUKL), ii, 895.  
 Chloroplatinic acid, compounds of acid amides with (FRICKE and RUSCHHAUPT), ii, 894.  
 Platinum organic compounds:—  
 Platinum, hydrazine carbilamine compounds of (TSCHUGAEV, SKANAVY-GRIGORJEVA and POSNJAK), i, 1395.  
 dimethylglyoxime (COOPER), ii, 827.  
 Platinocyanides, optical properties of crystals of (POCHETTINO), ii, 21.  
 Platinum separation:—  
 separation of palladium from (KRAUSS and DENEKE), ii, 1005.  
 separation of ruthenium and (RUFF and VIDIC), ii, 443.  
 Platinum black, structure of (OSAWA), ii, 747.  
 preparation and activation of (KAB), ii, 564.  
 catalytic hydrogenation with (WASER), i, 584.  
 effect of chlorine on catalysis by (BOSWELL and BAYLEY), ii, 215.

Platinum electrodes. See Electrodes.

Platinum films, velocity of photo-electrons emitted from (CHA), ii, 476.

electrical resistance of, in presence of hydrogen (GAUGER), ii, 1040.

sputtered, effect of gas on the resistance of (REYNOLDS), ii, 108.

Platinum wedges for spectrophotometry (MERTON), ii, 78.

Platinum wire, effect of absorption of gas on resistance of (KLEINE), ii, 947.

Plum, wild. See *Ximenia americana*.

*Pneumococcus*, oxidation and reduction by (NEILL and AVERY), i, 340, 867; (NEILL), i, 868.

Pneumonia, excretion of organic acids after (CLAUSEN), i, 1491.

Poison, rattlesnake, fractionation of the proteins of (WELKER), i, 998.

Poisons, adsorption of, by charcoal (DINGEMANSE and LAQUEUR), i, 1500.

adsorption of, by a new plant charcoal (LAQUEUR and SLUYTERS), i, 736.

effect of, on plant cells (ARZICHOVSKI and SCHELJAKIN), i, 1227.

convulsive, influence of acids and alkalis on the action of (FRÖHLICH and SOLÉ), i, 334.

use of hydrogen peroxide in analysis of (MAGNIN), ii, 594.

Poisoning, carbon monoxide, spectrochemistry of (BALTHAZARD), i, 196.

Polar compounds, formation of, in photochemical reactions (NOYER), ii, 1081.

Polarisation (GLASSTONE), ii, 43, 133; (HOLLER), ii, 793.

and electrical double layers (CLARK), ii, 673.

effect of alternating currents on (GLASSTONE; ISCARISCHEV and BERKMANN), ii, 548.

of metallic electrodes (DRESBACH and HOSMER), ii, 1068.

anodic, oxygen evolution theory of (JIRSA and LORIS; JIRSA), ii, 45.

dielectric (EBERT), ii, 14.

rotatory, theory of (DE MALLEMANN), ii, 1029.

Polarity and optical activity of substituent groups (RULE and SMITH), ii, 1120.

induced alternate (LAPWORTH), ii, 636.

Polarograph (HEYROVSKÝ and SHIKATA), ii, 674.

Potassium,  $\alpha$ -particles from (CURIE), ii, 348, 834.

ionisation due to  $\alpha$ -particles from (BLAND), ii, 348.

Polonium, distribution of length of  $\alpha$ -particles of, in oxygen and nitrogen (CURIE and YAMADA), ii, 175.

long-range particles from (YAMADA), ii, 255; (CURIE and YAMADA), ii, 621.

adsorption of, by various substances (BRENNEN), ii, 770.

growth of, in radium preparations (CURIE and YOVANOVITCH), ii, 464.

Polydihydrodicyclopentadiene ozonide (STAUDINGER), i, 898.

Polydicyclopentadiene diozonide (STAUDINGER), i, 898.

Polymerides, magnetochemistry of (PASCAL), ii, 371.

Polymerisation (LEBEDEV and FILO-NENKO), i, 225; (STAUDINGER and LÜTHY), i, 360, 361; (STAUDINGER), i, 362.

by means of aluminium oxide and iron (IPATIEV and KIJUKVIN), i, 226.

Polymethine colouring matters, preparation of (FARBENFABRIKEN VORM F. BAYER & Co.), i, 839.

Polymorphism, aggregation and (SCHAUM, NAUMANN, UNGER, and HOF-FARTH), ii, 1132.

and isomerism (PREIFFER, KALOK-BRENNER, and BEHR), i, 547.

Polyoxymethylenes, constitution of (STAUDINGER and LÜTHY), i, 360; (STAUDINGER), i, 362.

Polypeptides, oxidation of (ABDER-HALDEN and KOMM), i, 848.

cleavage of, by yeast enzymes (FODOR and EPSTEIN), i, 1214; (FODOR, BERNFELD, and SCHÖNFELD), i, 1215.

Polysaccharides (KARRER, SCHNIDER, and SMIRNOV), i, 418; (KARRER and ILLING), i, 741, 1029; (KOMATSU and UEDA), i, 762; (KARRER and LIER), i, 793; (KARRER and JOOS), i, 1028.

synthesis of (SCHLUBACH and MAURER; SCHLUBACH and RAUCHENBERGER), i, 888.

methylation of (SCHMID), i, 1386.

ethers of (WELTZIEN), i, 12; (HERZOG), i, 371.

*Polystictus versicolor*, attack of apples by (SMITH), i, 1226.

Polysulphides. See under Sulphur.

Polythionates. See under Sulphur.

Porcelain, action of metals and gases on vessels of (v. WARTENBERG), ii, 699.

Porphyrin, formation of, from hæmoglobin (SCHUMM), i, 83.

of faeces (PAPENDIECK), i, 98; (KEMMER), i, 188.

- Porphyryns**, natural (FISCHER and HILGER), i, 307; (KÜSTER and HUTTENLOCHER), i, 845; (FISCHER and MÜLLER), i, 845, 846; (SCHUMM), i, 846; (FISCHER and LINDNER), i, 992, 997.  
 in blood serum (PAPENDIECK), i, 96.  
 in yeast (FISCHER and FINK), i, 866.  
*Potamogeton*, leaf pigments of (PRÁT), i, 487.
- Potash-oligoclase** from Mt. Erebus (MOUNTAIN), ii, 819.
- Potassamide**, reactions of, with cobalt and iron salts in liquid ammonia (BERGSTROM), ii, 231.
- Potassium**, molecular weight of (JOUNIAUX), ii, 187.
- Potassium**, spectrum of, at low voltage (NEWMAN), ii, 1014.  
 spectrum of, burning in chlorine (RAMDAS), ii, 334.  
 absorption spectrum of (SUR and GHOSH), ii, 453.  
 absorption and emission spectra of (NARAYAN and GUNNAIYA; NARAYAN and SUBRAHMANYAM), ii, 737.  
 band spectrum of, and of mixtures of the vapours with sodium vapour (SMITH), ii, 86.  
 Röntgen ray spectrum of (LUNDQUIST), ii, 1014.  
 spark spectrum of (DAHMEN; DE BRUIN and ZEEMAN), ii, 167.  
 photo-electric effect of (HORNBECK), ii, 81; (LAWRENCE), ii, 831.  
 ionisation of the vapour of, by light (SAMUEL), ii, 459; (ARNULF), ii, 460.  
 vapour, low voltage arcs in (NEWMAN), ii, 450.  
 radioactivity of (HARKINS and GUY), ii, 1109.  
 as a trap for mercury vapour (HUGHES and POINDEXTER), ii, 895.
- Potassium alloys** with mercury, electrolysis of (KREMMANN, MÜLLER, and ORTNER), ii, 182.  
 effect of light on the action of water with (BHATNAGAR, PRASAD, and MUKERJI), ii, 811.  
 interfacial tension between benzene and (BHATNAGAR, PRASAD, and MUKERJI), ii, 194.  
 with sodium, electrolysis of (KREMMANN and v. REHENBURG), ii, 182.
- Potassium salts**, distribution of, in plant tissues (DOWDING), i, 871.  
 adsorption of, by plants (ANDRÉ and DEMOUSSY), i, 758.  
 in soils, effect of fertilisers and cropping on (AMES and SIMON; FRAPS), i, 1523.
- Potassium bromate**, electrolytic preparation of (EWING and SCHMIDT), ii, 551.  
 bromide, reflection of Röntgen rays by crystals of (KULENKAMPFF), ii, 1038.  
 bromide and chloride, mixed crystals of (BROOMS), ii, 366.  
 Röntgen ray analysis of solid solutions of (SASAHARA), ii, 745.  
 bromide or iodide, action of chlorine on, in presence of water (PARSONS), ii, 880.  
 sodium carbonates (BAIN), ii, 577.  
 chlorate, effect of, on blood, and its excretion (ROSS), i, 732.  
 chloride, dispersion of (HERZFELD and WOLFF), ii, 1119.  
 electrical conductivity of solutions of (LORENZ and VOIGT), ii, 871.  
 activity coefficient of (SCATCHARD), ii, 397.  
 liquid junction potential between hydrochloric acid and (SCATCHARD), ii, 398.  
 transference numbers of, and its mixtures with sodium chloride (MACINNES), ii, 872; (DEWEY), ii, 873.  
 density of aqueous solutions of (H. C. and E. W. PARKER), ii, 288.  
 equilibrium of ammonium and mercuric chlorides, water, and (OSAKA and ANDO), ii, 123.  
 reaction between sodium dichromate and (ROBERTSON), ii, 121.  
 chromate, equilibrium of ammonium chromate, water, and (ARAKI), ii, 786.  
 dichromate, melting and transition points of (ROBINSON, STEPHENSON, and BRISCOE), ii, 374.  
 depolarising action of (VINCENT), ii, 882.  
 lanthanum chromates (CAROBBI), ii, 315.  
 hydroxide, activity coefficient of (SCATCHARD), ii, 397; (HARNED), ii, 398.  
 iodide, action of light on, in presence of potassium dichromate and eosin (REYCHLER), ii, 1180.  
 electrical conductivity of bromine-iodine solutions of (PLOTNIKOV), ii, 791.  
 absorption of, by the skin (CANALS and GIDON), i, 1116.  
 iodide and persulphate, reaction between, in gelatin sols (RAWLING and GLASSETT), ii, 561.  
 permanganate, ultra-violet absorption spectrum of (VITERBI), ii, 352.

- Potassium permanganate**, oxidation of hydrogen by (WILKE and KUHN), ii, 51.  
 decomposition of solutions of (HOL-LUTA), ii, 422.  
 titration of, with hydrogen peroxide in presence of ammonium sulphate (TANANAEV), ii, 430.  
 standardisation of, with sodium oxalate (DEL FRESNO), ii, 602, 904.  
 ammonomolybdate and ammonotungstate (BERGSTROM), ii, 1084.  
 dihydrogen phosphate, crystal structure of (HASSEL), ii, 1130.  
 chlororuthenates (BRIGGS), ii, 703.  
 chlororuthenites (CHARONNAT), ii, 586.  
 pentachlororuthenite and hexachlororuthenate (AOYAMA), ii, 816.  
 pentachlororuthenites (GUTBIER and NIEMANN), ii, 231.  
 silicates, assimilation of, by plants (DOBRESOU-CLUY), i, 1223.  
 chromosilicate, synthesis of (KARFIOL), ii, 1087.  
 lanthanum sulphates (ZAMBONINI and CARORBI), ii, 222.  
 lithium sulphate, crystal structure of (BRADLEY), ii, 638.  
 neodymium sulphates (ZAMBONINI and CAGLIOTTI), ii, 222, 315.  
 pentasulphide, action of allyl iodide on (THOMAS and RIDING), i, 4.  
 sulphite (FORSTER, BROSCHE, and NORBERG-SCHULZ), ii, 120.  
 pyrosulphite, absorption spectrum of (DIETZEL and GALANOS), ii, 1115.  
 dinitrosulphonate (*nitrososulphite*) (RASCHIG), ii, 226.  
 chloroiminodisulphonate (RASCHIG), ii, 986.  
 tantalate, diffusion and molecular weight of (JANDER and SCHULZ), ii, 528.  
 tungstate, equilibria of, with lithium tungstate and tungsten trioxide (VAN LIEMPT), ii, 421.
- Potassium organic compounds** :—  
 Potassium . ferritripyrocatecholoxide, use of, as an indicator (BINDER), ii, 596.
- Potassium detection, determination, and separation** :—  
 substitute for blue glass in detection of (MEYER), ii, 601.  
 distinction between sodium and, by means of ammonium oxalate (MEYER), ii, 1202.  
 determination of (VÜRTHHEIM), ii, 427; (MEYER), ii, 825; (YOE), ii, 902.
- Potassium detection, determination, and separation** :—  
 determination of, polarimetrically (WRÓBEL), ii, 240.  
 determination of, in blood serum (LEBERMANN), i, 96, 714.  
 determination of, in urine (v. DEHN), i, 855.  
 determination and separation of (SMITH and ROSS), ii, 601.
- Potatoes**, composition of (WILLAMAN and WEST), i, 1522.  
 respiration and carbohydrate changes in, at low temperatures (HOPKINS), i, 344.  
 cork layer of the skin of (RHODES), i, 1026.
- Potato plants**, growth of, in nutrient solutions (JOHNSON), i, 1367.
- Potential**, effect of presence of porous materials on measurements of (FRICKE), ii, 544.  
 relation between energy of escape of electrons and (GÜNTHER-SCHULZE), ii, 477.  
 effect of filtration on (RIEY), ii, 796.  
 at surfaces of inorganic liquids (WESSEL), ii, 795.  
 fall of, in liquids, produced by air bubbles (KLEEMAN and PITTS), ii, 659.  
 differences of, between liquids and air (FRUMKIN), ii, 544.  
 differences of, at the junction of two liquids (VOSNESSENSKI), ii, 873.  
 differences of, at the boundary of two phases (REICHNSTEIN), ii, 545.  
 electronegative series of, in liquid ammonia (BERGSTROM), ii, 794.  
 contact, of metals (DOWLING), ii, 796.  
 decomposition, of non-aqueous solutions (FINKELSTEIN), ii, 546.  
 of electrodes (HOLLER), ii, 793.  
 of metals against pure water (SMITS, GERDING, and KROON), ii, 795.  
 single-phase boundary, measurement of (BAUR), ii, 1164.  
 spark, Townsend theory of (DÄLLENBACH), ii, 740.
- Potential scales**, comparison of electrode potentials and (BROCHER), ii, 711.
- Potentiometer**, new (MISLOWITZER), i, 1485.
- Praseodymium**, preparation and properties of (WIERDA and KREMERS), ii, 993.  
 Röntgen ray spectrum of (GLEDITSCH and BOTOLFSSEN), ii, 612.
- Praseodymium chlorovanadinite** (CARORBI), ii, 582.
- Precipitates**, stratified structure of (v. WEINARN), ii, 959.

- Precipitates, adsorption by (WEISER), ii, 108.  
emanating capacity of, and surface variation (HAHN), ii, 177.  
ignition of (BRINTON and STOPPEL), ii, 72.
- Precipitation, laws of (v. WEIMARN), ii, 1064.  
of coloured salts in gels (RIEDEL and WIDGOTT), ii, 863.  
fractional (RUFF and HIRSCH), ii, 992.  
rhythmic, in gels (FISCHER), ii, 853.  
in gelatin gels (SCOTT-BLAIR), ii, 519.
- Precipitin, behaviour of, when adsorbed, to its antigen (EISLER), i, 96.
- Pregnancy, toxæmia of (STANDER, DUNCAN, and SISSON), i, 1492.  
storage of vitamin-A in white rats during (SCHUBERT and CANDELIN), i, 1515.
- Pressure, internal, in terms of critical pressure and temperature (SCHUSTER), ii, 951.  
and molecular volume (SCHUSTER), ii, 1142.
- Pressure equaliser (PATTERSON), ii, 151.
- Primeverase, from almond emulsin (BRIDEL), i, 1438.
- Primeverose (BRIDEL), i, 836, 615, 760.
- Primeverosidase (BRIDEL), i, 760, 1438.
- Primula*, unpleasant taste of roots of (KOFER and BRAUNER), i, 1224.
- Privet berries, colouring matter of (PFAU), i, 572.
- Proflavine, effect of, on infusoria (ROBERTSON), i, 1012.
- Prolamines (HOFFMAN and GORTNER), i, 1479.
- Propane,  $\alpha\beta\gamma$ -tri-amino-, and its derivatives and complex metallic compounds (MANN and POPE), i, 873.
- l*-Propane,  $\alpha$ -amino- $\beta$ -hydroxy-, and its salts (KARRER and KLARER), i, 1036.  
 $\alpha\beta$ -dihydroxy-, preparation of (LEVENE and HALLER), i, 1375.
- cyclo*Propane compounds, influence of phenyl groups on the formation of (HAERDI and THORPE), i, 923.
- cyclo*Propane series, three-carbon tautomerism in (GOSS, INGOLD, and THORPE), i, 549.
- cyclo*Propanebis-2.6-diketophenyl*cyclo*hexanedispiran (RADULESCU and GEORGESCU), i, 820.
- cyclo*Propanedicarboxylic acid, derivatives of (KÜSTER and GRÄSSNER), i, 922.
- 2-Propenyl-3-*o*-anisolesulphonyl-2-methylquinoline (TRÖGER and BROHM), i, 1453.
- Propepsin in blood and urine (GOTTLIEB), i, 742.
- Propinene, synthesis from (YVON), i, 514.
- Propiolic acid, methyl ester (INGOLD), i, 779.
- l*-Propionamide,  $\alpha$ -amino-, *p*-toluenesulphonate (FREUDENBERG and HUBER), i, 229.
- Propionic acid, partition of, between water and ethyl ether (DE KOLOSOVSKI), ii, 506.  
hydroxylamine salt (OESPER and BALLARD), i, 1233.  
alkoxymethyl esters (FARREN, FIFE, CLARK, and GARLAND), i, 1230.  
furfuryl ester (ZANETTI), i, 567.
- Propionic acid,  $\alpha$ -bromonitro-,  $\alpha$ -chloronitro-, and  $\alpha$ -nitro-, ethyl esters, and hydrazine derivative of the latter (MACBETH and TRAILL), i, 629.  
 $\beta$ -chloro-, preparation of (POWELL), i, 228.
- d*-Propionic acid,  $\alpha$ -thiol-, sodium salts (LEVENE and MIKESKA), i, 512.
- Propionitrile,  $\beta$ -chloro-, reaction of resorcinol with (CHAPMAN and STEPHEN), i, 669.  
 $\beta$ -nitro- $\alpha$ -oximino-, and its derivatives (WIELAND), i, 1049.
- 3-Propionylbornylene. See  $\alpha$ -Bornylene ethyl ketone.
- 3-Propionylcamphane. See  $\alpha$ -Camphanylethyl ketone.
- Propionylcarbazole, and its picrate, and nitro- (ODDO), i, 296.
- 5-Propionyl-5:10-dihydrophenarsazine, 10-chloro- (BURTON and GIBSON), i, 85.
- 3-Propionylphenylarsinic acid, 4-hydroxy-, *p*-nitrophenylhydrazones (MARGULIES), i, 447.
- 2-Propionylpyrrole, 3:4-*di*- and 3:4:5-*tri*-iodo- (TERENTIEV and TSCHELINCEV), i, 295.
- Propionylveratrole,  $\beta$ -chloro- (FREUDENBERG and FIKENTSCHER), i, 69.
- $\beta$ -Propoxybenzoic acids, *p*-bromo-, *p*-chloro-, *p*-iodo-, and *p*-hydroxy-, and their derivatives (FARBWERKE VOEM. MEISTER, LUCIUS, & BRÜNING), i, 1424.
- 2-Propoxy- $\Delta^1$ -*cyclo*hexene, 1-cyano- (v. AUWERS, BAHR, and FRESSE), i, 312.
- iso*Propoxy-5-methylacetophenone, and its derivatives (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.

- Propyl alcohol,  $\beta$ -chloro-, conversion of, into  $\beta$ -hydroxybutyronitrile (DEW-AEL), i, 14.
- iso*Propyl alcohol, latent and specific heats of (PARKS and KELLEY), ii, 949.
- properties of mixtures of ethyl alcohol and (PARKS and KELLEY), ii, 764.
- l*-*iso*Propyl alcohol, *aa*-dichloro-, urethane of (SEN), i, 337.
- n*- and *iso*-Propyl alcohols, refractive indices of (BENNETT and GARRATT), i, 498.
- l*-Propylallylbarbituric acid (VOLWILER), i, 1174.
- l*-Propylamine,  $\beta$ -hydroxy-, hydrochloride (LEVENE and HALLER), i, 1375.
- Propylammonium chloroferrates (REMY and ROTHE), ii, 1089.
- n*-Propylaniline *m*-nitrobenzenesulphonamide (MARVEL, KINGSBURY, and SMITH), i, 245.
- n*-Propylbenzene, 3:5-dihydroxy- (MAUTHNER), i, 25.
- $\gamma$ -Propylbenzoic acid, *o*-amino-, and the corresponding lactam (v. BRAUN and REICH), i, 1407.
- n*-Propylbenzoyloximidocarbonic acid, ethyl ester (OESPER and COOK), i, 523.
- $\gamma$ -Propylbenzyl bromide, *o*-bromo- (v. BRAUN and KAISER), i, 1414.
- iso*Propyl- $\beta$ -bromoallylbarbituric acid (RIEDEL), i, 1459.
- Propylbutylals (ADAMS and ADKINS), i, 785.
- s*-Propylcarbamide, *di*- $\beta$ -hydroxy- (LEVENE and HALLER), i, 1375.
- p*-*iso*Propyl- $\gamma$ -chloroallylbenzene, and its dibromide (BERT), i, 804.
- p*-*iso*Propyl- $\omega$ -chlorobutenylbenzene (BERT), i, 804.
- Propylene, equilibrium of hydrogen bromide with (MAASS and WRIGHT), ii, 214.
- catalytic addition of halogen acids to (WIBAUT, DIEKMANN, and RUTGERS), i, 494.
- inhalation of (DAVIDSON), i, 1503.
- Propylene,  $\alpha\beta\gamma$ -tribromo- $\alpha\gamma$ -dinitro- (WIELAND and JUNG), i, 1374.
- $\alpha$ -Propylene oxide, heat of combustion of (ZUBOV and SWIENTOSLAWSKI), ii, 364.
- iso*Propylfurfuryl (ADAMS and ADKINS), i, 785.
- iso*Propylheptyl (ADAMS and ADKINS), i, 785.
- l*-*iso*Propylcyclohexan-3-one, and its semicarbazone (SEIFERT), i, 407.
- 2-Propylcyclohexanone, 2-cyano-, and its semicarbazone (v. AUWERS, BAHR, and FRESSE), i, 312.
- o*-Propylcyclohexylamines, and their salts (v. BRAUN and BAYER), i, 428.
- iso*Propylidene compounds of sugars (FREUDENBERG and DOSER), i, 366; (FREUDENBERG and WOLFF), i, 367.
- Propylidenedi-indone (RADULESCU and GEORGESCU), i, 1287.
- iso*Propylidenequinamide (KARRER, WIDMER, and RISO), i, 673.
- $\alpha$ -Propylindole (VERLEY and BEDUWE), i, 578.
- 3-Propylindole, 3- $\gamma$ -amino-, and its salts (MAJIMA and HOSHINO), i, 1451.
- cyclo*Propylmethylthiocyanate (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.
- cyclo*Propylmethylamine, and its benzoyl derivative (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.
- cyclo*Propylmethylbenzylmethylamine, and its hydrochloride (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.
- cyclo*Propylmethylmethylaniline, and its salts (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.
- cyclo*Propylmethylmethylethanamide (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.
- 2-Propyl-3-phenylisindolinone, 3-hydroxy-2- $\gamma$ -bromo-, and its derivatives (KOHN and LAKNER), i, 1276.
- $\gamma$ -4-*iso*Propylphenylpropinene (BERT, DORIER, and LAMT), i, 1373.
- Propylphthalimide,  $\gamma$ -bromo-, action of magnesium phenyl bromide on (KOHN and LAKNER), i, 1276.
- n*-Propyl-*m*-toluidine, 2:4- and 4:6-dinitro- (GIUA and PETRONIO), i, 1397.
- 1-*iso*Propylurazole (GOODWIN and BAILEY), i, 843.
- iso*Propylurethane, *aa*-dichloro-, and *aa*-diiodo- (CHINOIN FABRIK CHEMISCH-PHARMAZEUTISCHER PRODUKTE), i, 13.
- n*-Propylvinylcarbinol, resolution and rotation of, and its salts and esters (KENYON and SNELLGROVE), i, 771.
- 4-*iso*Propyl-*o*-xylene, trinitro- (KRUBER), i, 1138.
- 4-*iso*Propyl-*o*-xylenesulphonic acid, and its sodium salt and amide (KRUBER), i, 1138.
- Prosopanche Burmeisteri*, constituents of (ZELLNER), i, 1025.
- Prostate, tuberculosis and calcification of (MCKENZIE, SENG, and MACALLUM), i, 330.
- effect of injections of emulsions of, on metabolism (KORENCHIEVSKY and CARR), i, 1513.

- Prostate**, nitrogen excretion in hypertrophy of (NICOLAYSEN), i, 857.
- Proteases**, animal, specificity of (WALDSCHMIDT-LEITZ and SCHÄFFNER), i, 1110.
- $\alpha$ -Proteases**, effect of quinine compounds and urea on (SMORODINCEV and ADOVA), i, 335.
- Proteic acid**, hydroxy-, in urine (FREUND and SITTENBERGER-KRAFT), i, 723.
- Proteins** (JOHNSON and DASCHAVSKY), i, 176; (LÜDTKE), i, 450; (SHELTON and JOHNSON), i, 602; (SØRENSEN), i, 1110; (HOFFMAN and GORTNER), i, 1479.
- structure of (ABDERHALDEN, KLARMANN, and KOMM), i, 174; (ABDERHALDEN and KOMM), i, 175, 320, 848, 1475; (HERZOG), i, 450; (BLANCHETIERE), i, 602; (TROENSEGAARD and FISCHER; BERGMANN), i, 848; (ABDERHALDEN), i, 848, 1341; (ABDERHALDEN and SCHWAB), i, 991.
- structure and synthesis of (WALDSCHMIDT-LEITZ and SCHÄFFNER), i, 1110.
- synthesis of, by enzymes (WASTENEYS and BORSOOK), i, 102; (BORSOOK and WASTENEYS), i, 472, 864, 865; (RONA and KLEINMANN), i, 473.
- molecular weights of (COHN, HENDRY, and PRENTISS), ii, 641.
- ionisation of (LINDERSTRØM-LANG), ii, 208.
- heat denaturation of (H. and D. Y. Wu), i, 1110.
- adsorption of, by collodion membranes (HITCHCOCK), ii, 1054.
- adsorption of phenolsulphonaphthalein by (GROLLMAN), i, 1000.
- liberation of adsorbed substances from (ROSENTHAL), i, 1203.
- solubility of (SØRENSEN), i, 602.
- solubility of, in organic solvents (COOPER and NICHOLAS), i, 955.
- depolymerisation of (SHIBATA), i, 1109.
- coagulation of, in drops (MORAŠKO), i, 1487.
- by heat (M. and P. L. SØRENSEN), ii, 518.
- hydrolysis of (SCHREYVER, BUSTON, and MUKHERJEE), i, 794.
- by enzymes (RONA and KLEINMANN), i, 103.
- with hydrochloric acid (YAITSCHNIKOV), i, 320.
- decomposition of, by microbes (WAKSMAN and LOMANITZ), i, 867.
- Proteins**, decomposition of, by pepsin (UHLENBRUCK), i, 742.
- effect of amino-acids on (SEUFFERT and MARKS), i, 730.
- decomposition products of (IVANOV), i, 1480.
- influence of glutathione on oxidation of (HOPKINS), i, 1499.
- compounds of acids with (MODERN and PAULI), ii, 518.
- combination of, with acids and alkalis (HARRIS), i, 450.
- cystine and tryptophan in (JONES, GERSDORFF, and MOELLER), i, 98.
- action of, on gold sols (ZSIGMONDY and JOËL), ii, 35; (REINDERS), ii, 1059; (KREBS), ii, 1155.
- action of hypobromites on (GOLD SCHMIDT and STEIGERWALD), i, 1109; (ABDERHALDEN), i, 1475.
- action of paraldehyde on (COOPER), i, 91.
- action of pepsin and hydrochloric acid on (VAN URK), i, 1507.
- sulphur in (HOFFMAN), i, 1480.
- compounds of zinc chloride with (PAULI and SCHÖN), ii, 198.
- new amino-acid from (GORTNER and HOFFMAN), i, 602.
- metabolism of. See Metabolism.
- action of bile on pancreatic digestion of (ROSENOV), i, 1507.
- precipitation of, from body fluids (WUNSCHENDORFF), i, 1346.
- substitutes for, in diet of goats (PAASCH), i, 1498.
- replacement of, by urea in diet of milch animals (MORGAN, WINDHEUSER, and OHLMER), i, 217.
- Bence-Jones, precipitin reaction of (HEKTOEN and WELKER), i, 328.
- in blood, and their determination (HUECK), i, 1484; (HOLM and TOMASSON), i, 1485.
- gluten, from wheat flour (BLISH and PINCKNEY), i, 176.
- halogenated (VANDEVELDE), i, 91, 707, 1477.
- hydrolysed, dynamic action of, as food-stuffs (MELLY and v. RÖTH), i, 193.
- of muscle, isoelectric points of (WÖHLISCH and SCHRIEVER), i, 1488.
- colloid characteristics of (WEBER), i, 995.
- in germinating seeds (FODOR and REIFENBERG), i, 756.
- of serum (LEENDERTZ), i, 96.
- calcium content of (CSAPÓ and FAUPEL), i, 96.
- precipitation of (RUSZCZYNSKI), i, 322.

- Proteins**, of serum, precipitation of, by salts (CSAPÓ and V. KLOBU-SITZKY), i, 178.  
 precipitin reactions of (HEKTOEN and WELKER), i, 828.  
 of skin, extraction of (PINES, MILLER, and ALLES), i, 831.  
 water-soluble, electrolyte-free (ADOLF and PAULI), ii, 289; (PAULI), ii, 319.  
 effect of glycerol on the biuret reaction for (SEIBERT and LONG), i, 1110.  
 reaction of, with phosphoric acid (ROMIEU), i, 607.  
 analysis of the hydrolysis products of (WASTENEYS and BORSOOK), i, 97.  
 detection of (NOUÏ), ii, 1212.  
 determination of, electrometrically, with alkalis (HOFFMAN and GORTNER), ii, 1011.  
 determination of amino acids from hydrolysis of (CHERBULIEZ and WAHL), ii, 1211.  
 determination of nitrogen in (MAIN and LOCKE), i, 997; (TER MEULEN), ii, 599.  
 determination of nitrogen distribution in (GORTNER and SANDSTROM), ii, 908.  
 determination of phosphorus in (SØRENSEN), ii, 900.  
 determination of tyrosine in (FÜRTH and FISCHER), ii, 448.  
**Proteoses**, solubility of, in organic solvents (COOPER and NICHOLAS), ii, 955.  
 of egg-albumin (RUDD), i, 320, 321.  
*Proteus*, formation of gelatinase by (CLARK and MERRILL), i, 1511.  
**Protoparaffin**. See Ceresin.  
**Protoplasm**, toxic action of copper and gold salts on (VOEGTLIN, JOHNSON, and DYER), i, 1116.  
 living, permeability of (OSTERHOUT), i, 1355.  
*Provaekia edax*, influence of hydrogen-ion concentration on the growth of (RAABE), i, 868.  
*Prunus pissardi*, flavone from the leaves of, and its reactions (JONESCO), i, 824, 825.  
**Prussian blue**, formation of, in cyanide test (SCHULEK), ii, 71.  
 sols, coagulation of (GHOSH and DHAR), ii, 778; (WEIR), ii, 1155.  
**Prussic acid**, labile. See *isohydrocyanic acid*.  
**Pseudo-acids** (KARVE), ii, 1188.  
**Psicaine**, synthesis of (WILLSTÄTTER), i, 424.  
 experiments with (WAGNER), i, 1503.  
*Psychotis verticillata*, essential oil of (MORANI), i, 146.  
*Pulmonaria officinalis*, constituents of (ZELLNER), i, 763.  
**Pump** for circulation of gases (MENZIES, COLLINS, and TYSON), ii, 818.  
 automatic mercury (McLAUGHLIN and BROWN), ii, 428.  
 laboratory (CAMERON), ii, 707.  
 circulating, for corrosive gases (KREMERs), ii, 427.  
**Pungency** in relation to chemical constitution (NOMURA and HOTTA), i, 1156.  
**Purine derivatives**, excretion of, in dogs (LANGFELDT and HOLMSEN), i, 1205.  
**Putrescine**, behaviour of, in the liver (FELIX and ROTHLEI), i, 859.  
**Pycnometer**, new (H. C. and E. W. PARKER), ii, 288.  
**Pylorus**, dehydration after obstruction of the (GAMBLE and ROSS), i, 1352.  
**Pyocyanine** (WREDE and STRACK), i, 174.  
 and its derivatives (WREDE and STRACK), i, 844.  
**Pyramidone**, compound of veronal with (PFEIFFER), i, 1318.  
**Pyranones**, 1-thio- (ARNDT, NACHTWEY, and PUSCH), i, 1307.  
**Pyrazoles**, synthesis of (BÜLOW and BAUR), i, 1327.  
**Pyrazole series**, isomerism in (v. AUWERS and NIEMEYER), i, 1176; (v. AUWERS and MAUSS), i, 1178; (v. AUWERS and DANIEL), i, 1180.  
**Pyrazole-blue**, *m*- and *p*-chloro- (CHATTAWAY and STROUTS), i, 71.  
**Pyrazolecarboxylamides**, formation and transformation of (v. AUWERS and OTTENS), i, 1459.  
**Pyrazolecarboxylic acids**, synthesis of (MINUNNI), i, 1175.  
**Pyrazolines**, influence of constitution on formation of, from phenylhydrazones (v. AUWERS and KREUDER), i, 1454.  
 spontaneous oxidation of (LOCQUIN and HEILMANN), i, 1185.  
 substituted isomeric (FREUDENBERG and STOLL), i, 70.  
**Pyrazolone derivatives**, preparation of (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 301.  
**Pyrid-2-imine**, 1-chloroacetyl derivative, and its salts (FINGER and KRAFT), i, 73.  
**Pyridine**, electrolytic reduction of (MARIE and LEJEUNE), i, 577.  
 nucleus, fission of, during reduction (SHAW), i, 299.

- Pyridine**, equilibria of, with cadmium chloride and with zinc chloride (MASON and MATHEWS), ii, 1063.  
 arsenyl tartrate (DEBUQUER), i, 978.  
 compounds formed by action of, on *β*-dibromosallyl bromide (v. BRAUN and KÜHN), i, 1375.  
 compound of hexanitrodiphenylamine and (DESVERGNES), i, 1056.  
 hydroferricyanide (CUMMING), i, 122.  
 compounds of silver perchlorate, water, and (MACY), ii, 536.  
 derivatives, formation of, from acyclic  $\beta$ -diketones (BLAISE and MONTAGNE), i, 835.  
 preparation of alkyl derivatives of (CHEMISCHE FABRIK AUF AKTIEN VORM. E. SCHERING), i, 431.
- Pyridine**, 2-amino-, tautomerism of, and its derivatives (TSCHITSCHIBABIN), i, 153.  
 condensation of, with fatty-aromatic ketones (SCHMID and BANGLER), i, 1459.  
 2:6-diamino-, preparation of (CHEMISCHE FABRIK AUF AKTIEN VORM. E. SCHERING), i, 589.  
 2:3-diamino-, and 3-nitro-2-amino-, acetyl derivatives, and 2-chloro-, 2-chloro-5-bromo-3-nitro-, 2-chloro-5-iodoxy-, and their derivatives (PIERONI and HAUPT), i, 1316.  
 3-bromo-, and 3-iodo-, and their salts (BAUMGARTEN), i, 1331.  
 2-chloro-5-iodo-, 5-iodo-2-amino-, and 5-iodo-2-nitroamino-, and their derivatives (MAGIDSON and MENSCHIKOFF), i, 301.  
 hydroxy-derivatives (TSCHITSCHIBABIN), i, 299.  
 3-nitro-, and 3-nitroso- (KIRPAL and REITER), i, 697.  
*α*-nitro-2-amino- (TSCHITSCHIBABIN), i, 1328.  
 3-nitro-2-nitroamino- (TSCHITSCHIBABIN and KONOVALOVA), i, 1329.  
 5-nitro-2-nitroamino-, reactions of, and 5-nitro-2-nitroso- (RÄTH and PRANGE), i, 978.
- Pyridines**, arylated (DILTHEY and SCHAEFER), i, 153; (DILTHEY and RADMACHER), i, 1441.
- Pyridines**, amino-, tautomerism of (TSCHITSCHIBABIN and OSSETROVA; TSCHITSCHIBABIN), i, 1328.
- Pyridine-1-acetic acid**, 1-chloro-2-hydroxy- (KIRPAL), i, 66.
- Pyridine-2-carboxylic acid**, 4:6-dichloro-5-cyano- (SPÄTH and KOLLER), i, 1446.
- 2-Pyridine-3-carboxylic acid**, 2-amino-, anhydride and acetyl derivative, methyl ester (SEIDE), i, 72.
- Pyridine-3-sulphonic acid**, 4-amino-, and 4-hydroxy-, and their barium salts (KOENIGS and JUNGFER), i, 154.
- Pyridinium methiodide**, compound of benzidine with (EMMERT, ROH, and KOBERNE), i, 588.
- Pyridofluorene**, and its derivatives (MILLS, PALMER, and TOMKINSON), i, 69.
- Pyridofluorenone-1:3:4-tricarboxylic acid** (MILLS, PALMER, and TOMKINSON), i, 69.
- 2-Pyridone**, 5-iodo- (MAGIDSON and MENSCHIKOFF), i, 302.
- 4-Pyridone**, 3-amino-, and 3-nitro-5-amino-, salts of (CROWE), i, 1319.
- 2-Pyridone-1-acetic acid**, and its silver salt and derivatives (KIRPAL), i, 66.
- 2-Pyridoneimine-1-acetic acid**, and its chloroplatinate (TSCHITSCHIBABIN), i, 158.
- Pyridonemethides**. See Methylene dihydropyridines.
- 4:5-Pyridothiophen**, 3-hydroxy- (KOENIGS and GEISSLER), i, 166.
- Pyridotripyrocatechylantimonie acid**, potassium and sodium salts (REIHLEN, SAPPER, and KALL), i, 912.
- Pyridotripyrocatechylarsenic acid**, sodium salt (REIHLEN, SAPPER, and KALL), i, 912.
- $\alpha$ -Pyridylanthranilic acid**, sodium salt (SEIDE), i, 160.
- 5-Pyridylazo- $\beta$ -naphthol**, 2-chloro- (PIERONI and HAUPT), i, 1316.
- Pyridylglycine**, and its derivatives (KEINDEL and RAUCH), i, 438.  
 monohydrate (FINGER and KRAFT), i, 73.
- 3-Pyridylglycine-2-carboxylic acid**, (SUCHARDA), i, 1331.
- 5-Pyridylhydrazine**, 2-chloro- (PIERONI and HAUPT), i, 1316.
- $\beta$ -3-Pyridylhydroxylamine** (KIRPAL and REITER), i, 698.
- 3-Pyridyl  $\delta$ -methylaminobutyl ketone**, and its salts (RUZICKA, SEIDEL, and LIEBL), i, 290.
- 3-Pyridyl 3-N-methyl-2-piperidonyl ketone**, and its picronolate (RUZICKA, SEIDEL, and LIEBL), i, 290.
- C-(2'-Pyridyl)-1-methylpyrrole**, and its methiodide (WIBAUT and COPPENS), i, 75.
- Pyridyl-2-nitroamine**, alkylation of (TSCHITSCHIBABIN and MENSCHIKOV), i, 437.
- N-2-Pyridylpyrrole** (CHEMISCHE FABRIK AUF AKTIEN VORM. E. SCHERING), i, 1329.
- 2-Pyridylpyrroles**, and their picrates (TSCHITSCHIBABIN and BYLINKIN), i, 1174.

- Pyrimidines**, phenylhydrazine derivatives of (LEVENE), i, 979.
- Pyriminazole**, and its chloroplatinate (TSCHITSCHIBABIN), i, 1328.
- δ-Pyridigotin**, and its derivatives (SUCHARDA), i, 1331.
- Pyridoxyl**, constitution of (FINGER and KRAFT), i, 73.
- Pyrites** from Serbia (BARTHOUX), ii, 429.
- Pyrocatechol**, antimony, arsenic, and bismuth compounds with (ROSENHEIM and BARUTTSCHISKY), i, 808.
- compounds of boric acid and (WEIL and ADLER), i, 136.
- compounds of molybdic, tungstic, and uranic acids with, and their salts (FERNANDES), i, 912, 1061.
- complex vanadyl salts (ROSENHEIM and MONE), i, 1412.
- determination of derivatives of, colorimetrically (GLASSTONE), ii, 331.
- Pyrocatechol**, 4-amino-, acetyl and benzoyl derivatives (KEHRMANN and HOEHN), i, 560.
- 4:5-diamino-, and its derivatives, and 5-nitroso-4-amino-, 4-acetyl derivative (HOEHN), i, 938.
- Pyrocatecholboric acid**, 3-nitro-, salts of (BÖSEKEN and MIJS), i, 912.
- Pyrocatechol tannins**, detection of (VOGEL), ii, 827.
- Pyrochloidalic acid**, oxidation of (WIELAND), i, 1066.
- Pyrodeoxybiliaric acid**, derivatives of (WIELAND), i, 1066.
- Pyrogallol**, compounds of molybdic, tungstic, and uranic acids with, and their salts (FERNANDES), i, 912, 1061.
- determination of derivatives of, colorimetrically (GLASSTONE), ii, 331.
- Pyrogallolacrolein** (SEN and SARKAR), i, 812.
- Pyrogallolbenzein**, and its hydrochloride (ORNDORFF and WANG), i, 277.
- and its *o*-hydroxy derivative (SEN and SARKAR), i, 812.
- Pyrogallolcoumारेin** (SEN and SIRCAR), i, 554.
- Pyrogallolglycerein** (SEN and SARKAR), i, 812.
- Pyrogallol-*omp*-tri-hydroxybenzein** (SEN, SINHA, and SARKAR), i, 916.
- Pyrogallolisatein** (SEN and SIRCAR), i, 555.
- Pyrogallolsalicylein** (SEN and SIRCAR), i, 554.
- Pyrothobiliaric acid**, methyl ester (WINDAUS, BOHNE, and SCHWARZKOPF), i, 406.
- Pyromellitic acid**, condensation of, with decalin and tetralin (PHILIPPI, SEKA, and FUNKE), i, 556.
- derivatives of (DE DIESBACH and ZURRIGGEN), i, 1427.
- Pyromellitic acid**, bromo-, and its anhydride (PHILIPPI, SEKA, and BAUER), i, 555.
- Pyromellitid-di-imidines**. See Bis(amino-methyl)-benzenedicarboxylic acid, dilactams.
- Pyromellitide**. See Bis(hydroxymethyl)-benzenedicarboxylic acid dilactone.
- Pyrometers**, black body for calibration of (ROBERTS), ii, 756.
- micro- (HENNING and HAUSE), ii, 427.
- Pyromucic acid**, isocamyl ester (NAKAI), i, 360.
- furfuryl ester (MEERWEIN and SCHMIDT), i, 1239.
- Pyrone**, and thio-, halochromism of halogenated derivatives of (ARNDT and PUSCH), i, 1304.
- Pyrone**, 4-thio- (ARNDT, SCHOLZ, and NACHTWEY), i, 58.
- Pyrones**, structure of (ARNDT, SCHOLZ, and NACHTWEY), i, 57.
- Pyrones**, 1-thio- (ARNDT, NACHTWEY, and PUSCH), i, 1307.
- Pyrone colouring matters** (FARBEN-FABRIKEN VORM F. BAYER & Co.), i, 955.
- γ-Pyronecarboxylic acids**, effect of boric acid on the solubility and conductivity of (VERKADE), ii, 128.
- Pyroxenes**, crystal structure of (WYCKOFF, MERWIN, and WASHINGTON), ii, 1126.
- Pyroxonin** (MAJIMA and SUGINOME), i, 1448.
- Pyroxonitin**, and its compound with chloroform (MAJIMA and SUGINOME), i, 1448.
- Pyroflavin** (KÖNIG), i, 1184.
- Pyrrole**, absorption spectrum of (GALLERANI), ii, 266.
- action of iodine on (G. E. K. and H. E. H. BRANCH), i, 66.
- derivatives, absorption spectra of (KORSCHUN and ROLL), ii, 258.
- bromination and iodination of (TERRENTIEV and TSCHELINOV), i, 295.
- Pyrrole**, iodo-derivatives (PIERONI and NOCENTINI), i, 1096.
- 4-iodo-3-nitro- (TERRENTIEV and TSCHELINOV), i, 295.
- Pyrroles**, action of formaldehyde and alcohols on (FISCHER and NENITZESCU), i, 834.
- Pyrrole colouring matters** (KÖNIG), i, 1184.

**Pyrrole series**, preparation of aldehydes and ketones of (KALLE & Co.), i, 297.

**Pyrrolealdehyde**, constitution of (RAS-TELLI and MINGOZZI), i, 1316.

**Pyrrole-2-aldehyde**, *tetraiodo-* (TERENTIEV and TSCHELINCEV), i, 295.

**Pyrrole-2-carboxylic acid**, *n*-propyl ester (ODDO), i, 296.

**Pyrrole-2-glyoxylic acid**, ethyl ester (ODDO), i, 297.

**Pyrrolenaphenylcarbinol-*o*-carboxylic acid**, ammonium salt (ODDO and MINGOIA), i, 978.

**Pyrrolenepthalides** (ODDO), i, 978.

**Pyrrolenepthalides** (ODDO and MINGOIA), i, 978.

**Pyruvamide**, hydrazones of (BÜLOW and SPENGLER), i, 1103.

**Pyruvic acid**, absorption spectra and tautomerism of (HENRI and FROMAGEOT), ii, 929.

heat of combustion of (BLASCHKO), i, 1011.

catalytic decomposition of (E. and F. MÜLLER), ii, 414.

action of *p*-aminophenylarsinic acid and, on aldehydes (ADAMS and JOHNSON), i, 319.

action of carboxylase of yeast on (NEUBERG), i, 336.

possible rôle of, in growth of bacteria (QUASTEL), i, 1216.

fate of, in the animal body (OTANI), i, 731.

esters, hydrolysis of (SKRABAL, PFAFF, and AIROLDI), ii, 139.

**Pyruvic ureide**, bromonitro- and nitro-, and its acetyl derivative (DAVIDSON), i, 975.

**Pyruvyl bromide and chloride**, hydrazones of (BÜLOW and SPENGLER), i, 1103.

**Pyruvylalanine** (BERGMANN, MIEKLEY, and KANN), i, 1134.

**Pyrylium compounds** (DILTHEY and FLORET), i, 55; (DILTHEY and RAD-MACHER), i, 1441.

**Pyrylium salts**, synthesis of (PRATT and ROBINSON), i, 422, 825, 826; (MALKIN and ROBINSON), i, 827.

**Pyvuril** (DAVIDSON), i, 533.

Q.

**Quantum numbers and series spectra** (LINDSAY), ii, 915.

and atomic numbers (HARTREE), ii, 467.

**Quantum rule**, Epstein-Sommerfeld (KORDYSCH), ii, 886.

**Quantum theory** in relation to the atomic theory and energetics (BERTHELOT), ii, 1022.

and molecular formation (BOERN and FRANCK), ii, 266.

application of, to gases (PLANCK; EINSTEIN), ii, 495.

and Bohr's correspondence principle (TOLMAN), ii, 466.

of radiation (BOTHE and GEIGER; KETOHUM), ii, 1.

and resonance radiation (DARWIN), ii, 169.

**Quartz**, structure of (BRAGG), ii, 1131.

and its reflexion of X-rays (GIBBS), ii, 367.

spiral springs of (SMITH), ii, 818; (DRANE), ii, 995.

**Quartz mercury lamp**. See under Lamp.

**Quebrachitolpentaphosphoric acid**, salts of (CONTARDI), i, 277.

**Quercetin**, isolation and identification of, in apple peel (SANDS), i, 216.

5-methyl ether, and its potassium salt and tetra-acetyl derivative (KUBOTA and PERKIN), i, 1160.

**Quinaketones**, monocyclic (RUZICKA, SEIDEL, and LIEBL), i, 289.

**Quinaldine**. See 2-Methylquinoline.

**Quinaldines**, condensation of hydroxy and methoxy derivatives of, with aromatic aldehydes (TRÖGER and DUNKER), i, 432.

**Quinatoxins**, aliphatic (RUZICKA, SEIDEL, and LIEBL), i, 289.

**Quinazoline**, bromo-4-hydroxy-, and its methiodide (SEIDE), i, 159.

**Quinhydrone**, *di*cyan-, reduction potential of (RIDEAL), ii, 546.

**Quinhydrones** (PFEIFFER, GORREL, and ANGERN), i, 271.

reduction potentials of (BILLMANN, JENSEN, and PEDERSEN), ii, 404.

**Quinhydrone electrode**. See Electrodes.

**Quinic acid**, constitution of (KAERER, WIDMER, and RISO), i, 673.

utilisation of, by moulds and bacteria (BUTKEVITSCH), i, 1511.

**Quinidine**, determination of, spectro-photometrically (FABRE), ii, 1212.

**Quinine**, action of sulphuric acid on (GIEMSA and BONATH), i, 291.

compounds of cupric hydroxide and (ERBEN), i, 573.

effect of, on fermentation in the organism (SMORODINCEV and ADOVA), i, 335.

iodobismuthate (FRANÇOIS and SEGUIN), i, 1084.

salicylosalicylate (MERCK & Co.), i, 1443.

- Quinine** chlorostannate and chlorostannite (DRUCE), i, 1096.  
 arsenious tartrate (DEBUQUET), i, 1090.  
 determination of, spectrophotometrically (FABRE), ii, 1212.
- Quinine**, amino-, and its salts and derivatives (FRÄNKEL, TRITT, MEHRER, and HERSCHMANN), i, 573.
- apoQuinine**, and its benzoate hydrochloride (FRÄNKEL and BUELEA), i, 573.  
 derivatives of (SUZKO), i, 1449.
- $\beta$ -isoQuinine**, and its derivatives, and **dibromo-** (SUZKO), i, 1448.
- Quinine series** (RUZICKA, SEIDEL, and LIEBL), i, 289.
- Quininetrimethylammonium** picrate (FRÄNKEL, TRITT, MEHRER, and HERSCHMANN), i, 574.
- isoQuinocyanines**, 4-chloro-, synthesis of, and their derivatives (FISCHER, MÜLLER, and VILSMAYER), i, 439.
- Quinoidine** extracts from animal substances (KINNERSLEY, PETERS, and SQUIRES), i, 997.
- Quinol**, oxidation of, in presence of aliphatic amines (HARGER), i, 24.  
 ethers, substitution in derivatives of (RUBENSTEIN), i, 1278.  
 additive compounds of aromatic amines with (HARGER), i, 23.
- Quinol**, **tribromo-**, dimethyl ether (KOHN and GUTTMANN), i, 1263.  
 bromonitro- and chloronitro-, ethers of (KOHN and MARBERGER), i, 1264.  
**tetrachloro-** (BINZ and RÄTH), i, 446.
- Quinols**, **mono-** and **di-nitro-**, colorimetric dissociation constants of (PAIDEAUX and NUNN), i, 24.
- $\psi$ -Quinols**, preparation of (FIOHTER and MEYER), i, 331.
- Quinol-*om*-dihydroxybenzein** (SEN, SINHA, and SARKAR), i, 916.
- Quinoline**, centroid structure for (FUSON), i, 1098.  
 arsenyl tartrate (DEBUQUET), i, 973.  
 ethiodide, compounds of, with bromoform and iodoform (STEINKOPF and BESSARITSCH), i, 495.  
 derivatives (JOHN), i, 1317; (JOHN and NOZIOZKA), i, 1451; (JOHN and WEBER), i, 1452.
- Quinolines**, 8-amino-, and its derivatives (SEKA), i, 537.  
 8-hydroxy-, salts of (ZETSCHE, SILBERMANN, and VIELT), i, 1411.
- isoQuinolines**, derivatives, syntheses of (HAWORTH and PERKIN), i, 968, 969, 970; (HAWORTH, PERKIN, and RANKIN), i, 969; (HOSVYTH, KELLY, and FRYMAN), i, 1167; (HAWORTH, PERKIN, and FINK), i, 1168.
- n*- and iso-Quinolines**, hydroferricyanides of (CUMMING), i, 122.
- Quinolines**, 4-amino-, substituted (FISCHER, DIEPOLDER, and WÖLFEL), i, 438.  
 hydroxy-derivatives (TSCHITSCHIBABIN), i, 299.  
 diiodohydroxy- (PASSEK), i, 1170.  
 nitroamino- (TSCHITSCHIBABIN, WITKOVSKY, and LAPSOHN), i, 838.
- Quinoline-4-aldehyde**, and its phenylhydrazone, preparation of (CHEM. FABRIK AUF AKTIEN VORM. E. SCHERING), i, 1452.
- Quinolines**, carboxylic acid, dihydroxy-, in rice husks (SAHASHI), i, 1520.
- Quinolinic acid**, preparation of, and its derivatives (SUCHARDA), i, 1317.
- Quinoliphthalein**, structure and derivatives of (DOMINIKIEWICZ), i, 53.
- 4-Quinolyl  $\epsilon$ -amino- $\alpha$ -carbethoxyamyl ketone**, and its picronate (RUZICKA, SEIDEL, and LIEBL), i, 289.
- 4-Quinolyl  $\epsilon$ -benzamido- $\alpha$ -carbethoxyamyl ketone**, and its picrate (RUZICKA, SEIDEL, and LIEBL), i, 289.
- 4-Quinolyl  $\delta$ -benzoylthylaminobutyl ketone**, and its picrate (RUZICKA, SEIDEL, and LIEBL), i, 289.
- 4-Quinolyl  $\delta$ -benzoylthylamino- $\alpha$ -carbethoxybutyl ketone** (RUZICKA, SEIDEL, and LIEBL), i, 289.
- 4-Quinolyl  $\epsilon$ -benzoylmethylaminoamyl ketone** (RUZICKA, SEIDEL, and LIEBL), i, 289.
- 4-Quinolyl  $\epsilon$ -benzoylmethylamino- $\alpha$ -carbethoxyamyl ketone**, and its salts (RUZICKA, SEIDEL, and LIEBL), i, 289.
- 4-Quinolyl  $\alpha$ -bromo- $\epsilon$ -aminoamyl ketone**, and its dihydrobromide (RUZICKA, SEIDEL, and LIEBL), i, 290.
- 4-Quinolyl  $\alpha$ -bromo- $\epsilon$ -methylaminoamyl ketone**, and its dihydrobromide (RUZICKA, SEIDEL, and LIEBL), i, 289.
- 4-Quinolyl *N*-ethyl-2-pyrrolidyl ketone**, and its dipicronate (RUZICKA, SEIDEL, and LIEBL), i, 290.
- 4-Quinolyl *N*-methyl-2-piperidylcarbinol**, and its salts (RUZICKA, SEIDEL, and LIEBL), i, 290.
- 4-Quinolyl *N*-methyl-2-piperidyl ketone**, and its salts (RUZICKA, SEIDEL, and LIEBL), i, 290.
- 4-Quinolyl *N*-methyl-2-pyrrolidyl ketone**, and its hydrochloride (RUZICKA, SEIDEL, and LIEBL), i, 290.
- 4-Quinolyl 2-piperidyl ketone**, and its phenylhydrazone dipicrate (RUZICKA, SEIDEL, and LIEBL), i, 290.
- Quinone**. See Benzquinone.
- Quinones**, bactericidal action of (MORGAN and COOPER), i, 207.

*o*-Quinones, oxidation of (CHARRIER and BERETTA), i, 271.

Quinonedichlorodi-imines, heats of formation of (BLASZKOVSKA), ii, 1042.

Quinonechloroimines, heats of formation of (BLASZKOVSKA), ii, 1042.

Quinone-imide colouring matters (KEHRMANN and CHERPILLOD), i, 302; (KEHRMANN and FALKE), i, 303; (KEHRMANN and PRUNIER), i, 304.

Quinoneimine colouring matters (KEHRMANN and STANOVÉVITCH), i, 1334; (KEHRMANN and HAENNY), i, 1330; (KEHRMANN and SAFAR), i, 1331; (KEHRMANN and LISTVA), i, 1332.

$\alpha$ -Quinoquinolone, constitution of (SEIDE), i, 159.

Quinotoxine, oxime of, and amino-, and its salts (FRÄNKEL and DIAMANT), i, 574.

phenylhydrazones (FRÄNKEL, TRITT, MEHRER, and HERSCHMANN), i, 574.

$\beta$ -isoQuinotoxine, and its derivatives (SUSZKO), i, 1449.

Quinoxaline, 2:3:6-trichloro-, and 6-chloro-2:3-dihydroxy- (KEHRMANN and BENER), i, 443.

## B.

Rabbits, influence of histamine and tyramine on nitrogen metabolism of (IWATSURU), i, 1502.

Racemic acid, formation of, from *cis*-oxidoethylenedicarboxylic acid (BÖSEKEN), i, 1237.

Racemic compounds, liquid (AGUIRRECHE), ii, 1142.

Racemisation (LEVENE and PFALTZ), i, 795.

asymmetric catalytic (MCKENZIE and SMITH), i, 822.

Radiation, theories of (MIE), ii, 1128.

quantum theory of (BOTHE and GERGER; KETCHUM), ii, 1; (LODGE), ii, 465, 624.

nature of (SLATER), ii, 926.

absorption of, by emitting atoms (DE BROGLIE and THIBAUD), ii, 165.

transformation of atoms into (STERN), ii, 1021.

and matter (STERN; WESTPHAL), ii, 926.

from non-luminous flames (HASLAM, LOVELL, and HUNNEMAN), ii, 475.

from incandescent solids, photo-electric action of (BECKER), ii, 1107.

emitted by high resistance conductors (REBOUL), ii, 345.

equilibria between atoms, electrons, and (DIRAC), ii, 6.

Radiation, corpuscular, from salts (VOLMER), ii, 7.

impulse (MIE), ii, 844.

resonance, polarisation of, in magnetic fields (ELLETT), ii, 628; (BREIT), ii, 629.

and the quantum theory (DARWIN), ii, 169.

visible, from solid targets (FOOTE, MEGGERS, and CHENAULT), ii, 80.

Radiation potentials (MOHLER), ii, 1113.

Radiation theory (CsÁSZÁR), ii, 733.

of chemical reactions (RICE), ii, 1076; (ORNSTEIN), ii, 1077.

Radicals, acyclic, migratory tendencies of hydrogen and (LÉVY and LA-GRAVE), i, 679.

free, electrochemical relation of, to halochromic salts (CONANT, SMALL, and TAYLOR), ii, 874.

organic, degree of negativity of (KHARASCH and GRAFFLIN), i, 1107.

tenacity of (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1401.

with respect to nitrogen (v. AUWERS and PFUHL), i, 1100.

migration of (TIFFENEAU and ORÉKHOV), i, 878, 679.

Radioactive compounds, fractional crystallisation of (OHLOPIN), ii, 438.

elements (HARKINS and GUY), ii, 1109.

electrolytic separation of (TÖDT), ii, 54.

minerals as indicators of geological age (ELLSWORTH), ii, 593.

particles, colloidal, electrical behaviour of (EHRENHAFT), ii, 465.

Radioactivity, measurements of (MATIGNON and MARCHAL), ii, 1110.

effect of sunlight on (MARACINEANU), ii, 343.

quantum theory of (SMEKAL), ii, 347.

Radio-luminescence, decay and regeneration of (VIOL, KAMMER, and MILLER), ii, 1117.

Radium,  $\beta$ -ray spectrum of (HAHN and MEITNER), ii, 9.

heat set free by, as  $\gamma$ -rays (THIBAUD), ii, 464.

long-range particles from (YAMADA), ii, 834.

growth of polonium in preparations of (CURIE and YOVANOVITCH), ii, 464.

coloration of rock salt by (LUDEWIG and REUTHER), ii, 21.

and its isotopes, electrolytic separation of (TÖDT), ii, 54.

emanation. See Niton.

**Radium sulphate**, co-precipitation of barium sulphate and (DOERNER and HOSKINS), ii, 381.  
determination of, in uranium minerals (CURIE), ii, 241.  
separation of groups of radiations from (LATTÈS), ii, 465.  
**Radium-B** and **-C**,  $\beta$ -ray spectra of (CURTISS), ii, 622.  
 $\beta$ -particles from (D'ESPINE), ii, 622.  
heating effect of  $\gamma$ -rays from (ELLIS and WOOSTER), ii, 622, 923.  
**Radium-C**, magnetic spectrum of  $\beta$ -rays of (ELLIS), ii, 9.  
**Radium-E**,  $\beta$ -particles from (EMELÉUS),  
magnetic spectrum of  $\beta$ -particles from (CURIE and D'ESPINE), ii, 732.  
half-value period of (FOURNIER), ii, 1110.  
decay of (BASTINGS), ii, 9.  
**Radium-F**,  $\alpha$ -particles from (HAMMER and PYCHLAN), ii, 621.  
**Radon**. See Niton.  
**Ragweed**, active constituent of the pollen of (BAUMAN, CHUDNOFF, and MACKENZIE), i, 1028.  
**Raspberry**, non-volatile acids of (NELSON), i, 762.  
**Rats**, effect of yellow phosphorus on (BERNHARDT and RABL), i, 1357.  
diet of (BOAS; HARTWELL), i, 211.  
relation between diet and loss of fur in (HARTWELL), i, 464.  
white, chemistry of growth of bone in (HAMMETT), i, 1001.  
**Rays**, analysis by absorption of (LATTÈS), ii, 623.  
atomic (SCHMIDT), ii, 251.  
canal, Doppler effect in (KREFFT), ii, 3.  
canal, slow, passage of, through hydrogen (DEMPSTER), ii, 1020.  
cathode (BECKER), ii, 251.  
absorption of, in aluminium (TERBIL), ii, 79; (SCHONLAND), ii, 459.  
mass, photographic plates for detection of (ASTON), ii, 706.  
penetrating, at sea-level (HOFFMANN), ii, 1110.  
positive (WIEN), ii, 921.  
from the action of ultra-violet light on metals (DU BRIDGE), ii, 251.  
electromagnetic analysis of (DÖPEL), ii, 168.  
Röntgen, measurements of (HUDSON), ii, 17; (WEBER), ii, 458; (BLAKE), ii, 844.  
analysis by, and its use in determining constitution of organic compounds (MARK), i, 1; (ROBINSON), i, 745.

**Rays**, Röntgen, quantitative analysis with (GÜNTHER and WILCKE), ii, 237; (DELAUNÉY), ii, 822.  
apparatus for examination by (LANGE), ii, 482.  
analysis of powdered crystals by (BRENTANO), ii, 483.  
absorption of (STONER and MARTIN), ii, 257.  
absorption and scattering of (DUNBAR), ii, 455; (BARKLA and KHASTGIR; BARKLA), ii, 456.  
scattering of (WEBSTER and ROSS; ALLISON and DUANE; COMPTON and SIMON), ii, 1034.  
theory of (FRICKE), ii, 941.  
Compton and Duane effects in (BECKER), ii, 17.  
spectra of. See Spectra.  
number of  $\beta$ -rays associated with (JAUNCEY and DEFOE), ii, 1128.  
secondary  $\beta$ -rays produced in gases by (AUGER), ii, 175.  
reflection of, by crystals (HARTNER; BRAGE), ii, 735; (WEBER), ii, 1034.  
by crystals of alkali halides (ARMSTRONG, DUANE, and HAVIGHURST; KULENKAMPFF), ii, 1033.  
by barytes (ALLISON), ii, 18.  
refractive power of atoms for (MARK and TOLKSDORF), ii, 933.  
diffraction of, by polymerised liquids (DE SMEDT), i, 6.  
excitation of electrons by (BECKER), ii, 8; (SEITZ), ii, 168, 1034.  
secondary electrons produced by (FRICKE and GLASSER), ii, 16.  
K and L electrons expelled by (RICHTMYER), ii, 1129.  
ionisation by (GREBE and KRINGESMANN), ii, 79.  
photographic and ionisation effects of (BERTHOLD), ii, 252.  
intensity of, in Debye-Scherrer rings (BLUNCK and KOCH), ii, 940.  
photographic blackening by (BUSSE), ii, 1080.  
coagulation of colloidal solutions by (DOGNON), ii, 665.  
intensity of (CLARK and DUANE; DEFOE and NIPPER), ii, 836.  
J-transformation of (KHASTGIR and WATSON), ii, 836, 727; (SIRG-BARN; NIPPER), ii, 727.  
K-series of (LEIDE; RÉCHOU; RAY; v. WISNIEWSKI), ii, 457.  
from light elements (LEVI), ii, 456.  
from hot sparks (BjÖRKESSEN), ii, 830.

- Rays**, Röntgen, coloration of alkali halides by (BAYLEY), ii, 21.  
 and smectic compounds (FRIEDEL), ii, 186.  
 effect of, on blood (KONRICH and SCHELLER), i, 1356.  
 fluorescent, critical excitation frequency for (ALLISON and DUANE), ii, 930.  
 soft, from iron (THOMAS), ii, 336.  
 superposed, absorption of (WATSON), ii, 458.  
 coherence of (BARKLA and MAC-KENZIE), ii, 614.
- $\alpha$ -Rays**, decay of luminescence due to (WITMER), ii, 89.  
 excitation of electrons by (BECKER), ii, 8.
- $\beta$ -Rays**, production of, in air by Röntgen rays (IKEUTI), ii, 460.  
 spectra of. See under Spectra.  
 associated with Röntgen rays (COMPTON and SIMON), ii, 347.  
 absorption of (FOURNIER), ii, 176, 622.  
 secondary, produced in gases by Röntgen rays (AUGER), ii, 175.
- $\gamma$ -Rays**, spectra of. See under Spectra.  
 wave-lengths of (GRAY), ii, 84; (SKOBELTZYN), ii, 835.  
 photo-electric effect of (DE BROGLIE), ii, 347.  
 absorption and diffusion of (THIBAUD), ii, 257.  
 absorption and scattering of (OWEN, FLEMING, and PAGE; GRAY), ii, 84; (AHMAD), ii, 923.  
 scattering of (SKOBELTZYN), ii, 257.  
 emission of, in atomic disintegration (MEITNER), ii, 10.  
 heating effect of (ELLIS and WOOSTER), ii, 622.
- Ray liver oil**, higher alcohols of (TOYAMA), i, 4.
- Reactivity** of atoms and groups in organic compounds (NORRIS and ASHDOWN), i, 626.
- Reagents** used in analysis, specification for (COLLINS, FARR, ROSIN, SPENCER, and WICHERS), ii, 899.
- Reductase**, influence of colloids on the detection of (VIRTANEN), ii, 76.  
 of yeast (LVOV), i, 1508.
- Reduction**, mechanism of (PRINS), ii, 1169.  
 and oxidation (Cady and TAIT), ii, 1078.  
 biological (FERRO; NEILL and AVERY), i, 340.  
 with the zinc arc (STOCK, BRANDT, and FISCHER), ii, 570.
- Refraction**, Kerr constant of, for liquids (MARTIN), ii, 90.  
 double, of organic liquids (VORLÄNDER and WALTER), ii, 183.  
 molecular, and molecular volume (LORENZ and HERZ), ii, 356.
- Refractive index**, influence of arrangement of atoms on (BRAGG), ii, 92.  
 and critical resonance potentials (DAVIS), ii, 933.  
 of acids and bases, relation of, to concentration (HAMMETT), ii, 289.  
 of benzenoid hydrocarbons (EISENLOHR and SCHULZ), i, 17.  
 of doubly refracting crystals (PERRIER), ii, 1028.  
 of binary mixed liquids (LICHTENNECKER), ii, 632.  
 of organic liquids, effect of pressure on (EISELE), ii, 264.
- Rennin**, preparation of (DE TONI), i, 200.
- Reproduction**, influence of fluorides and iodides on (MAZÉ), i, 870.  
 effect of vitamin-B deficiency on (PARKES and DRUMMOND), i, 1021.  
 diet required for (SURE), i, 212, 752.
- Resins** (VESTERBERG and BORGE), i, 252.  
 relation between capacity to form, and chemical constitution (HERZOG), i, 386.  
 autoxidation of (TSCHIRCH), i, 356.  
 from hops (WALKER), i, 1479.  
 American and French, constituents of (KNECHT and HIBBERT), i, 1420.  
 phenolic (BAEKELAND and BENDER), i, 689.
- Resin acids** from hops (WIELAND, MARTZ, and HOEK), i, 1422.
- Resinates**, lead solutions of (COFFIGNIER), i, 1294; (UZAO), i, 1295.
- Resinoids**, phenolic (BAEKELAND and BENDER), i, 689.
- Resonance potentials**, critical, and refractive indices (DAVIS), ii, 933.
- Resorcinol**, condensation of primary alcohols with (SEN and SARKAR), i, 812.  
 additive compounds of, with ketones (PFELFFER, GOEBEL, and ANGERN), i, 271.  
 reactions of, with propionitriles (CHAPMAN and STEPHEN), i, 669.  
 derivatives, substitution in (RAO, SRIKANTIA, and IVENGAR), i, 675.  
 phenacyl methyl ether (FREUDENBERG, FIKENTSOHER, and HARDER), i, 420.
- Resorcinolacrolein** (SEN and SARKAR), i, 812.
- Resorcinol-*o*-aminobenzoin**, and its potassium salt, and *dibromo*- (SEN and SIRCAR), i, 554.

- Resorcinol-4-azopyridine-3-sulphonic acid** (KOENIGS and JUNGFER), i, 154.
- Resorcinolbenzein**, and its derivatives (SEN and SARKAR), i, 812.
- Resorcinol-*p*-cresolphthalein** (SEN and SIRCAR), i, 555.
- Resorcinolfluorescein** (SEN and SIRCAR), i, 555.
- Resorcinolgallein**, and *di*bromo- (SEN and SIRCAR), i, 554.
- Resorcinolglycerein**, and its derivatives (SEN and SARKAR), i, 812.
- Resorcinol-*op*-*di*hydroxybenzein**, and *tetrabromo*- (SEN, SINHA, and SARKAR), i, 916.
- Resorcinol- $\beta$ -hydroxynaphthalein** (SEN and SARKAR), i, 812.
- Resorcinolisatein**, and *tetrabromo*- (SEN and SIRCAR), i, 555.
- Resorcinolsalicylein** (SEN and SIRCAR), i, 554.
- Respiration**, measurement of (WARBURG), i, 321.
- of cells (v. SZENT-GYÖRGYI), i, 708.
- effect of rubidium and selenium ions on (ROFFO and NEUSCHLOSS), i, 1006.
- and fission in cells (MEYERHOF), i, 993.
- of tissues (TERROINE and ROCHE), i, 708.
- iron as oxygen carrier in (ELLINGER), i, 1342; (WARBURG), i, 1481.
- effect of alkalinity of blood on (GOLLWITZER-MEIER), i, 177.
- in avitaminosis and inanition (ROCHE), i, 462.
- anaërobic, in plants (NEUBERG and GOTTSCHALK), i, 213.
- Respiration apparatus** for study of plants and soils (GINSBURG), i, 1120.
- Respiratory centre**, effect of the ionic equilibria in blood on the (GOLLWITZER-MEIER), i, 177.
- exchange, apparatus for determination of (HAGEDORN), i, 177.
- effect of muscular exercise on (FURUSAWA, HILL, LONG, and LUPTON), i, 92.
- Rhamnigenol** (BRIDEL and CHARAUX), i, 686, 690.
- Rhamnoside** (BRIDEL and CHARAUX), i, 621, 686, 690.
- Rhamnosan**, from water-lily blossoms (v. LIPPMAHN), i, 366.
- Rhamnus cathartica**, composition of the bark of (BRIDEL and CHARAUX), i, 621, 1224.
- Rhenium** (NODDACK, TACKE, and BERG), i, 339.
- Rheumatism**, lactic acid in (CAJORI, CHOUTER, and PEMBERTON), i, 328.
- Rhinanthus crista galli**, changes in, during growth (BRAECKE), i, 619.
- Rhodamines** (DUTT and THORPE), i, 140.
- Rhodanic acids**, condensation of isatin with (HANN), i, 987.
- Rhodinol**, synthesis of (GRIGNARD and ESCOURROUT), i, 772.
- Rhodium** in British Guiana (HARRISON), ii, 592.
- density of (ROSE), ii, 278.
- Rhodium chloride**, compound of carbon monoxide and (MANCHOT and KÖNIG), ii, 1193.
- Rhus glabra**, tannin from (J. C. and B. L. PEACOCK), i, 1124.
- Rice**,  $\beta$ -acid from husks of (SAHASHI), i, 1520.
- Ricinine**, synthesis of (SPÄTH and KOLLER), i, 1446.
- Rickets**, experimental (MCCOLLUM, SIMMONDS, BECKER, and SHIPLEY), i, 1366.
- defective ossification in (ROBISON and SOAMES), i, 462.
- effect of calcium and sodium glycerophosphates and sodium dihydrogen phosphate on, in rats (KORENCHEVSKI and CARR), i, 464.
- influence of piperidine in (EDERER), i, 869.
- mineral constituents of blood in (ACKERSON, BLISH, and MUSSEHL), i, 609.
- "Rimu." See *Dacrydium cypressinum*.
- Rings**, formation of, in additive compounds (HIEBER, BECKER, and WAGNER), i, 1325.
- four-membered, additive formation of (INGOLD and WEAVER), i, 580; (INGOLD), i, 840.
- Ring compounds**, isomerisation of (NAMETKIN), i, 1054.
- rules for numbering (PATTERSON), i, 824.
- Ringsystems**, fission of (MISENHEIMER), i, 1835; (KUHN and EBEL), i, 1873.
- dicyclic, stereochemistry of (HÜCKEL), i, 258.
- River pebbles**, manganese in (DITTLER), ii, 322.
- River water**. See under Water.
- Robinia pseudacacia** (locust tree), proteins of the bark of (JONES, GERSDORFF, and MOELLER), i, 1225.
- glucoside from (HATTORI), i, 1443.
- Rochelle salt**. See Tartaric acid, potassium sodium salt.
- Rocks**, crystallisation in magmas of (DESCH), ii, 788.
- iodine in (v. FELLEBERG; v. FELLEBERG, GRILLINGER, and SCHWEITZER), ii, 321.

- Rocks**, igneous, equilibria in the formation of (NIGGLI), ii, 784.  
 basic volcanic, analysis of. (ATHANASTU), ii, 1207.
- Rock salt**, electrical conductivity of (v. RAUTENFELD), ii, 639; (v. SEELEN), ii, 185.  
 coloration of, by radium (LUDEWIG and REUTHER), ii, 21.  
 density of (GEISS), ii, 278; (DEFOE and COMPTON), ii, 646.  
 See also Sodium chloride.
- Rods**, thermal conductivity of (BARRATT and WINTER), ii, 756.
- iso***Rosindulines**, and their derivatives (KEHRMANN and LISTVA), i, 1332.
- iso***Rosindulinedisulphonic acid** (ARTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 591.
- Rotatory dispersion**. See Dispersion.  
 power and chemical constitution (KENYON, PHILLIPS, and TURLEY), i, 507; (KENYON and SNELLGROVE), i, 771; (HEWITT and KENYON), i, 914.  
 and constitution of optically active compounds (RUPE and KOPP), i, 274; (RUPE and VONAESCH), i, 499; (RUPE and RINDERKNECHT), i, 533.  
 calculation of, from molecular structure (DE MALLEMANN), ii, 840.  
 and structure of sugars (HUDSON and PHELPS), i, 8; (HUDSON), i, 232, 233, 514, 636; (HUDSON and KUNZ), i, 1043.  
 effect of reading errors on constants of (RINDERKNECHT), ii, 357.  
 influence of solvents on (LUCAS), ii, 742.  
 of asymmetric compounds (DE MALLEMANN), ii, 935.
- Rotenic acid** (TAKEI), i, 761.
- Rotenone** (TAKEI), i, 761.
- Rotenonone** (TAKEI), i, 761.
- Rothers's reaction**, effect of different ammonium salts in (VAN URK), ii, 162.
- Rottlerin**, and its acetyl and benzoyl derivatives (DUTT), i, 1296.
- Rubcene**, constitution of (PUMMERER and ULBICH), i, 1259.
- Rubidium**, spectrum of (OUDET), ii, 915.  
 arc spectrum of (MEGGERS and LAPORTE), ii, 1101.  
 flame spectrum of (BLECKER and BONGERS), ii, 77.  
 radioactivity of (HARKINS and GUY), ii, 1109.  
 low-voltage arc in vapour of (NEWMAN), ii, 829.
- Rubidium**, quantum number of (LINDSAY), ii, 467.
- Rubidium compounds**, effect on, on respiration of cells (ROFFO and NEUSCHLOSS), i, 1006.
- Rubidium chloroplatinate**, solubility of, in water (ARCHIBALD and HALLETT), ii, 652.  
 magnesium chromate, optical properties of mixed crystals of ammonium magnesium chromate and (PORTER), ii, 945.  
 hydroxide, viscosity of solutions of (FRICKE), ii, 389.  
 iodide, complex compounds of stannous iodide and (AUGER and KARANTASSIS), ii, 1182.  
 stannic iodide (AUGER and KARANTASSIS), ii, 814.
- Rubyl-3-ethosulphuric acid**, 9:6'-dihydroxy-, and its hydrochloride (GRIEMSA and BONATH), i, 291.
- Ruminants**, effect of asparagine and ammonium nitrate on nitrogen metabolism of (STARZEVSKA), i, 1115.
- Ruthenium**, valency of, and its *tetroxide* and halides (RUFF and VIDIC; KRAUSS and KÜKENTHAL), ii, 480.  
 co-ordination number of, in the chlororuthenates (BRIGGS), ii, 703.
- Ruthenium bases** (*ruthenium amines*):  
*Rutheniumammine* (AOYAMA), ii, 816.
- Ruthenium chloride** (WÖHLER and BALZ), ii, 424.  
*pentaffluoride* (RUFF and VIDIC), ii, 443.  
*trihalides*, compounds of carbon monoxide with (MANCHOT and KÖNIG), ii, 149.  
 oxides (WÖHLER, BALZ, and METZ), ii, 149.
- Hexachlororuthenic acid**, ammonium and potassium salts (AOYAMA), ii, 816.
- Pentachlororuthenious acid**, potassium salt (AOYAMA), ii, 816.
- Pentachlororuthenites** (GUTBIER and NIEMANN), ii, 231.
- Tetrachlorodioxyruthenic acid** (AOYAMA), i, 816.
- Ruthenium separation**:—  
 separation of platinum and (RUFF and VIDIC), ii, 443.
- Rutile**, crystal structure of (GREENWOOD), ii, 93.
- Rye**, constituents of (HOLTZ and MÜLLER), i, 483.
- Rye kernels**, constituents of (JODIDI and WÄNGLER), i, 1224.
- Rye straw**, effect of silicic acid on the growth of (WIESSMANN), i, 438.

## S.

**Saccharin** (*o*-benzoylsulphinide), derivatives of (HARDING), i, 670.

acetyl and benzoyl derivatives (HELLER, BUCHWALDT, FUCHS, KLEINICKE, and KLOSS), i, 1324.

**Saccharinic acids** (GLATTFELD and SHERMAN), i, 881.

**Safranine colouring matters** (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 591.

**Safraninedisulphonic acid** (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 592.

*apo*Safranone, 6-chloro-2-hydroxy- (KEHRMANN and SCHEDLER), i, 444.

**Safroengenol**. See 4-Ethoxyallylbenzene, 3-hydroxy-.

*iso*Safroengenol. See 4-Ethoxypropenylbenzene, 3-hydroxy-.

*n*- and *iso*-Safrones, action of magnesium methyl iodide on (KAFUKU), i, 1413.

**Salep manna**, hydrolysis of (PRINGSHEIM and GENIN), i, 214.

**Salicin**, hydrolysis of (JOSEPHSON), i, 1359.

by emulsin (BERTRAND and COMPTON), i, 738.

ethers, tetra-acetyl derivatives (ZEMPLÉN and BRAUN), i, 1081.

**Salicin**, chloro-, tetra-acetyl derivative (ZEMPLÉN and BRAUN), i, 1081.

**Salicylaldehyde**, metallic salts (ZETTSCHKE, SILBERMANN, and VIELI), i, 1411.

compound of aminomalononitrile with (GRISCHKEVITCH-TROCHIMOVSKI and SEMENOV), i, 1069.

**Salicylaldehyde**, 3:5-dibromo-, Schiff's bases and *p*-bromophenylhydrazones of (BREWSTER), i, 38.

**Salicylaldoxime** *p*-chlorophenyl ether (BAMBERGER), i, 143.

**Salicylic acid** (*o*-hydroxybenzoic acid), ionisation of, in alcohol-water mixtures (BRADLEY and LEWIS), ii, 868.

heat of combustion of, and its use as a standard (VERKADE and COOPS), ii, 39.

equilibrium of phenol, water, and (BAILEY), ii, 1064.

salts, diffusion potentials and ionic mobilities of (PRIDEAUX and CROOKS), ii, 42.

hydroxylamine salt (OESPER and BALLARD), i, 1233.

theobromine and theophyllin salts (KNOLL & Co.), i, 828.

esters, excretion, toxicity, and stability of (HANZLIK and PRESHO), i, 1501.

**Salicylic acid** (*o*-hydroxybenzoic acid), ethylene ester (CRETCHER and PITTINGER), i, 1416.

*p*-propenylphenyl ester (RIEDEL), i, 1423.

determination of, oxidimetrically (TÄUFEL and WAGNER), ii, 1008.

**Salicylic acid**, amino-, electrolytic preparation of (NORRIS and CUMMINGS), i, 668.

thio- and 5-thiocyano-, phthalidylidene ether esters (KAUFMANN and ROSSBACH), i, 1273.

5-thiol- (KAUFMANN and ROSSBACH), i, 1273.

**Salicylic acids**, substituted (KAUFMANN and ROSSBACH), i, 1273.

**Salicylosalicylic acid**, quinine salt (MERCK & Co.), i, 1448.

**Salicyluric acid**, synthesis of, in the organism (BALDONI), i, 330.

in urine (DRZIMAL), i, 99.

**$\beta$ -Salicylpropionic acid**,  $\alpha$ -cyano- (BAKER and LAPWORTH), i, 30.

**Saligenin**, esters and ethers, anæsthetic and anti-spasmodic action of (JENSEN and HIRSCHFELDER), i, 467.

**Saliva**, effect of halides and other substances on the diastatic activity of (CLIFFORD; WALKER), i, 738.

calculus from (PETROT), i, 725.

**Salivary glands**, formation of lactic and phosphoric acids in (SCHMITZ and CHROMETZKA), i, 859.

"**Saluten**," effect of, in syphilis (BERING), i, 358.

**Salts**, emission of particles by heated (SCHMIDT), ii, 251.

corpusecular radiation from (VOLMER), ii, 7.

electrolysis of equimolar mixtures of (SAXON), ii, 984.

paramagnetism of (COTTON-FREYTS), ii, 945.

heats of solution and dilution of (WÜST and LANGE), ii, 976.

solubility, heat of solution and lattice energy of (BUTLER), ii, 39.

vapour pressure of aqueous solutions of, from the depression of the freezing point of nitrobenzene (SIDGWICK and EWBANK), ii, 38.

absorption of, by tissues (STILES), ii, 31.

hygroscopicity of (SCHROORL), ii, 400.

hydration of, and their effect on the vapour pressure of water (SIDGWICK and EWBANK), ii, 38.

deliquescence of (SCHERINGA), ii, 296.

liquid-crystalline properties of acids, esters, and (VORLÄNDER), i, 267.

decomposition of, by colloids (HÜM-MELCHEN and KAPFEN), i, 218.

- Salts**, bi-bivalent, solubility of, in solutions containing a common ion (WALKER), ii, 769.  
 coloured, rhythmic precipitation of, in gels (RIEGEL and WIDGOTT), ii, 863.  
 complex, magnetic properties and valency of (WELO and BAUDISCH), ii, 1031.  
 fused, boiling point of (LORENZ and HERZ), ii, 276.  
 thermal expansion of (LORENZ and HERZ), ii, 950.  
 equilibria in (JELLINEK and WOLFF), ii, 974; (JELLINEK), ii, 1160.  
 equilibria of metals with (LORENZ), ii, 536, 537.  
 polyatomic, dissociation of (SASAKI), ii, 399.  
 solid, electrical conductivity of, at high temperatures (VAILLANT), ii, 40.  
 uni-univalent, conductivity of, in methyl alcohol (FRAZER and HARTLEY), ii, 1163.  
 See also Metallic salts.  
**Salt solutions**, effect of capillary-active substances on the surface tension of (SEITH), ii, 961.  
 mixed, solubility and heats of solution of (MONDAIN-MONVAL), ii, 654.  
**Salt vapours**, ionisation of (KONDRA-TEEV), ii, 615.  
**Salting-out effect** (LINDERSTRÖM-LANG), ii, 30; (HAFNER and KÜRTHY), ii, 283.  
**Salvarsan** (*arsphenamine*), isoelectric point of (HUNTER and PATRICK), i, 1106.  
 sulphur content of, and its synthesis and toxicity (CHRISTIANSEN, NORTON, and SHOHAN), i, 1471.  
 and its derivatives, distribution of arsenic in the body after injection of (FORDYCE, ROSEN, and MYERS), i, 189.  
 action of, *in vitro* and *in vivo* (SCHUMACHER), i, 733.  
 silver compound of (MYERS and CORBITT; CORNWALL and MYERS; FORDYCE, ROSEN, and MYERS), i, 611.  
 and its derivatives (BINZ, BAUSCH, and URSCHAT), i, 1195.  
 determination of arsenic in (KIRCHER and v. RUPPERT), ii, 240.  
**Samarium**, Röntgen ray spectrum of (GLEDITCH and BOTOLFSSEN), ii, 612.  
**Sand cultures**, effect of silica on the yield of plants in (DUCHON; LEM-MERMANN), i, 767.  
**Sandstone**, weathering of (KLANDER), ii, 821.  
**Sanguinarine** (GADAMER and STICHEL), i, 286.  
**Santonin**, action of, on blood sugar (STASIAK), i, 1501.  
*desmotropo*Santonin, action of iodine on (BERTOLO), i, 546.  
*Sapindus mukorossi* and *saponaria*, saponenin from (JACOBS), i, 1028.  
**Sapogenin**, and its derivatives, from soap nuts (JACOBS), i, 947.  
**Saponins** (VAN DER HAAR), i, 50, 946; (JACOBS), i, 947, 948, 1028.  
 dialysis of (KOFLER and WOLKENBERG), i, 1519.  
 toxicity of, and their detoxication by cholesterol (KOFLER and SCHRUTKA), i, 1501.  
**Sarcosine**, preparation of the ester of (STAUDT), i, 1133.  
 anhydride (ABDERHALDEN and KOMM), i, 175.  
*Scabiosa succisa*, constituents of leaves of (WATTIEZ), i, 1521.  
**Scandium**, spectrum of (CATALÁN), ii, 724.  
 magnetic resolution of the spectrum of (GOUTSMIT, VAN DER MARK, and ZEEMAN), ii, 912.  
 arc spectrum of (PIÑA DE RUBIES), ii, 829.  
 arc and spark spectra of (MEGGERS), ii, 77.  
 ultra-violet spark spectrum of (IRETON), ii, 453.  
**Scandium carbide** (FRIEDERICH and SITTIG), ii, 705.  
 nitride (FRIEDERICH), ii, 374; (FRIEDERICH and SITTIG), ii, 420.  
**Schiff's bases**, bromine additive compounds of (BERG), i, 817.  
**Schoepite**, structure and analysis of (SCHOEPF), ii, 235.  
**Scleroproteins** (STARY and ANDRAT-SCHKE), i, 1480.  
**Scopolamine N-oxide**, and its derivatives (POLONOVSKI and POLONOVSKI), i, 829.  
*Scopolia*, sterol from roots of (WINDAUS and BRUNKEN), i, 108.  
**Scurvy** (LIOTTA), i, 1365.  
 biochemistry of (PALLADIN; PALLADIN and KUDRIZJEVA), i, 330.  
 calcium and creatine excretion and enzymes of blood in (PALLADIN and KUDRIZJEVA; PALLADIN and NORMARK; PALLADIN and SAVRON), i, 461.  
 iron in blood in (MOURIGNAND, LEULIER, and MICHEL), i, 330.  
 blood of guinea-pigs with (LEPPER and ZILVA), i, 1208.  
*Scymnus lichæ*, hydrocarbons from (ANDRÉ and CANAL), i, 1373.

**Sea water.** See under Water.

**Seal, blood of.** See Blood.

**Secretin and insulin** (PENAU and SIMONNET), i, 482.

**Sedimentation**, recorder for measuring distribution of particles in (LAMBERT and WIGHTMAN), ii, 1194.

**Seeds**, hydrogen-ion concentration in (NÉMEC), i, 871.

effect of, on hydrogen-ion concentration and reaction of nutrient solutions (RUDOLFS; HOAGLAND), i, 1368.

selective adsorption of ions by (RUDOLFS), i, 1367.

symbiosis of bacteria and (FOWLER and CHRISTIE), i, 344.

germination of (BLAGOVESHENSKI; FODOR and REIFENBERG), i, 756.

effect of carbon dioxide on (SCHMIDT), i, 758.

action of photocatalysers on (NEITHAMMER), i, 1023.

effect of water and salt solutions on (RUDOLFS), i, 1120.

formation of vitamin-A during (STEPP), i, 1220.

dried, peroxydases in (COUPIN), i, 615.

germinating, alkaloids in (SABALIT-SOHA and JUNGERMANN), i, 1223.

oxidation of amino-acids in (OPARIN), i, 1518.

formation of vitamin-D in (STEPP), i, 1221.

**Selenium**, atomic weight of (BRUYLANTS, LAFORTUNE, and VERBRUGGEN), ii, 174.

photo-electric emission of (DEL REGNO), ii, 81.

effect of light on the thermoelectric power of (HOLMES), ii, 811.

effect of light on thermal conductivity of (MARTIN), ii, 1117.

crystal structure of (SLATTERY), ii, 369.

optical constants of crystals of (MILLER), ii, 751.

hydrosols, coagulation of, by electrolytes (DOOLAN), ii, 293.

as carrier in chlorination (O. and C. A. SILBERRAD), ii, 1191.

**Selenium compounds**, acid nature of (KARVE), ii, 1188.

effect of, on respiration of cells (ROFFO and NEUSCHLOSS), i, 1006.

**Selenium bromide and chloride**, preparation of (LENHER and KAO), ii, 867.

electrical conductivity of solutions of (JULIEN), ii, 872.

**Selenium dioxide**, molecular weight of, in ethyl alcohol (PRIDEAUX and GREEN), ii, 96.

additive compounds of, with halogen acids (MUEHLBERGER and LENHER), ii, 890.

**Selenious acid**, dissociation constants of (WILCOX and PRIDEAUX), ii, 867.

**Selenic acid**, and its salts (LENHER and WECHTER), ii, 815; (LENHER and KAO), ii, 817.

preparation of (MANCHOT and WIRZ-MÜLLER), ii, 819.

**Selenates**, double hydrated, dissociation pressures of (FERGUSON), ii, 1063.

**Selenides**, preparation of (MOSER and ATYNSKI), ii, 583.

electrolytic preparation of (FISCHER), ii, 808.

**Selenium determination and separation:**—

determination of, and separation from tellurium (LENHER and KAO), ii, 434.

separation of tellurium and (LENHER and KAO), ii, 1199.

**Selenocyanogen** (BROCKENBACH and KELLERMANN), ii, 569.

*Senecarpus anacardium* (marking nut), constituents of (NAIDU), i, 1224.

**Semen**, spermine phosphate from (ROSENHEIM), i, 180.

**Semicarbazide sulphate**, electrolytic preparation of (BIRCHER, INGERSOLL, ARMENDT, and COOK), i, 525.

**Semicarbazide**, thio-, action of aromatic amines on (MAZOUREVITSCH), i, 984.

condensation of  $\omega$ -bromoacetophenone with (BOSE), i, 167.

**Semicarbazides**, thio-, condensation of  $\omega$ -bromoacetophenone with (BOSE), i, 1465.

**Semicarbazones**, action of amines on (WILSON and CRAWFORD), i, 318.

action of hydrazines on (SUTHERLAND and WILSON), i, 42.

**Semioxamazine**, derivatives of (WILSON and PICKERING), i, 935.

**Semitruxinonic acid**, and its derivatives (STOERMER and KLOCKMANN), i, 928.

**Sera**, antimeningococcal, flocculation of (DE LA RIVIERE and ROUX), i, 749.

normal and luetic, chemical composition of (SOLARI), i, 858.

**Sericin**, preparation of, from silk (SHELTON and JOHNSON), i, 602.

*dl*-Serine, derivatives of (BERGMANN and MIERLEY), i, 235.

- Serum**, effect of irradiation on (KROETZ), i, 178.  
 electrical conductivity of (LASSEUR, GIRARDET, and VERMELIN), i, 853.  
 effect of alcohols or acetone on physical properties of (FÜRTH and PECHOLD), ii, 1056.  
 complement activity of (WHITEHEAD, GORDON, and WORMALL), i, 1202.  
 solubility of the globulins of (SÖRENSEN), i, 1110.  
 proteins of (LEENDERTZ), i, 96.  
 precipitation of (CSAPÓ and v. KLOBUSITZKY), i, 178; (RUSZCZYŃSKI), i, 322.  
 precipitin reactions of (HEKTOEN and WELKER), i, 323.  
 calcium content of (CSAPÓ and FAUBL), i, 96.  
 in children, acid-combining power of (BOSÁNYI and CSAPÓ), i, 188.  
 determination of phosphates in (ESSINGER and GYÖRGY), i, 178.  
 determination of sodium in (KRAMER and GITTLEMAN), i, 180.
- Serum-albumin**. See under Albumin.
- Sesquiterpene**,  $C_{15}H_{24}$ , and its hydrochloride from *Canarium strictum* (MOUDGILL), i, 823.
- Sesquiterpenes**, from extracts of the cotton plant (POWER and CHESNUT), i, 1026.  
 ring formation in (RUZICKA and CAPATO), i, 948.  
 action of formic acid on (ROBERTSON, KERR, and HENDERSON), i, 1293.
- Shaking apparatus** (MILLIGAN), ii, 150.
- Shale oil**, Kimmeridge, sulphur compounds of (CHALLENGER, JINKS, and HASLAM), i, 282.
- Shark liver oil**, higher alcohols of (TOYAMA), i, 4.
- Sheep**, bile of. See Bile.  
 excretion of creatine and creatinine by (PALLADIN), i, 327.
- Shibuiol**, constitution of (KOMATSU and MATSUNAMI), i, 950.
- Shrimp**. See *Peneus setiferus*.
- Silage**, composition of, and its value as a farm food (BLACKSHAW), i, 1523.
- Silane**, formation of (SCHWARZ and (HOEFER), ii, 418.
- Silox**, hydrocarbons and carbonates in (DE LAPPARENT), ii, 821.
- Silica**. See Silicon dioxide.
- Silicododecatungstic acid**, and its salts (NORTH and BEAL), ii, 607.
- Silicohydrocarbons**, complex (KIPPING), i, 87.
- Silicon**, atomic weight of (HÖNIGSCHMID and STEINHEIL), ii, 174.  
 spectra of (McLENNAN and SHAVER; FOWLER), ii, 452; (LANG and SMITH), ii, 829; (McQUARRIE), ii, 1013.  
 singly ionised, spectrum of (SAHA), ii, 1100.  
 spectral frequencies of (HOLWECK), ii, 336.  
 critical potential of (HOLWECK), ii, 729.  
 radio detector action of (CZOCZRAŁSKI), ii, 642.  
 sizes of electron-kernels of aluminium, magnesium, sodium, and (TURNER), ii, 349.
- Silicon alloys** with aluminium (PARAVANO and SCORTECCI), ii, 281.  
 with carbon and iron (BECKER), ii, 973.  
 with molybdenum and nickel (PFAUTSCH), ii, 298.
- Silicon nitride**, spectrum of (MULLIKEN), ii, 731, 1020.
- dioxide (silica)**, phosphorescence of, exposed to Röntgen rays (HOPWOOD and MAYNEORD), ii, 839.  
 effect of temperature on the hygroscopicity of (AARNIO), ii, 1157.  
 adsorption of acids by (JONES), ii, 382, 509; (MUKHERJEE), ii, 383, 962.  
 gels, adsorption by (RAY), ii, 191; (PATRICK and JONES), ii, 193; (PATRICK and OPDYCKE), ii, 666.  
 adsorption of butane by (PATRICK and LONG), ii, 382.  
 adsorption of gases by (PATRICK), ii, 509.  
 adsorption of water by (PATRICK and EBERMAN), ii, 284.  
 heats of adsorption of sulphur dioxide and of water vapour by (PATRICK and GREIDER), ii, 870.  
 effect of water on dried and pressed (BHATNAGAR, PRASAD, and OHRI), ii, 966.  
 reducing action of hydrogen adsorbed by (LATHSHAW and REYERSON), ii, 412.  
 new type of (HOLMES and ANDERSON), ii, 518.
- equilibrium of calcium and sodium metasilicates** and (MOREY and BOWEN), ii, 1161.
- equilibrium of sodium metasilicate** with (MORLEY and BOWEN), ii, 121.
- polymorphism of** (LONGCHAMON), ii, 752.
- possible dynamic form of** (v. WEIMARN), ii, 395.

- Silicon dioxide (silica)**, action of, on electrolytes (JOSEPH), ii, 383.  
 reactions of metals and gases on vessels of (V. WARTENBERG), ii, 699.  
 surface devitrification of vessels of (VILBRANDT), ii, 1091.  
 rôle of, in plant growth (NANJI and SHAW), i, 214; (LEMMERMANN, WIESSMANN, and SAMMET), i, 766; (DUCHON; LEMMERMANN; DENSCH), i, 767.
- Silicic acid gels**, preparation and properties of (FELLS and FIRTH), ii, 390.  
 sols (PAULI and VALKÓ), ii, 521; (KRUYT and POSTMA), ii, 861.  
 preparation of (GRUNDMANN), ii, 775.  
 effect of, on plant growth and soils (WIESSMANN; NOLTE; MUKHERJEE), i, 488.
- Silicic acid**, detection of (LORENZ and BERGHEIMER), ii, 600.
- Silicic acids** (SCHWARZ and MENNER), ii, 222.
- Silicates** (EITEL; TAMMANN and GREVEMEYER), ii, 580.  
 structure of (DOMINKIEWICZ), ii, 1036.  
 properties and uses of sols and gels of (VAIL), ii, 661.  
 colloidal, oxydase-like activity of (OTA and NODA), ii, 203.  
 fused, behaviour of gold and platinum with (JANDER), ii, 416.  
 mineral, constitution of (ISKYUL), ii, 152.  
 natural, constitution of (RIDLEY), ii, 1130.  
 determination of ferric iron in (HACKL), ii, 1004.  
 separation of alkalis in analysis of (CANTONI), ii, 1001.
- Silicon organic compounds** (KIPPING), i, 87; (VYLE and KIPPING), i, 172.
- Silk**, use of, in the animal organism (ARDERHALDEN), i, 726.  
 weighting of, with stannic chloride (RICHTER and REICHAERT), ii, 193.  
 viscose, plasticity of (VENABLE), ii, 1058.
- Silk fibroin**, distillation of (JOHNSON and DASCHAVSKY), i, 176.  
 hydrolysis of the peptone of (HATANAO), i, 201.  
 tryptophan from (HIRATSUKA), i, 836.
- Simanite**, formation of mullite from (GRIFFITH), ii, 287.  
 crystal structure of mullite and (NATHAN and DAVEY), ii, 1127.
- Siloxen**, reaction of halogen compounds with (KAUTSKY and THIELE), ii, 668.
- Silver**, atomic weight of (DEAN), ii, 255; (MOLES), ii, 346.  
 $K_H$  absorption in spectrum of (RICHTMYER and SPENCER), ii, 1102.  
 arc spectrum of (LOWERY), ii, 4; (SHENSTONE), ii, 453; (BENGTSOON and SVENSSON), ii, 166.  
 spark spectrum of (L. and E. BLOCH), ii, 829.  
 ultra-violet absorption spectrum of (ZUMSTEIN), ii, 453.  
 effect of temperature on the anomalous reflexion of (DE SÉLINCOURT), ii, 275.  
 X-ray absorption coefficient of (WARBURTON and RICHTMYER), ii, 1103.  
 photo-electric sensitivity of (SUHRMANN), ii, 831.  
 production of optical activity in (ZOCHEE and COPER), ii, 935.  
 electro-deposition of (SANIGAR), ii, 677.  
 atoms, free path of, in nitrogen (BIELEZ), ii, 668.  
 films, emission of electrons from, exposed to Röntgen rays (SIMONS), ii, 81.  
 atomic heat of, at high temperature (MAGNUS and HODLER), ii, 95.  
 adsorption of, by hydrated manganese dioxide (PAVLOV), ii, 507.  
 partition of, between lead and zinc (NAISH), ii, 506.  
 solubility of oxygen in (PARRAVANO and MALQUORI), ii, 769, 879.  
 solubility of, in water (KREPELKA and TOUL), ii, 697.  
 ions, equilibrium of, with ferrous ions (TANANAEV), ii, 121.  
 in photography (LÜPPO-CRAMER), ii, 985.  
 colloidal, preparation of (MORÁVEK), ii, 775.  
 colour of (FEICK), ii, 1153.  
 dispersoid sols of (V. WEIMARN), ii, 198.  
 medicinal preparations of (SCHLEE and THIESSENHUSEN), i, 197; ii, 114.  
 sols, protected, preparation and properties of (GARARD and DUCKERS), ii, 391.  
 analysis and constitution of (FRIED and PAULI), ii, 390.  
 action of arsenious sulphide sols on (FREUNDLICH and MOOR), ii, 198.

- Silver alloys**, effect of various metals on the properties of (SABTEL and SACHS), ii, 1051.
- with cadmium, electro-deposition of (ATEN and VAN PUTTEN), ii, 1166.
- with lead, electrolysis of (KREMANN and BENDA), ii, 679.
- with mercury (TAMMANN and STASSFURTH), ii, 377.
- with mercury and tin (TAMMANN and DAHL), ii, 502.
- with zinc, Röntgen ray analysis of (WESTGREN and PHRAGMÉN), ii, 746.
- Silver salts**, therapeutic properties of (V. NEERGAARD), i, 1212, 1357.
- Silver azide**, action of bromine on (SPENCER), ii, 416.
- arsenate and phosphate, crystal structure of (WYCKOFF), ii, 1037.
- uranyl carbonate (HEDVALL), ii, 991.
- bismuthide (WEEKS and DRUCE), ii, 1188.
- bromide, ultra-violet light required to develop (HELMICK), ii, 143.
- photographic emulsions of, and the action of light (BAKER; LÜPP-CRAMER; STOCK), ii, 574.
- photochemical decomposition of (HARTUNG), ii, 57.
- carbonate, thermal decomposition of (CENTNERSZWER and BRUŽS), ii, 803.
- perchlorate, compounds of pyridine, water, and (MACY), ii, 536.
- chloride, solubility of, in chloride solutions (KENDALL and SLOAN), ii, 1052.
- mixed crystals of sodium chloride and (LE BLANC and RÖSSLER), ii, 365; (BROOME; TAMMANN), ii, 366.
- gelatino-halides, properties of (REYCHLER), ii, 219.
- halides, photoelectric properties of (AUDUBERT), ii, 56.
- photomagnetic properties of (GARRISON), ii, 371.
- photochemistry of emulsions of (EGGERT and NODDACK), ii, 573.
- change in mass of, on illumination (KOCH and KREISS), ii, 810.
- hydroxide, precipitation of, electro-metrically (BRITTON), ii, 1204.
- iodide in photo-electric cells (GARRISON), ii, 212; (PRICE), ii, 680.
- adsorption of silver salts by (BEERLEY and TAYLOR), ii, 855.
- hydrosols (LOTTERMOSER, SEIFERT, and FORSTMANN), ii, 514.
- nitrate, equilibrium of cupric hydroxide, water, and (MALQUORI), ii, 697.
- Silver oxide**, solubility of, in water (REMY and KUHLMANN), ii, 119.
- oxides (JIRSA), ii, 314.
- higher oxides of (JIRSA), ii, 1162; (JIRSA and JELINEK), ii, 1182.
- Silver organic compounds** :—
- Silver salvarsan (MYERS and CORBITT; CORNWALL and MYERS; FORDYCE, ROSEN, and MYERS), i, 611; (BINZ, BAUSCH, and URSCHAT), i, 1195.
- Silver detection, determination and separation** :—
- detection of (STEIGMANN), ii, 719.
- determination of (DOUGHTY), ii, 238.
- separation of, by irradiation of photographic plates (KOCH and VOGLER), ii, 941.
- Sinapis alba*, hexamethylenetetramine as a nutrient for (E. and G. NICOLAS), i, 623.
- Sincosite** (SCHALLER), ii, 152.
- Sirius-yellow G**. See 1:2-Benzanthraquinone.
- Sitostene**, nitro- (WINDAUS and BRUNKEN), i, 394.
- Sitosterol** (WINDAUS and BRUNKEN), i, 394.
- Skatole**, determination of, in bacterial cultures (FELLERS and CLOUGH), i, 1015.
- Skin**, osmosis of boric acid through (KAHLENBERG), i, 101.
- hydrolysis of (MERRILL), i, 92.
- enzymes of (WOHLGEMUTH and KLOPSTOCK), i, 203; (WOHLGEMUTH and YAMASAKI), i, 472.
- absorption of potassium iodide by (CANALS and GIDON), i, 1116.
- extraction of proteins from (FINESS, MILLER, and ALLES), i, 331.
- substance giving the nitroprusside reaction in (KAYE), i, 180.
- Skłodowskite** (SCHOEP), ii, 235.
- Sky**, blue colour of (BUCHWALD), ii, 1117.
- Smectic compounds**, structure of (FRIEDEL), ii, 186, 272.
- Smell**, determination of thresholds of (HOFMANN and KOHLRAUSCH), i, 732.
- Soaps**, Röntgen ray structure of (TRILLAT), ii, 752.
- as protective colloids (PAPACONSTANTINOU), ii, 393, 526; (BHATNAGAR, PRASAD, and BAIHL), ii, 1155.
- calcium, solubilities of (HARRISON), ii, 190.
- Soap films**, composition of (LAING), ii, 960.
- in emulsions (RIEMAN and VAN DER MEULEN), ii, 1148.

- Soap solutions, viscosity of (YAJNIK and MALIK), ii, 779.  
 viscosity and elasticity of (FREUNDLICH and KORES), ii, 663.  
 colloidal properties of (GURVITSCH), ii, 517.  
 alcoholic, ionisation in (PATRICK, HYDEN, and MILAN), ii, 859.  
 Sodamide, syntheses with (HALLER, BAUER, and RAMART), i, 280.  
 Sodiocyclohexanone (v. AUWERS, BAHR, and FRESK), i, 309.  
 Sodium, molecular weight of (JOUNIAUX), ii, 187.  
 absorption spectrum of (HARRISON and SLATER), ii, 911.  
 K-absorption spectrum of (ROBINSON), ii, 614.  
 arc spectrum of (v. WISNIEWSKI), ii, 451.  
 at low voltages (NEWMAN), ii, 723.  
 band spectrum of, and of mixtures of the vapour with potassium vapour (SMITH), ii, 86.  
 series spectrum of the vapour of (HARRISON), ii, 5.  
 vapour, low voltage arcs in (NEWMAN), ii, 450.  
 electrical double refraction of (LADENBURG and KOPFERMANN), ii, 917.  
 inverse Stark effect in (LADENBURG), ii, 79.  
 photo-emission from (BURT), ii, 617.  
 life of excited atoms of (GERLACH and SCHÜTZ), ii, 171.  
 atoms, transition probabilities in (HARRISON), ii, 734.  
 sizes of electron-kernels of aluminium, magnesium, silicon, and (TURNER), ii, 349.  
 deposition of, by electrolysis through glass (BURT), ii, 921.  
 resonance radiation, polarisation of, in magnetic fields (ELLWITZ), ii, 628; (BREIT), ii, 629.  
 vapour pressure of (RODEBUSH and DE VRIES), ii, 1142.  
 equilibrium between alkaline earth metals and, and their fused chlorides (JELLINEK and CZERWINSKI), ii, 123.  
 ions, action of, on the heart (HOLZLÖHNER), i, 1500.  
 reaction of, with aromatic aldehydes, ketones, and esters (BLICKER), i, 37, 362.  
 interaction between potassium and, and of ammonium oxalate (HERZFELD), ii, 1202.  
 Sodium alloys with lead, electrolysis of (KREMANN, KRENZL, and MARKL), ii, 132.  
 with mercury, preparation of (READ and LUCARINI), ii, 587.  
 electrolysis of (KREMANN, MÜLLER, and KIENZL), ii, 132.  
 interfacial tension between benzene and (BHATNAGAR, PRASAD, and MUKERJI), ii, 194.  
 effect of light on the action of water with (BHATNAGAR, PRASAD, and MUKERJI), ii, 811.  
 with mercury and zinc, velocity of reaction of aqueous solutions with (KLEIN), ii, 802.  
 with potassium, electrolysis of (KREMANN and v. REHENBURG), ii, 132.  
 Sodium antimonite and sulphite, slow oxidation of (JORISSEN and VAN DEN POL), ii, 52.  
 arsenite, combination of, with loosely-combined nitrogen, oxygen, and sulphur (GUTMANN), i, 1059.  
 action of, on azido compounds (GUTMAN), i, 84.  
 reactions of, with halogen organic compounds (GUTMANN), ii, 238.  
 azide, action of bromine on (SPENCER), ii, 416.  
 borate, use of, in determination of acids and bases (MELLON and MORRIS), ii, 325.  
 carbonate, equilibrium of sodium sulphate, water, and (CASPARI), ii, 123.  
 action of, on phosphates (COLANI), ii, 1001.  
 hydrogen carbonate, dissociation of (RANO), ii, 414.  
 equilibrium of hæmoglobin and (ADAIR), i, 850.  
 potassium carbonates (BAIN), ii, 577.  
 caseinate, equilibrium of solutions of sodium chloride and (SPORING), ii, 119.  
 chloride, absorption spectrum of photo-electric crystals of (GYULAI), ii, 837.  
 photo-electric properties of crystals of (GUDDEN and POHL), ii, 343; (GYULAI), ii, 476.  
 electrical conductivity of solutions of (LORENZ and VOIGT), ii, 871.  
 activity coefficient of (SCATCHARD), ii, 897.  
 dispersion of (HERZFELD and WOLF), ii, 1119.  
 transference numbers of, and its mixtures with potassium chloride (MACINNES), ii, 872; (DREWRY), ii, 873.

- Sodium chloride**, surface tension and adsorption of aqueous solutions of (HARKINS and McLAUGHLIN), ii, 959.
- strength and elasticity of crystals of (JOFFÉ and LEWITSKY), ii, 370; (EWALD and PÓLÁNYI), ii, 371.
- mixed crystals of silver chloride and (LE BLANC and RÖSSLER), ii, 365; (BROOMÉ; TAMMANN), ii, 366.
- equilibrium of magnesium sulphate with (KURNAKOV and SHEMTSCHUSHNI), ii, 299.
- equilibrium of solutions of sodium caseinate and (SPORING), ii, 119.
- equilibria of sodium palmitate, water, and (McBAIN and LANGDON), ii, 537.
- equilibrium of sodium sulphate, water, and (PELLING), ii, 670.
- interaction of alumina and (CLEWS), ii, 577.
- effect of, on solutions of chromic chloride (GUSTAVSON), ii, 1086.
- See also Rock salt.
- dichromate**, reaction of potassium chloride with (ROBERTSON), ii, 121.
- dithionate**, detection and determination of (LITTELSCHIED and LÖWENHEIM), ii, 68.
- hydroxide**, activity coefficient of (HARNED), ii, 397, 398.
- fused, electrical conductivity of (ARNIT and PLOETZ), ii, 127.
- solubility of cellulose in (D'ANS and JÄGER), i, 1387.
- equilibrium of chromium hydroxide, chromite, and (MÜLLER), ii, 124.
- equilibrium of lead hydroxide, plumbite, and (MÜLLER, REISSMANN, and BALLIN), ii, 125.
- equilibrium of sodium sulphite, water, and (HAMMICK and CURRIE), ii, 869.
- hypochlorite**, induced antiseptic action of (VARILLA and TCHOUEVRES), i, 863.
- hyposulphite**, reducing action of, on dyed cotton (EYMER), ii, 582.
- use of, in organic analysis (CLARK), ii, 332.
- nitrate, equilibrium of sodium sulphate, water, and (FOOTE), ii, 786.
- nitrite, freezing point curve of aqueous solutions of (HELBERG), ii, 971.
- rhodizonate**, detection of barium, lead, and strontium with (KOLTHOFF), ii, 1095.
- silicates**, aqueous solutions of (HARMAN), ii, 1065.
- Sodium aluminium silicate**, crystalline forms of (BOWEN and GREIG), ii, 997.
- chromosilicate, synthesis of (KARFIOL), ii, 1087.
- metasilicate, equilibrium of silica with (MOREY and BOWEN), ii, 121.
- equilibrium of silica, calcium metasilicate, and (MOREY and BOWEN), ii, 1161.
- sulphate as a cryoscopic solvent (TURNER and PATTERSON), ii, 273.
- equilibrium of sodium carbonate, water, and (CASPARI), ii, 123.
- equilibrium of sodium chloride, water, and (PELLING), ii, 670.
- equilibrium of sodium nitrate, water, and (FOOTE), ii, 786.
- double decomposition of ammonium borate and (SBORGI and BOVALINI), ii, 206; (SBORGI, BOVALINI, and MEDICI; SBORGI), ii, 207.
- monosulphide**, crystal structure of (CLAASSEN), ii, 545.
- tetrasulphide**, action of, on organic halides (THOMAS and RIDING), i, 113.
- sulphides, behaviour of, in water and alcohol (HODGSON), i, 1104.
- reactions of, with chloronitrobenzenes (HODGSON and WILSON), i, 532.
- sulphite** (FOERSTER, BROSCHE, and NORBERG-SCHULZ), ii, 120.
- equilibrium of sodium hydroxide, water, and (HAMMICK and CURRIE), ii, 869.
- thiosulphate**, keeping properties of standard solutions of (COLLARD), ii, 1168.
- catalysis of the reaction of ferric chloride with (HOLLUTA and MARTINI), ii, 215.
- tungstate**, equilibria of, with lithium tungstate and tungsten trioxide (VAN LIEMPT), ii, 421.
- Sodium organic compounds** :—
- Sodium diethyl phosphite** (NYLÉN), i, 1135.
- Sodium detection, determination, and separation** :—
- detection of, as oxalate (WINKLER), ii, 1095.
- determination of (v. DEHN), i, 855.
- determination of, iodometrically (BÁLINT), ii, 158.
- determination of, in aluminium (FAIRLIE and BROOK), ii, 241.
- determination of, in blood (HADEN), i, 1112.
- determination of, iodometrically, in serum (KRAMER and GITTLEMAN), i, 180.

**Sodium detection, determination, and separation:—**

determination of, in blood serum (LEDERMANN), i, 324.

determination and separation of (SMITH and ROSS), ii, 601.

**Soils, mechanical composition curves of (ROBINSON), i, 224.**

physical properties of (HAINES), i, 876.

heat of wetting of (BOUYOUCOS), i, 1228.

influence of bases on (PATE), i, 1528.

heat of wetting of colloids in (ANDERSON), i, 219.

relation between vapour pressure and water content of (PURI, CROWTHER, and KEEN), i, 492.

acidity of (KAPPEN), i, 221, 874; (DENSCH), i, 221; (TACKER; RAMANN), i, 875; (KURCKMANN), i, 1032; (HISSINK and VAN DER SPEK; NIKLAS and HOCK; BOBKO and DRUSCHININ; ARRHENIUS), i, 1525.

effect of drying on (ROST and FIEGER), i, 948.

effect of silicic acid on (MUKHERJEE), i, 488.

in relation to base exchange (ROBINSON and WILLIAMS), i, 222.

effect of, on absorption of phosphorus and potassium from (NEMEC and GRACANIN), i, 1228.

relation between the hydrogen-ion concentration, lime requirement, and thiocyanate colour of (SAINT), i, 220.

effect of hydrogen-ion concentration on micro-organisms in (RIPPEL), i, 220.

reaction of (CROWTHER), i, 875; (CROWTHER and MARTIN), i, 876.

alkalinity in relation to lithological constitution of (PRATOLONGO), i, 874.

base exchange in (HISSINK), i, 222.

adsorption of ammonium chloride by (PAYLOV), ii, 287.

adsorption of anions from solutions by (COMBER), i, 219.

adsorption of colouring matters by (WILKINSON and HOFF), i, 1227.

moisture in (McCOOL and WEIDEMANN), i, 1527.

saturation capacity of (HISSINK), i, 490.

fixation of water in (WIEGNER, CALLEY, and GESSNER), ii, 86.

percolation of water through (WINTERS), i, 1527.

**Soils, dispersion of, when shaken with water (PURI and KEEN), i, 768.**

relation of biological processes to concentration of cations in (BURD), i, 1527.

cation of dilute acids on (PURI), i, 1372.

aluminium in (MAGISTAD), i, 1371.

displacement of aluminium by potassium in (SMOLIK), i, 1032.

volatilisation of ammonia from (CLARKE and MORISON), i, 491.

ammonification of amino-nitrogen in (GUITTONNEAU), i, 106.

action of calcium carbonate on (GEHRING and WEHRMANN), i, 1031.

formation of carbon dioxide in (LEMMERMANN and WIESSMANN), i, 348; (REINAU), i, 1526.

clays as colloids in (JOSEPH), i, 1228.

colloids in (ROBINSON and HOLMES), i, 624; (POWELL), i, 1032.

in relation to fertility (JOFFE and McLEAN), i, 1372.

lime requirements of (ARRHENIUS), i, 490, 766; (CROWTHER and MARTIN), i, 876; (NIKLAS and HOCK), i, 1526.

interactions of lime in (SCHEFFER), i, 624.

lime and calcium carbonate in (RAMANN; BLANCK and LOHMANN), i, 223; (BLANCK and SCHEFFER), i, 491.

occurrence of metals in (McHARGUE), i, 1023.

formation of nitrates in (RUSSEL, JONES, and BAHRT), i, 1031.

fixation of nitrogen in (VINOGRADSKI), i, 628; (WINTERS), i, 767; (TRUFFAUT and BEZSSONOFF), i, 1227.

accumulation of nitrates in, after growth of clover or lucerne (LYON, BIZZELL, and WILSON), i, 347.

phosphorus requirements of (VAN DER SPUIJ), i, 1524.

availability of phosphorus in (AMES and SCHOLLENBERG), i, 1524.

addition of phosphorus nitride to (ALLISON), i, 218.

potassium salts in (AMES and SIMON; FRAPS), i, 1523.

effect of sodium nitrate in (ANON.), i, 347.

effect of addition of straw to (MARTIN), i, 1372.

sulphofication in (KALUSHSKI), i, 492.

sulphur as a fertiliser for (KALUSHSKI), i, 492.

urea in (BRIOUX), i, 491; (COUTURIER and PERRAUD), i, 765.

- Soils**, decomposition of urea in (LIT-  
TAUER), i, 218.  
microbiology of (VINOGRADSKI), i,  
765.  
inoculation of, with *Azotobacter* (LIP-  
MAN and TEAKLE), i, 491.  
effect of alkali salts on bacteria in  
(GIBBS, BATCHELOR, and MAGNU-  
SON), i, 1030.  
effect of micro-organisms on absorp-  
tion in (STOKLASA), i, 765.  
formation of thiosulphates in, by  
micro-organisms (GUITTONNEAU),  
i, 766.  
effect of carbon dioxide in air of, on  
growth of plants (PARKER), i,  
1223.  
formation and decomposition of humus  
in (BALKS), i, 1031.  
effect of removing soluble humus from  
(CROWTHER), i, 1372.  
humification of organic matter in  
(ROBINSON and JONES), i, 491.  
arable, occurrence of cobalt and nickel  
in (BERTRAND and MOKRAG-  
NATZ), i, 492.  
manganese in (BERTRAND), i, 223.  
Burma, buffer action of (CHARLTON),  
i, 768.  
clay, electrical charge on colloids in  
(DAYHUFF and HOAGLAND), i, 219.  
forest, air capacity and acidity of  
(KVAPIL and NĚMEC), i, 221.  
"Hager" (KNICKMANN and HELBIG),  
i, 1528.  
limed, retention of sulphates by  
(MACINTYRE and SHAW), i, 490.  
marsh, hydrogen peroxide catalase in  
(SMOLIK), i, 1524.  
moor, acidity of (ARND), i, 221.  
effect of humic acids on bacteria in  
(ARND), i, 490.  
prairie, effect of grain growing on  
nitrogen and organic matter in  
(SHUTT), i, 768.  
Punjab, fixation of nitrogen in (LAU-  
DER and ALI), i, 1524.  
Rothamsted, base exchange in (PAGE  
and WILLIAMS), i, 222.  
saline, effect of sulphur on (KALUSH-  
SKI and SOLNIJEVA), i, 624.  
analysis of (MCGEORGE), i, 348;  
(GEDROITZ), i, 489.  
determination of acidity of (HAGER),  
i, 489; (ARND), i, 490; (NIKLAS  
and HOCK), i, 768.  
determination of alkali in (JOSEPH,  
MARTIN, and HANCOCK), i, 222.  
determination of ammonia in (MCLEAN  
and ROBINSON; HARPER), i, 224.  
determination of colloids in (BOUYOU-  
COS), i, 348.
- Soils**, determination of hydrogen-ion  
concentration in (ATKINS; BAR-  
NETTE, HISSINK, and VAN DER  
SPEK), i, 220; (NIKLAS and  
HOCK), i, 348, 1526; ii, 325;  
(ARRHENIUS), i, 1525; (PIERRE),  
i, 1526.  
apparatus for (TRÉNEL), i, 874.  
with quinhydrone electrodes  
(BRIOUX and PIEN), i, 1227.  
inhibition of bumping in determin-  
ation of nitrogen in (HANCE), i,  
1032.  
determination of nutritive require-  
ments of (DENSCH and PFAFF), i,  
1371.  
determination of sulphur in (WOL-  
KOFF), i, 224.
- Soil solution**, composition of (MARTIN  
and BURD), i, 1526, 1527.
- Soja beans**, culture of plants of (GINS-  
BURG), i, 1121.  
constituents of, and the iodine number  
of their oil (ANON.), i, 346.  
oxidising enzymes in (NITZESCU and  
COSMA), i, 471.  
lecithin and cephalin of (LEVENE and  
ROLF), i, 437.  
urease from, and its hydrolytic action  
(TAUBMANN), i, 744.
- Sols**, orientation of particles in (ZOCHEK),  
ii, 966.
- Solids**, properties and structure of  
(FRIEDERICH), ii, 374.  
fluorescence of (GYEMANT), ii, 13.  
electrification by friction between  
gases and (PERUCCA), ii, 1028.  
specific inductive capacity of (ERRERA),  
ii, 362.  
corresponding temperatures for (BROD-  
SKY; LAFUMA), ii, 26.  
contraction constants of (BALANDIN),  
ii, 637.  
contraction regularities in the form-  
ation of compound (SASLAVSKY), ii,  
933.  
angles of contact and polarity of  
surfaces of (ADAM and JESSOP), ii,  
962.  
internal pressure of (RICHARDS), ii, 362.  
solution of, in liquid surfaces (VOLMER  
and MAHNERT), ii, 508.  
rôle of water in (BALAREFF), ii, 409.  
velocity of dissociation of (CENT-  
NERSZWER and BRUŽS), ii, 685.  
reactivity of (HEDVALL), ii, 125;  
(HEDVALL and HEUBERGER), ii,  
306.  
reactions of (BALAREFF), ii, 895.  
binary, density of (PANICHI), ii, 493.  
incandescent, photoelectric action of  
light from (BECKER), ii, 1107.

**Solid state**, complexity of (SMITS and SCHOENMAKER), ii, 267; (SMITS and RUTGERS), ii, 268.

**Solid solutions**. See **Solutions**, solid.

**Solubility**, determination of, at high pressures (COHEN and VAN DER BOSCH), ii, 283.

apparatus for determination of (COHEN, DE MEESTER, and MOESVELD), ii, 151.

heat of solution and lattice energy of salts (BUTLER), ii, 39.

influence of pressure on (COHEN, DE MEESTER, and MOESVELD), ii, 852.

influence of salts on (v. EULER and RUDBERG), ii, 207.

of ampholytes (v. EULER and RUDBERG), ii, 853.

of isomerides (JOHNSTON; ANDREWS, KOHMAN, and JOHNSTON), ii, 852; (ANDREWS; KOHMAN), ii, 1052; (KOHMAN and ANDREWS), ii, 1053.

in mixed liquids (PLEUGER), ii, 283.

of bi-bivalent salts in solutions containing a common ion (WALKER), ii, 769.

**Solubility** of sparingly soluble substances (REMY and KUHLMANN), ii, 30, 119.

maximum, conditions of (COLSON), ii, 37.

**Solutes**, ionised, interionic attraction theory of (NOYES and BAXTER; DEBYE and PAULING), ii, 970.

**Solution**, contraction of volume on (RAKSHIT), ii, 238.

**Solutions**, potential differences of, at the boundaries of (FRICKE and ROHMANN), ii, 41.

electrons in (PISARSHEVSKI), ii, 210.

of low dielectric constant, electrolytes in (GROSS and HALPERN), ii, 1162.

specific heat of (DE KOLOSOVSKI), ii, 870.

effect of viscosity on (DE KOLOSOVSKI), ii, 653.

viscosity of (DE KOLOSOVSKI), ii, 765.

compressibility of (KAR), ii, 970.

deviations of, from van't Hoff's law (SWIENTOSLAWSKI), ii, 388.

hydrate theory of (TAYLOR), ii, 858.

molecular contraction in (RAKSHIT), ii, 765.

interaction in (ADAM and JESSOP), ii, 772.

expression for reaction of (GIRIBALDO), ii, 325.

velocity of bimolecular reactions in (CHRISTIANSEN), ii, 47.

adsorption surfaces of (SCHOFIELD and REED), ii, 960.

**Solutions**, spectroscopic determination of complexes in (JOB), ii, 389.

aqueous, absorption of ultra-violet light by (GRIEVESON), ii, 472.

specific heat of (RICHARDS and GUCKER), ii, 848.

effect of temperature on the internal friction and conductivity of (WIEN), ii, 931.

dimensions of ions in (JABŁCZYŃSKI), ii, 33.

determination of complex salts or ions in (PATTERSON and DUCKETT), ii, 389.

of strong electrolytes, theory of (HÜCKEL), ii, 513.

effect of temperature on dielectric constants of (KOCKEL), ii, 932.

surface tensions of, against oils (HOWARD and SOLLMAN), ii, 109.

dilute, electrical conductivity of (REMY), ii, 299.

very dilute, ultra-violet adsorption spectra of (SUHRMANN and HUPPERT), ii, 773.

non-aqueous, electrochemistry of (MÜLLER, HÖLZL, KNAUS, PLANISZIG, and PRETT), ii, 133; (MÜLLER, HÖNIG, and KONETSOHNIGG), ii, 134; (MÜLLER, PINTER, and PRETT), ii, 882.

decomposition potentials of (FINKELSTEIN), ii, 546.

ultrafiltration of (BECHHOLD and SZIDON), ii, 529.

of non-volatile solutes, vapour pressure of (MALI), ii, 850.

sensitive, apparatus for evaporation of (SCHMALFUSS and KALLE), ii, 320.

solid (BRUNI and LEVI), ii, 281; (BRUNI), ii, 380.

theory of (LASAREV), ii, 1144.

electrical conductivity of (CUI), ii, 378.

standard, preparation of (PREGL), ii, 998.

supersaturated (FISCHER), ii, 853.

true, structure of (v. WEIMARN), ii, 1055.

**Solvents**, theory of systems of (GERMANN), ii, 1143.

influence of, on rotatory power (LUCAS), ii, 742.

selective action of (WRIGHT), ii, 1144.

distribution of a solute between (SCHULZ), ii, 956.

mixed, velocity of reaction in (JONES, McCOMBIE, and SCARBOROUGH), ii, 137; (McCOMBIE, ROBERTS, and SCARBOROUGH), ii, 554.

organic, solubilities of metallic salts in (MÜLLER), ii, 380.

- Somatoid forms** (KOHLSCHÜTTER and Ege), ii, 1035.
- d*-Sorbitol**, oxidation of, with bromine water (TALEN), i, 1382.
- Sorbose**, formation of, from formaldehyde (KÜSTER and SCHODER), i, 366.
- d*-Sorbose**, preparation of, by oxidation of *d*-sorbitol (TALEN), i, 1382.
- Sound**, velocity of, in liquids and their heat of vaporisation (IONESCU), ii, 644.
- Soy**. See Soja.
- Sparteine**, detection of (COUCH), ii, 448.
- Spathulatine**, and its derivatives (COUCH), i, 61.
- Spectra**, complex structure of (GOUDSMIT), ii, 725.
- multiplet structure in (BRAMLEY), ii, 831.
- quantum theory of red displacement in (KUDAR), ii, 467.
- periodicity in structure of (MEGGERS), ii, 258.
- excitation of, by impact of electrons (HERTZ and DE VISSER), ii, 338.
- excitation of forbidden lines in (FOOTE, TAKAMINE, and CHENAULT), ii, 916.
- broadening of lines in (HOLTSMARK and TRUMPY), ii, 338.
- fine structure of lines in (VALLARTA), ii, 449; (RUARK and CHENAULT), ii, 1103.
- intensities of lines in (KEMBLE), ii, 178; (TAMM), ii, 1023; (FOWLER), ii, 1104.
- inter-combination lines in (BOUMA), ii, 915.
- multiplet lines in (RUSSELL; RAMAN and DATTA), ii, 614.
- intensity of multiplet lines in (ORNSTEIN and BURGER), ii, 251; (FERMI), ii, 340; (SOMMERFELD and HÖNL), ii, 468; (KRONIG), ii, 458, 917; (RUSSELL), ii, 725; (ORNSTEIN), ii, 916; (BACK), ii, 917.
- Zeeman patterns in (HICKS), ii, 3.
- influence of an electric field on Zeeman effect in (UREY), ii, 170.
- doublets and triplets in (SUGIURA), ii, 726.
- absorption maxima in, determined spectroscopically and spectrophotometrically (GOMBOS), ii, 178.
- in relation to the polarisability of the atom-core (SCHRÖDINGER), ii, 722.
- of atoms of the same electronic structure (HARTREE), ii, 2; (BOWEN and MILLIKAN), ii, 916.
- of elements from scandium to nickel (HUND), ii, 912.
- of the lighter elements, primed terms in (LAPORTE), ii, 1104.
- Spectra of explosive mixtures of oxygen, nitrogen, and acetylene** (GARNER and SAUNDERS), ii, 627.
- of exploded wires (SMITH), ii, 1017.
- absorption, of aldehydes and ketones (LECOMTE; PURVIS), ii, 627.
- and constitution of colouring matters (KEHRMANN and SANDOZ), i, 983.
- dispersion and density of homologous compounds (KRETHLOW), ii, 1029.
- of ketones (PLOTNIKOV), ii, 837; (LANGEDIJK), ii, 1116.
- of mixed metal vapours (BARRATT), ii, 927.
- of non-polar compounds and unsaturated ketones (SCHEIBE, RÖSSLER, and BACKENKÖHLER), ii, 352.
- infra-red (MARTON), ii, 1025.
- of alcohols (LECOMTE), ii, 351.
- of organic ammonia compounds (BELL), ii, 928.
- ultra-red (BONINO), ii, 838.
- ultra-violet, photography of (CROSS), ii, 351.
- photometric measurement of (LEY and VOLBERT), ii, 78.
- of very dilute solutions (SUHRMANN and HUPPERT), ii, 773.
- of organic acids (VLAS and GEX), ii, 472.
- of benzene derivatives (KLINGSTEDT), ii, 929.
- of metallic halides (GETMAN), ii, 837.
- of organic compounds (MARCHLEWSKI and MOROZ), ii, 353.
- K*-absorption**, and chemical constitution (STELLING), ii, 935, 936.
- L*-absorption** (NISHINA), ii, 457.
- arc**, broadening of lines in (LOWERY; JOHNSON), ii, 614.
- complexity of lines in (ROYDS), ii, 249.
- excitation of forbidden lines in (FOOTE, TAKAMINE, and CHENAULT; TAKAMINE and FUKUDA), ii, 186.
- Stark effect in (NAGAOKA and SUGIURA), ii, 171.
- of the platinum metals (MEGGERS), ii, 454.
- arc and spark**, *s*-terms in (v. WIŚNIEWSKI), ii, 449.
- displacement law for (MEGGERS, KIESS, and WALTERS), ii, 77.
- Döppler effect in (KREFFT), ii, 78.
- band** (DALTA), ii, 86.

- Spectra**, band (MECKE), ii, 259, 351, 736; (DESLANDRES), ii, 736, 1023, 1114; (DUFFIEUX), ii, 1023; (DUFFENDACK), ii, 1114.  
 quantum theory of (BLACKBURN), ii, 260.  
 structure and distribution of (DESLANDRES), ii, 626, 930.  
 nature of (NICHOLSON), ii, 930.  
 isotope effect in (MULLIKEN), ii, 259, 346, 833, 1020.  
 intensities in (FOWLER), ii, 623; (MECKE), ii, 626; (DIEKE), ii, 626, 836; (HÖNL and LONDON), ii, 1024.  
 in relation to molecular properties (KRATZER), ii, 836.  
 band emission, of aromatic compounds (MARSH), ii, 470, 625.  
 cathode, of metals and their salts (KIMURA and NAKAMURA), ii, 166, 167.  
 comet tail (LEMON), ii, 249.  
 complex (HUND), ii, 1104.  
 continuous, of halogens (STEBING), ii, 452.  
 diffraction, oscillation phenomena in (BUCHWALD), ii, 1117.  
 flame, intensity measurements in (BLEEKER and BONGERS), ii, 77; (BLUKER), ii, 1025.  
 fluorescence (BAYLE, FABRE, and GEORGE), ii, 260; (NUNAN and MARSH), ii, 353.  
 infra-red (WITT; TROWBRIDGE), ii, 335.  
 band, constants of (FERMI), ii, 471.  
 magnetic, study of (NIKITIN), ii, 173.  
 mass (ASTON), ii, 618.  
 of light elements (COSTA), ii, 1021.  
 $\beta$ -ray (THIBAUD), ii, 622.  
 $\gamma$ -rays, study of, by crystal diffraction (THIBAUD), ii, 176.  
 Röntgen ray (LEVI), ii, 456; (LEIDE; RÉCHOU; RAY; v. WIŚNIEWSKI), ii, 457; (BÄCKLIN, SIEGBAHN, and THOREUS), ii, 614.  
 intensities in (ROBINSON), ii, 728.  
 energy levels of (COSTER), ii, 458.  
 semi-optical lines in (BÄCKLIN, SIEGBAHN, and THOREUS), ii, 457; (DE BROGLIE and DAUVILLIER), ii, 458.  
 $L\alpha$ -doublets in (RAY), ii, 78.  
 from a ruled reflection grating (COMPTON and DOAN), ii, 1103.  
 effect of a surrounding box on (COMPTON and BEARDEN), ii, 367.
- Spectra**, Röntgen ray, of aliphatic acids (DE BROGLIE and TRILLAT), ii, 640.  
 of elements from aluminium to calcium (BÄCKLIN), ii, 914.  
 of light elements,  $K$  lines in (TURNER), ii, 915.  
 of long-chain organic compounds (SHEARER), ii, 938.  
 quantitative analysis by means of (COSTER and NISHINA), ii, 324.  
 continuous (MARCH), ii, 614; (BRONSTEIN), ii, 727.  
 doublet (WENTZEL), ii, 728.  
 Röntgen-spark (WENTZEL), ii, 251.  
 resonance fluorescence, Doppler effect in (RUMP), ii, 473.  
 series (BOWEN and MILLIKAN), ii, 252.  
 quantum numbers and (LINDSAY), ii, 915.  
 spark (WERNER), ii, 165.  
 in the Schumann region (L. and E. BLOCH), ii, 726.  
 classification of enhanced lines in (KIMURA and NAKAMURA; KIMURA), ii, 726.  
 Tesla-luminescence (MCVICKER, MARSH, and STEWART), ii, 12, 86, 630.  
 ultra-violet, visual perception of lines in (STEBING), ii, 449.  
 screening doublets in (UNSÖLD), ii, 1016.  
 intensity of (DORGELO), ii, 335.  
 of alkali metal (SHAVER), ii, 451.  
 emission, of halogens (LUDLAM and WEST), ii, 350.  
 spark (LANG), ii, 609.
- Spectrochemistry** of aromatic polynuclear hydrocarbons (v. AUWERS and KRAUL), i, 900.  
 of nitrogen compounds (v. AUWERS and KRAUL), ii, 847.  
 ultra-red (BONINO), ii, 1032.
- Spectrograph**, Röntgen ray (CORK), ii, 250; (MÜLLER), ii, 895.
- Spectrometer**, colour vision (PEDDIE), ii, 1118.
- Spectrophotometer**, direct-reading (KEUFFEL), ii, 1193.
- Spectroscope**, lighting unit for (FREDERICK and WEBSTER), ii, 588.
- Spectroscopy**, shift law in (FURS), ii, 340.  
 new apparatus for (LEISS), ii, 341.  
 electric and magnetic (ARKADIEV), ii, 750.
- Sperm oil**, constitution of tetradecenoic acid from (TSUJIMOTO), i, 1128.
- Arctic, unsaponifiable matter of (TSUJIMOTO), i, 772.

- Spermine**, isolation of, and its salts and derivatives (DUDLEY, M. C. and O. ROSENHEIM), i, 294.  
 phosphate, isolation of, from semen and testis (ROSENHEIM), i, 180.  
**Sphagnum**, acidity of salt solutions after shaking with (SKENE and STUART), i, 765.  
**Sphingosine** (LEVENE and HALLER), i, 890.  
*Spiraea*, monotropitin in roots of species of (BRIDEL), i, 347.  
**Spirans** (LEUCHS and SANDER), i, 1432.  
 synthesis of (RADULESCU and GEORGESCU), i, 819.  
 colour of (RADULESCU), i, 1159.  
**Spleen**, formation of bile pigments in (ERNST and SZAPPANYOS; ERNST; ERNST and FÖRSTER), i, 732.  
 production of urea in autolysis of (McCANCE), i, 472.  
 effect of removal of, on blood-sugar (BIERRY, RATHERY, and LEVINA), i, 857.  
**Splenomegaly**. See Gaucher's disease.  
**Squill**, African. See *Urginea Burkett*.  
**Stability of organic compounds** (BOLIN), ii, 411.  
**Staining of tissues** (GICKLHORN and KELLER), i, 468.  
**Standard solutions**. See Solutions, standard.  
**Stannic salts**. See under Tin.  
**Stannous salts**. See under Tin.  
*Staphylococcus*, action of bismuth on (LEMAI and JALOUSTRE), i, 206.  
**Starch** (LING and NANJ), i, 516, 517; (FRINGSHEIM and LEIBOWITZ), i, 1043; (FRINGSHEIM, LEIBOWITZ, and SILMANN), i, 1244.  
 formation of, from arabinose by plants (POLONOVSKI and MORVILLE), i, 1222.  
 constitution of (KUHN), i, 11, 686.  
 elasticity and tensile strength of (NEALE), ii, 783.  
 hydrolysis of (BIEDERMANN and JERNAKOFF), i, 11; (KARRER), i, 1370.  
 action of polarised light on (BALY and SEMMENS), i, 12; (JONES), i, 1212.  
 adsorption of iodine by (ANGELESCU and MIROESCU), ii, 1149.  
 absorption of water by films of boiled (FARROW and SWAN), ii, 506.  
 swelling of, in cells (LEPESCHKIN), i, 1004.  
 swelling of granules of (ARZICHOVSKI), ii, 967.  
 saccharification of, by amylase (PETIT and RICHARD), i, 1504.  
**Starch**, decomposition of, by bacteria (STEDICH), i, 1510.  
 action of diastase on (LECOQ; DE HOOP and VAN LAER), i, 470.  
 colloidal, properties of (SAMEC), ii, 1153.  
 paste, liquefaction of (PETIT), ii, 967.  
 capillary flow of (FARROW and LOWE), ii, 509.  
 sols, properties of (KRUYT and TENDELOO), ii, 113.  
 iodide, composition of (MURRAY), i, 889.  
 determination of (CHRSZASZCZ), ii, 74.  
**Stearaldehyde p-nitrophenylhydrazone** (STEPHEN), i, 1131.  
**Stearic acid**, crystal structure of (MULLER), ii, 748.  
 mixtures of eicosaic acid and (MORGAN and BOWEN), i, 114.  
 calcium salt (KLIMONE, v. MOLTINI, and BENEDIK), i, 506.  
 solubility of (HARRISON), ii, 190.  
 sodium salt, emulsifying power of (YAJNIK and ILAHI), ii, 968.  
 thallium salt (HOLDE and SELIM), i, 504.  
**Stearic acid, dibromodiodo- and diiododihydroxy-** (HOLDE and GORGAS), i, 883.  
 $\beta$ -hydroxy-, and its ethyl ester, and hydrazide (LEVENE and HALLER), i, 890.  
 $\gamma$ -hydroxy- (CLUTTERBUCK), i, 5.  
 dihydroxy-, oxidation of (LAPWORTH and MOTTHAM), i, 1234.  
**Stearolic acid**, crystal structure of (MULLER), ii, 748.  
 hydration of (ROBINSON), ii, 745.  
*N*-Stearylpropylenediamine (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1138.  
**Stereochemistry** (WALDEN), i, 349.  
 studies in (HOLMBERG and MÜLLER), i, 1236; (HOLMBERG), i, 1238; (HOLMBERG and ROSÁN), i, 1291.  
 of aromatic compounds (KUHN and JACOB), i, 1404.  
**Stereoisomerism and permeability** (OKAGAWA), i, 711.  
 of aromatic compounds (KUHN and JACOB), i, 1260.  
**Steric hindrance** (FREUDENBERG and HUBER), i, 229.  
**Steric series** (FREUDENBERG and MARKEET), i, 1275.  
**Sterol**,  $C_{24}H_{38}O$ , and its acetate, from American cotton wax (CLIFFORD and PROBERT), i, 879.  
**Stibinic acids**, aromatic, complex metallic compounds of (CHEMISCHE FABRIK VON HEYDEN), i, 87.

- Stigmastane** (WINDAUS and BRUNKEN), i, 394.
- Stigmastanol**. See Tetrahydrostigmastanol.
- Stigmastanone**, and its derivatives (WINDAUS and BRUNKEN), i, 394.
- Stigmastanol** (WINDAUS and BRUNKEN), i, 394.
- Stilbazole methiodide** (KOENIGS, KÖHLER, and BLINDOW), i, 834.
- 2-Stilbazole**, *cis*- and *trans*-2'-amino-, and -2'-nitro-, and their derivatives (RATH and LEHMANN), i, 432.
- Stilbene hydrate** (ISHIBASHI), i, 1432.
- Stilbene**, 4-iodo-2-nitro-, and 2:4-dinitro-2'-hydroxy- (GULLAND and ROBINSON), i, 1188.
- 2-nitro-4'-amino-4-cyano-, and its hydrochloride and derivatives (PFEIFFER, KALCKBRENNER, and BEHR), i, 549.
- 2':4'-dinitro-3:4-dihydroxy-, methylene ether (DEY and ROW), i, 954.
- Stilbene- $\alpha$ -carboxylic acid**, derivatives of (DEY and ROW), i, 954.
- Stilbene-4-carboxylic acid**, 2-nitro-4'-amino-, and its salts and derivatives (PFEIFFER, KALCKBRENNER, and BEHR), i, 549.
- Stilbenediazonium hydrogen sulphate**, nitro- (GULLAND and ROBINSON), i, 1188.
- Stilbenediol**, potassium salt (SCHEUING and HENSLE), i, 27.
- Stirring apparatus**, test of efficiency of (ROTH), ii, 150.
- Strawberry**, non-volatile acids of (NELSON), i, 762.
- Streptococcus**, action of bismuth on (LEMAX and JALOUSTRE), i, 206.
- Strontium**, structure of (COLLINS), ii, 733.
- pure, preparation of (DANNER), ii, 62.
- photo-electric effect on (DÖPEL), ii, 832.
- Strontium alloys** with mercury, electrodes of. See Electrodes.
- Strontium chloride**, refractive power of, for X-rays (MARK and TOLES DORF), ii, 933.
- selenide, crystal structure of (SLATTERY), ii, 369.
- Strontium detection**:—
- detection of (KOLTHOFF), ii, 1095.
- detection of, in presence of barium (FEIGL), ii, 435.
- Strophanthidin**, structure of (JACOBS and COLLINS), i, 1082.
- $\psi$ -Strophanthidin** (JACOBS and COLLINS), i, 567.
- Strophanthin** (JACOBS and COLLINS), i, 566, 1082.
- toxicity of (Tocco-Tocco), i, 613.
- Strophanthus lei**, saponin from (WELLS and GARCIA), i, 614.
- Strychnine** (LIONS, PERKIN, and ROBINSON), i, 831.
- arsenious tartrate (DEBUCQUET), i, 1090.
- Strychnos**, determination of alkaloids in preparations of (SABALITSCHKA and JUNGEMANN), ii, 608.
- Strychnos alkaloids** (LEUCHS and KANAO), i, 61; (LEUCHS and TAUBE), i, 1314.
- Sturgeon**. See *Acipenser sturio*.
- Styphnic acid**, methyl ester, pyridine and quinoline salts (KÖHN and LÖFF), i, 1265.
- Styrene** (*phenylethylene*),  $\alpha$ -chloro- (DUFRAISSE and VIEL), i, 1138.
- Styrylacrolein**. See  $\epsilon$ -Phenyl- $\Delta^8$ -pentadien- $\alpha$ -al.
- Styryl amyl ketone**, and its oxime (RYAN and SHANNON), i, 558.
- 2-Styryl-3-o-anisolesulphonyl-2-methylquinoline**, and its hydrochloride (TRÖGER and BROHM), i, 1453.
- Styrylbenzopyrylium salts** (WALKER and HEILBRON), i, 693; (HEILBRON, WALKER, and BUCK), i, 694.
- Styryldichloroarsine**,  $\alpha$ -chloro- (HUNT and TURNER), i, 844.
- 2-Styrylchromanol**, derivatives of (ROBINSON and SHINODA), i, 1301.
- 2-Styrylchromone**, 3:7-di- and 3:5:7-trihydroxy- (ROBINSON and SHINODA), i, 1301.
- Styryl *p*-methoxystyryl ketone**, *m*-amino- and *o*- and *p*-nitro- (PFEIFFER, PRAHL, FITZ, and STOLL), i, 680.
- Styryl *p*-methoxystyryl ketones**, amino-, and their perchlorates (PFEIFFER), i, 410.
- 2-Styryl-4-methylbenzopyrylium chloride**, 4':7-di- and 3':4':7-trihydroxy- (HEILBRON, WALKER, and BUCK), i, 694.
- Styryl methyl ketone** (*benzylideneacetone*), absorption spectra of (PURVIS), ii, 627.
- oxide (WEITZ), i, 408.
- and *o*-chloro-, and *o*-hydroxy-, hydrazones of (v. AUWERS and KREUDER), i, 1455.
- Styryl methyl ketone**, chloro-oximino-, and its derivatives (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132.
- $\alpha$ -thiocyano-, and its dibromide (CHALLENGER and BOTT), i, 936.
- Styryl methyl ketone-*p*-arsinic acid**, semicarbazone (MARGULIES), i, 448.
- 2-Styryl-1-methyl-4-quinazolone** (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.

- Styryl nitrocinnamylidenemethyl ketones** (PFEIFFER), i, 409.
- 2-Styrylpyridine**, 4:6-dichloro-5-cyano-, and its dimeride (SPÄTH and KOLLER), i, 1446.
- 2-Styrylquinoline**, derivatives of (PFEIFFER, RHEINOLDT, and WOLF), i, 412.
- 2- and 4-*β*-Styrylquinolines**, hydroxy-derivatives, and their salts (TRÖGER and DUNKER), i, 433.
- Sub-electrons** (DAECKE), ii, 258, 349.
- Sublimation**, devices for (JOHN and FISCHL), ii, 897.
- Submaxillary glands**, metabolism of phosphoric acid in (CAMIS), i, 191.
- Substance**,  $C_3H_5O_5NS$ , from lactamide and thionyl chloride (BERGMANN and MIEKELEY), i, 235.
- $C_3H_4O_2NCl$ , from dichlorourethylane and hydrogen chloride (MELDRUM and ALIMCHANDANI), i, 1273.
- $C_4H_4O_3N_2$ , from diketopiperazine and hypobromite (GOLDSCHMIDT and STEIGERWALD), i, 1109.
- $C_5H_5OCl_5$ , from *m*-aminophenol and sulphuryl chloride (ELLER and LORENZ), i, 538.
- $C_5H_5O_4ClS$ , from ethyl lactate and thionyl chloride (BERGMANN and MIEKELEY), i, 235.
- $C_6H_5OCl$ , from chlorine monoxide and cyclohexene (GOLDSCHMIDT and SCHÜSSLER), i, 498.
- $C_{10}H_{18}O_2$ , from lemon oil (ROMEO), i, 1293.
- $C_{10}H_{12}ON_2Br$ , from  $\alpha$ -bromocinnamaldehyde and methylhydrazine (v. AUWERS and OTTENS), i, 1429.
- $C_{11}H_{13}O_3Cl_6$ , from condensation of acetone and chloroform (TAFPE), i, 2.
- $C_{12}H_{16}O_2$ , from oil of Appa grass (MOUDGILL), i, 945.
- $C_{13}H_{10}ON_2Se$ , from phenylpiaselenazanium chloride and alkalis (BATTEGAY and VÉCHOT), i, 1467.
- $C_{13}H_{14}O_5N_2$ , from tryptophan in the body (MATSUOKA and YOSHIMATSU), i, 731.
- $C_{14}H_{14}O_2$ , from chloroacetic acid and magnesium phenyl bromide (PETERS, GRIFFITH, BRIGGS, and FRENCH), i, 544.
- $C_{14}H_{15}O_7$ , from carbon dioxide and dimethylketen (STAUDINGER, FELIX, and HARDER), i, 786.
- $C_{14}H_{13}N_3$ , from 2:4-dimethylpyrrole, hydrogen chloride, and hydrogen cyanide (FISCHER and NENTZESCU), i, 885.
- Substance**,  $C_{14}H_{19}O_5Cl_2$ , and its derivatives, from *m*-hydroxytoluic acid and chloral hydrate (MELDRUM and ALIMCHANDANI), i, 1272.
- $C_{15}H_{16}O_2$ , from  $\alpha$ -bromopropionic acid and magnesium phenyl bromide (PETERS, GRIFFITH, BRIGGS, and FRENCH), i, 544.
- $C_{15}H_{14}ON_2$ , from phenylhydrazine and derivatives of phenyl  $\beta$ -hydroxyvinyl ketone (v. AUWERS and SCHMIDT), i, 585.
- $C_{15}H_{20}O_3N_2$ , and its salts, from oxidation of eserethole (STEDMAN and BARGER), i, 293.
- $C_{16}H_9ONS$ , from oxidation of 4-hydroxy-2-nitrophenyl  $\alpha$ -naphthyl sulphide (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 596.
- $C_{16}H_{10}O_3N_2$ , from 2-hydroxyanthraquinonyl-3-hydrazine and acetic anhydride (TANAKA), i, 1434.
- $C_{16}H_{11}ON_3$ , from oxidation of 1-benzeneazo-2-aminonaphthalene (CHARRIER, CRIPPA, TOIA, and BIANCHETTI), i, 590.
- $C_{16}H_{22}ON_2$ , and its dipicrate, from methylation of esoline ethyl ether (STEDMAN and BARGER), i, 293.
- $C_{17}H_{22}O_3$ , from bacterial decomposition of cholic acid (KAZIRO), i, 1363.
- $C_{17}H_{13}ON_3$ , from *o*-nitro- $\alpha$ -phenylcinnamonitrile and potassium cyanide (BRAND and LOEHR), i, 684.
- $C_{18}H_{24}O_{10}Cl_3$ , from indene and chlorine monoxide (GOLDSCHMIDT and SCHÜSSLER), i, 498.
- $C_{18}H_{20}O_3N_2$ , and its salts, from methylation of esoline ethyl ether (STEDMAN and BARGER), i, 293.
- $C_{19}H_{24}O_{10}$ , from carbon dioxide and dimethylketen (STAUDINGER, FELIX, and HARDER), i, 786.
- $C_{20}H_{11}O_3N$ , from isatin and 4:5-benzocoumaran-3-one (FRIES and FUSCH), i, 569.
- $C_{20}H_{27}O_3N_3P$ , from lactophenine, anæsthesin, and phosphoryl chloride (WEIL), i, 157.
- $C_{21}H_{13}N_4$ , and its derivatives from aniline and 5-chloro-4-phenyl-1-*p*-tolyl-1:2:3-triazole and also from *p*-toluidine and 5-chloro-1:4-diphenyl-1:2:3-triazole (CARNELLEY and DUTT), i, 166.
- $C_{21}H_{22}O_4$ , from oxidation of methyl abietate (RUZICKA, MEYER, and PFEIFFER), i, 1420.
- $C_{22}H_{26}O_4N_4$ , from aminoantipyrine and acetylanæsthesin (WEIL), i, 157.

- Substance,  $C_{28}H_{38}N_4I_2$ , from action of methyl iodide on calycanthine (SPÄTH and STROH), i, 1447.
- $C_{28}H_{38}O_8$ , from  $\beta\beta$ -diphenylpropionic acid and magnesium phenyl bromide (PETERS, GRIFFITH, BRIGGS, and FRENCH), i, 544.
- $C_{28}H_{38}O_8$ , from piperonal and *p*-methoxystyryl ethyl ketone (RYAN and CAHILL), i, 558.
- $C_{28}H_{34}N_4$ , from phenylacetonitrile and 3-cyano-2-methylindole (SEKA), i, 67.
- $C_{28}H_{38}N_4$ , and its derivatives, from 2-benzyl-1-hydrindone and phenylhydrazine (LEUCHS and WINZER), i, 1281.
- $C_{28}H_{38}O_4$ , from anisaldehyde and ketones (RYAN and CAHILL), i, 558.
- $C_{28}H_{37}O_2N$ , from oxidation of delphinin (KELLER), i, 831.
- Substitution, influence of, on physical and chemical properties (RULE and PATERSON), i, 29.
- effect of, on equilibria in binary systems (KREMANN and DRAZIL), ii, 649; (KREMANN, ZECHNER, and WEBER; KREMANN, ZECHNER, and DRAZIL), ii, 650.
- in aromatic compounds (BARNETT, COOK, and MATTHEWS), i, 648.
- influence of  $\alpha$ -methoxyvinyl groups in (C. K. and E. H. INGOLD), i, 657.
- directive influence of nitrogen and oxygen atoms in (HOLMES and INGOLD), i, 1142.
- influence of nitroso groups in (INGOLD), i, 646.
- in the aromatic nucleus (BARNETT and MATTHEWS), i, 18; (PEINS), i, 18, 379; (BARNETT and COOK), i, 123; (BARNETT, COOK, and MATTHEWS), i, 900, 1140, 1398.
- in the benzene nucleus (FRANCIS, HILL, and JOHNSTON), i, 1141.
- Succinamic acid, *d*-thiol- (LEVENE and MIKESKA), i, 6.
- Succinic acid, electrolytic preparation of (NORRIS and CUMMINGS), i, 668.
- dissociation constants of (BRITTON), ii, 977.
- radical dissociation of aryl derivatives of (LÖWENBEIN and FOLBERTH), i, 552.
- equilibria of, with phenols (KREMANN, ZECHNER, and DRAZIL), ii, 650.
- oxidation of, in tissues (v. SZENT-GYÖRGYI), i, 93.
- alkaline earth salts, solubilities of (WALKER), ii, 769.
- Succinic acid, aniline trihydrogen salt (RAMBECH), i, 385.
- lead salt, solubilities of (AUERBACH and WEBER), i, 1180.
- di-*p*-tolyl and di-*m*-xylyl esters, and dibromo-, di-*p*-tolyl ester (FRIES and BARTENS), i, 568.
- detection of, in tissues (KLEIN and WERNER), i, 871.
- Succinic acid, thiol-, and its sodium salts (LEVENE and MIKESKA), i, 512.
- d*-thiol- (LEVENE and MIKESKA), i, 6.
- Succinic acids, substituted, synthesis of (BAKER and LAPWORTH), i, 670.
- Succinic acids,  $\alpha\beta$ -diamino-, stereo-isomeric, and the dibenzoyl derivative of the *meso*-form (KUHN and ZUMSTEIN), i, 1249.
- Succinimide, mercury derivatives of (LYONS), i, 646.
- Succinimide, amino-, derivatives of (CHERBULIEZ and CHAMBERS), i, 1046.
- iodo-, structure and crystallography of (YARDLEY), ii, 746; (TUTTON), ii, 747.
- Succinimides, tetra-alkyl derivatives, and their pharmacological action (DOX), i, 796.
- CC*-substituted, preparation of (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 376.
- Succinodihydrogenase, effect of potassium salts on (SAHLIN), i, 748.
- Succinylfluorescein (DUTT and THORPE), i, 141.
- Succinylrhodamine hydrochloride (DUTT and THORPE), i, 142.
- Succinyl-*p*-tolil, nitration of (BRADY, QUICK, and WELLING), i, 1400.
- Sucrose (*saccharose*; *cane-sugar*), rotatory dispersion of (LOWRY and RICHARDS), ii, 265.
- configuration of (SCHLUBACH and RAUCHALLES), i, 1243.
- effect of inorganic salts on the polarization of solutions of (BROWN), ii, 372.
- osmotic pressure of (APPLEBEY and DAVIES), ii, 964.
- inversion coefficient of (SAILLARD), i, 1133.
- catalysis and inversion of, by acetic acid (SAILLARD), ii, 307.
- effect of dextrose and levulose on the inversion of, by honey invertase (NELSON and SOTTERY), i, 104.
- hydrolysis of (NELSON and BODANSKY), i, 1008.
- hydrolysis constant of (COLIN and CHAUDUN), i, 238.

- Sucrose** (*saccharose*; *cane-sugar*), hydrolysis of, by invertase in presence of  $\alpha$ -methylglucoside (NELSON and FREEMAN), i, 739.  
 solubility of (MONDAIN-MONVAL), ii, 769.  
 effect of catalysts on carbonisation of (LESSING and BANKS), i, 9.  
 acids resulting from yeast fermentation of (KOSTYTSCHIEV and FREY), i, 1214.  
 determination of, oxidimetrically (TÄUFEL and WAGNER), ii, 1007.
- Sugars**, preparation of, by means of diphenylmethanedimethyldihydrazine (v. BRAUN and BAYER), i, 1382.  
 and their derivatives, rotation and structure of (HUDSON and PHELPS), i, 8; (HUDSON), i, 232, 233, 514, 636; (HUDSON and KUNZ), i, 1043.  
 theory of protective action of (SHRIVASTAVA, GUPTA, PRASAD, and BHATNAGAR), ii, 293.  
 nomenclature of isomeric (WOHL and FREUDENBERG), i, 866.  
 adsorption of, by colloidal solutions (PRASAD, SHRIVASTAVA, and GUPTA), ii, 957.  
 condensation of, with dilute mineral acids (LEVENE and ULPTS), i, 1042.  
 oxidation of alcohols from (VOTOČEK and LAKES), i, 773.  
 oxidation of, by permanganates (KUHN and WAGNER-JAUREGG), i, 1241.  
 relative reducing powers of (ROWE and WIENER), i, 885.  
 reduction of, by aluminium alloys (NANJI and PATON), i, 117.  
 unsaturated reduction products of (BERGMANN, MIEKELEY, and STATHER), i, 227; (BERGMANN), i, 887.  
 acetone fermentation of (SPEAKMAN), i, 1013.  
 fermentation of, by microbes (KLUYER and DONKER), i, 1215.  
 constitution of the monocarboxylic acids derived from (PRYDE, HIRST, and HUMPHREYS), i, 865.  
 lactone formation from carboxylic acids of (LEVENE and SIMMS), i, 1380.  
 phosphorylation of (NEUBERG and KOBEL), i, 1508.  
 compounds of sulphuric acid with (OHLE and BOURJAN), i, 634.  
 and their derivatives, bismuth nitrates of (MASCHMANN), i, 527.  
 halogen acetyl derivatives of, and their optical rotation (BRAUNS), ii, 633.
- Sugars**, in blood. See under Blood.  
 in cerebro-spinal fluid, in relation to sugar in blood (GOODWIN and SHELLEY), i, 858.  
 in liver, effect of alcohols on (LESSER), i, 613.  
 in urine. See under Urine.  
 colloidal (v. WEIMARN), ii, 290, 390.  
 polymethylated, action of emulsin on (KUHN and SCHLUBACH), i, 863.  
 reducing, analysis of (RUOSS), ii, 244.  
 determination of (PICK), ii, 906.  
 determination of, volumetrically (LANE and EYNON), ii, 445.  
 analysis of (HILDT), ii, 244; (KLASON), ii, 331.  
 determination of, by Benedict's method (QUICK), i, 1115.  
 determination of, volumetrically (VAN DER HOEVEN), ii, 331.
- Sulphæmoglobin**, formation of (VAN DEN BERGH and WIERINGA), i, 1475.
- Sulphatase** (NEUBERG and SIMON; ROSENFELD), i, 743.
- Sulphates**. See under Sulphur.
- Sulphinic acids**, and their derivatives, action of hydroxylamine on (WHALEN and JONES), i, 802.
- "Sulphisatyd,"** identity of 3-thioxindole and (SANDER), i, 977.
- Sulphites**. See under Sulphur.
- Sulphoacetaldehyde**, chloro-, barium salt (LEPOUSE), i, 784.
- Sulphoacetic acid**, complex salts of (HAHN and WOLF), ii, 578.
- Sulphoacetic acid**, bromo-, resolution of (BAEKER and MOOK), i, 632.  
 chloro-, resolution of, and its salts (BAEKER and BURGESS), i, 359, 631.  
 potassium salt, crystallography of (JAEGER), ii, 948.
- 3-Sulpho-5-arsinobenzenesulphamic acid**, 2-hydroxy, barium salt (CHRISTIANSEN, NORTON, and SHOHAN), i, 1471.
- Sulphobenzoic acid**, metallic and triamine salts of (HAHN and WOLF), i, 814.  
 complex salts of (HAHN and WOLF), ii, 578.
- $\alpha$ -Sulpho- $\beta$ -benzoylpropionic acid**, and its disodium salt (BOGERT and RITTER), i, 816.
- Sulphonamides**, aromatic *N*-halogenated, alkali salts (CHEMISCHE FABRIK VON HEYDEN), i, 380.
- 1-4'-Sulphonaphthaleneazo-2:4-di-hydroxynaphthalene**, 1-amino- (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 988.

- Sulphonium compounds**, physiological activity and mobility of -onium ions in (BENCOWITZ and RENSHAW), ii, 872.  
 effect of, on the nervous system (HUNT and RENSHAW), i, 861.
- 2-*p*-Sulphophenyl-5-amino-6-methyl-1:3-benzotriazole**, and its salts (BERETTA and JACOB), i, 589.
- 1-*p*-Sulphophenyl-3-methyl-5-pyrazolone**, preparation of (REEVES), i, 699.
- 1-*p*-Sulphophenyl-1:2:5-triazole-3:4-dicarboxylic acid**, and its strontium salt (BERETTA and JACOB), i, 589.
- d*-α-Sulphopropionic acid**, and its sodium salts (LEVENE and MIKESKA), i, 512.
- 5-Sulphopyrocatechol-4-carboxylic acid**, barium salt (FICHTER and STOCKER), i, 240.
- Sulphosuccinic acid**, and its potassium salts (LEVENE and MIKESKA), i, 512.
- d*-Sulphosuccinic acid**, salts of (LEVENE and MIKESKA), i, 6.
- d*-Sulphosuccinimonoamide**, barium salt (LEVENE and MIKESKA), i, 6.
- Sulphoxyl compounds** (BINZ and BAUSCH), i, 991.
- Sulphur**, spectrum of (BUNGARTZ), ii, 609.  
*K*-absorption spectrum of (ROBINSON), ii, 614.  
 absorption spectra and constitution of the vapour of (HENRI and TEVES), ii, 19, 87.  
 spectrum of electrodeless discharge in vapour of (SHAVER), ii, 471.  
 Röntgen ray spectra of, and its compounds (RAY), ii, 914.  
 series spectra of (BOWEN and MILLIKAN), ii, 342, 610.  
 spectral frequencies of (HOLWECK), ii, 386.  
 critical potential of (HOLWECK), ii, 729.  
 liquid, electrical properties of (BLACK), ii, 24.  
 valency of (LECHER), i, 390; (LECHER, KÖBERLE, and STÖCKLIN), i, 391; (STEINKOPF), i, 657.  
 colloidal, surface tension of (JOHLIN), ii, 1054.  
 sols, effect of salts on stability of (v. WEIMARN and UTZINO), ii, 664.  
 velocity of transformation of (FRAENKEL and GOEZ), ii, 557.  
 affinity of metals for (JELLINEK and ZAKOVSKI), ii, 401.  
 and its compounds, corrosion of metals by naphtha solutions of (WOOD, SHERLT, and TRUSTY), ii, 980.  
 interaction of nitrogen sulphide and (USHER), ii, 581.
- Sulphur**, as a fertiliser (KALUSHSKI), i, 492.  
 nacreous, physical properties of (WHITAKER), ii, 486.  
 precipitated, separation of, in analysis (AWSCHALOM), ii, 823.
- Sulphur compounds**, acid nature of (KARVE), ii, 1188.
- Sulphur monochloride**, decomposition of, by water (NOACK), ii, 989.  
 action of, on organic acid amides (NAIK and PATEL), i, 121.  
 action of, on thioamides (ISHIKAWA), i, 1149.
- Disulphur dichloride**, decomposition of, by water (NEUMANN and FUCHS), ii, 410.
- Sulphuryl chloride** (O. and C. A. SILBERRAD and PARKE), i, 1137.  
 catalysis of the formation of (CUSMANO), ii, 690.  
 thermal decomposition of (SMITH), ii, 876.
- Disulphur difluoride**, preparation and properties of (CENTNERSZWER and STRENK), ii, 701.
- Sulphur hydride**. See Hydrogen Sulphide.
- Sulphides**, electrolytic preparation of (FISCHER), ii, 807.  
 analysis of mixtures of sulphites, thiosulphates and (KURTENACKER and BITTNER), ii, 239.  
 determination of, in alkali and alkaline earth sulphides (SCHULEK), ii, 327.
- Sulphur dioxide**, electrolysis in (CADDY and TAFT), ii, 1073.  
 electrochemistry of oxidation by (CARTER and JAMES), ii, 134.  
 adsorption of, by glass (BANGHAM and BURR), ii, 657.  
 heat of adsorption of, by silica gels (PATRICK and GREIDER), ii, 870.  
 adsorption of, in water (WHITMAN and DAVIS), ii, 106; (SHERWOOD), ii, 852.  
 solubility of, in water and aqueous solutions of potassium chloride and sodium sulphate (HUDSON), ii, 768.  
 equilibrium of water and (TAMMANN and KRIGE), ii, 869.  
 solubility of mixtures of cetene and (SEYER and HUGGETT), ii, 504.  
 solubility of mixtures of *n*-hexane and (SEYER and GILL), ii, 504.  
 gaseous, photochemical decomposition of (HILL), ii, 58.  
 detection of (EGERIWE), ii, 156.

**Sulphur sesquioxide** (VOGEL and PARTINGTON), ii, 890.

*trioxide*, pure, melting point and vapour pressure of (SMITS and SCHOENMAKER), ii, 267; (SMITS), ii, 268.

**Sulphurous acid**, and its salts (FOERSTER and KUBEL; FOERSTER, BROSCHE and NOBERG-SCHULZ), ii, 120.

absorption spectra of (DIETZEL and GALANOS), ii, 1115.

action of, on hydroxylamine (RASCHIG), ii, 225.

reactions of nitrous acid with (RASCHIG), ii, 146.

**Sulphites**, catalytic oxidation of (REINDERS and VLES), ii, 567.

action of, on nitro and nitroso compounds (RASCHIG), i, 239.

analysis of mixtures of sulphides, thiosulphates and (KURTENACKER and BITTNER), ii, 239.

determination of, by the action of oxidising agents (HENDRIXSON), ii, 1001.

acid, combination of ethylenic hydrocarbons with (KOLKER and LAPWORTH), i, 353.

action of, on nitro and nitroso compounds (RASCHIG), i, 239.

**Sulphuric acid**, catalytic action of platinum in the contact process for (CLARK, McGRATH, and JOHNSON), ii, 1176.

passage of an alternating current through (LATTEY), ii, 979.

partial pressures of water in aqueous solutions of (GREENEWALT), ii, 493.

vapour pressure of aqueous solutions of (GROLLMAN and FRAZER), ii, 398.

absorption of hydrochloric acid by (CUPE), ii, 655.

free energy of, in sulphate solutions (HARNED and STURGIS), ii, 538.

solvolysis of salts in (DAVIDSON), ii, 505.

reduction of, to hydrogen sulphide (VILA), ii, 148.

**Sulphates**, formation of, from thiosulphates by soil bacteria (GUITTONNEAU), ii, 1218.

viscosity of solutions of (GRUNERT), ii, 859.

action of oxidising agents on, and their determination (HENDRIXSON), ii, 712.

determination of, volumetrically (KLINKE), ii, 239.

determination of, in plant sap (GORTNER and HOFFMAN), i, 485.

## Sulphur:—

**Persulphuric acid**, electrolytic preparation of (MAZZUCHELLI), ii, 214.

**Persulphates**, reaction between iodides and, in gelatin (RAWLING and GLASSETT), ii, 561.

**Thiosulphates**, formation of, by microorganisms in soils (GUITTONNEAU), i, 766.

conversion of, into sulphates by soil bacteria (GUITTONNEAU), i, 1218.

reduction of ferric salts by (HOLUTA and MARTINI), ii, 306, 702.

standardisation of solutions of (DIMITROV), ii, 598.

analysis of mixtures of sulphides, sulphites, and (KURTENACKER and BITTNER), ii, 239.

determination of, in alkali and alkaline earth sulphides (SCHULEK), ii, 327.

**Thionic acids**, constitution of (VOGEL), ii, 1189.

**Polythionic acids**, preparation, constitution, and properties of (RASCHIG), ii, 229, 230.

determination of (KURTENACKER and BITTNER), ii, 434.

**Polythionates** (KURTENACKER and KAUFMANN), ii, 1189, 1190.

formation and decomposition of (FOERSTER), ii, 148, 701; (FOERSTER and RIESENFELD), ii, 229.

**Dinitrososulphonates** (RASCHIG), ii, 226.

**Sulphur organic compounds** (SCHÖNBERG, ROSENBAACH, KRÜLL, and OSTWALD), i, 1300.

**Sulphur phenyl chloride**. See Benzene, chlorothiol.

**Sulphides**, cyclic (v. BRAUN, BAYER, and KAISER), i, 1445.

**Polysulphides**, organic (THOMAS and HARDING), i, 4, 113.

**Sulphurous acid**, organic derivatives, constitution of (RASCHIG), i, 245.

**Thiosulphates**, organic (HELLER), i, 313.

## Sulphur determination:—

determination of (KÜHL), ii, 156.

determination of, microchemically (GEILMANN), ii, 1000.

determination of, in polysulphides (KURTENACKER and BITTNER), ii, 433.

determination of, in soils (WOLKOFF), i, 224.

**Sulphur-blue**, constitution of (BINZ and KÄTH), i, 445.

**Sulphuric and Sulphurous acids**. See under Sulphur.

**Sunlight**, tropical, photosynthesis in (DHAR and SANYAL), ii, 884.

**Suprarenals**, cholesterol content of (PARHON and MARZA), i, 1346.

**Suprarenal powders**, detection and determination of adrenaline in (BAILLY), ii, 248.

**Surfaces**, thermodynamics of (GAY), ii, 539.

**Surface energy** and adsorptive power of solids (ILJIN), ii, 856.  
and adsorption at phase boundaries (ILJIN), ii, 958.

**Surface tension** (BRILLOUIN), ii, 496.  
determination of (ДУ НОУР), ii, 279 ;  
(CARVER and HOVORKA), ii, 647 ;  
(MOLODYI and PAVLOV), ii, 1142.  
from capillary rise (SUGDEN), ii, 497.  
cause of (KENNARD), ii, 1046, 1148 ;  
(ADAM), ii, 1046.  
and the scattering of light by liquids (RAMAN and RAMDAS), ii, 952, 1046.  
relation between heat of vaporisation and (PLACINTEANU), ii, 89.  
relation between foaming power and (OSTWALD and STEINER), ii, 771.  
effect of concentration on (SCHECHTMANN), ii, 1148.  
and surface energy (WILLIAMS), ii, 386.  
during esterification (CAUQUIL), ii, 964.  
of aqueous solutions against oils (HOWARD and SOLLMAN), ii, 109.  
of higher fatty acids (FRUMKIN), ii, 856.  
measurement of, in biological fluids (BRINKMAN and VON DER VELDE), i, 468.  
of crystals against saturated solutions (SOEP), ii, 1046.  
of dilute electrolytes (WAGNER), ii, 387.  
of liquid films (MARCELIN ; DRÉLAPLACE), ii, 772.  
at interface of liquids (ДУ НОУР), ii, 647.  
of salt solutions, effect of capillary-active substances on (SEITH), ii, 961.  
negative (ADAM and JESSOP), ii, 772.

**Swelling** (CLARKE), ii, 863.  
measurement of (THIESSEN and CARIUS), ii, 520.  
effect of alcohol on (LOEBENSTEIN), ii, 520.  
of colloids (RIETZ), ii, 520 ; (KATZ and MARK), ii, 566.  
(MILNENGAFF and HALL), ii, 520.

**Symmetry**, tetrahedral and octahedral, tridentate groups in (SMITH), ii, 841.

**Syphilis** (FORDYCE, ROSEN, and MYERS), i, 189, 611.  
action of bismuth in (LEVADITI, NICOLAU, SALGUE, and SCHOEN), i, 463.  
effect of "salluen" in (BERING), i, 858.

**Systems**, critical state for (GAY and PERRAKIS), ii, 669.  
binary. See Binary systems.  
disperse, viscosity of (OSTWALD), ii, 392.  
giving colour changes (v. WEIMARN), ii, 390.  
heterogeneous, velocity of reaction in, in relation to rate of stirring (KLEIN), ii, 802.  
conjugated, additive character of (JONESCU), i, 1153.  
metastable, velocity of transformation of, in relation to temperature (STEPANOV), ii, 645.

## T.

**Tadpoles**, effect of carbamide on the nutrition of (KŘÍŽENECKÝ and PODHRADSKÝ), i, 612.

**Taka-diaxase**, hydrolysis by (HATANO), i, 201.  
lipase from (OGAWA), i, 103.

**Taka-esterase** (WILLSTÄTTER and KUMAGAWA), i, 1213.

**Taka-rennin** (HATANO), i, 102.

**Tale** from Armenia (DITTLER), ii, 323.

**Tallow**, Rambutan, *n*-eicosoic acid from (MORGAN and HOLMES), i, 777.

**α(-)-Talose**, and its derivatives (v. BRAUN and BAYER), i, 1382.

**Talosebis(diphenylmethanediethyl)-dihydrazone** (v. BRAUN and BAYER), i, 1382.

**Tangentimeter** (LATSHAW), ii, 428.

**Tannins** (FREUDENBERG and BLÜMMEL), i, 51 ; (FREUDENBERG, FIKENTSCHER, and HARDER), i, 419 ; (FREUDENBERG, FIKENTSCHER, and WENNER), i, 692 ; (FREUDENBERG, FIKENTSCHER, HARDER, and SCHMIDT), i, 1165.  
autoxidation of (TSCHIRCH), i, 856.  
reaction between carbohydrates and (STOCKS and GREENWOOD), i, 1185.  
precipitation of gelatin by (SMORODINCEV and ADOVA), i, 847.

**oakwood** (FEIST and BESTERHORN), i, 566.  
in ripening vine-shoots (PICARD), i, 346.

- Tannins**, analysis of, with ferrous tartrate reagent (WARE), ii, 444.  
 detection of, by the ferric citrate test (WARE), ii, 905.  
 detection of, in drugs (WARE), ii, 1209.  
 determination of, with cinchonine (HOOPER), ii, 443.
- Tantalum**, electron emission from (DUSHMAN, ROWE, EWALD, and KIDNER), ii, 345.
- Tantalum trichloride**, derivatives of (RUFF and THOMAS), ii, 1187.  
*pentachloride*, reduction of (RUFF and THOMAS), ii, 1187.
- Tantalic acid**, and its alkali salts (JANDER and SCHULZ), ii, 701.
- Tantalum detection, determination, and separation** :—  
 detection and determination of, and its separation from niobium (POWELL and SCHOELLER), ii, 1096.  
 determination of, and separation from iron (PIED), ii, 442.
- Tar**, low temperature, aromatic hydrocarbons in (KRUBER), i, 1137.
- Taraktogenic acid**, and its silver salt (HASHIMOTO), i, 1234.
- Tartaric acid**, preparation of (MILAS and TERRY), i, 780.  
 rotatory power of (VLIS and VELLINGER), ii, 964.  
 in relation to hydrogen-ion concentration (VLIS and VELLINGER), i, 356.  
 rotatory dispersion of derivatives of (AUSTIN and PARK), ii, 1028.  
 dissociation constants of (BRITTON), ii, 977.  
 second dissociation constant of (PAUL), ii, 116.  
 photochemical reaction between bromine and (GHOSH and MUKHERJEE), ii, 1179.  
 salts, administration and excretion of (SIMPSON), i, 1211.  
 amine antimonyl salts (CHRISTIANSEN and NORTON), i, 654.  
 aniline trihydrogen salt (RAMBECH), i, 385.  
 arsenyl salts with organic bases (DEBUQUET), i, 973.  
 lead salt, solubilities of (AUERBACH and WEBER), i, 1130.  
 potassium and sodium salts, hydrates of (LOWRY and MORGAN), ii, 26.  
 potassium sodium salt (*Rochelle salt*), dielectric fatigue in (VALASEK), ii, 1118.  
 vapour pressure of (LOWRY and MORGAN), ii, 26.  
 properties of crystals of (ISELY; VALASEK), ii, 23.
- Tartaric acid**, sodium tribismuthyl salt (MASCHMANN), i, 527.  
 distinction of citric acid from (PARRI), ii, 162.  
 detection of, in tissues (KLEIN and WERNER), i, 871.  
 determination of (FRANÇOIS and LORMAND), ii, 75.  
 determination of, oxidimetrically (TÄUFEL and WAGNER), ii, 1007.
- meso-Tartaric acid**, hydrate of (AMADORI), i, 511.
- Tartarobismuthic acid**, sodium potassium salt, action of, on liver catalase (MAUBERT, JALOUSTRIE, LEMAY, and ANDREOLY), i, 614.
- Taurine**, methylation and acetylation of (TERAOKA), i, 1390.
- Tautomerism and additive reactions** (INGOLD), i, 357.  
 and the mobility of hydroxyl groups (FARROW and INGOLD), i, 155.  
 of dyads (INGOLD), i, 779; (GRIFFITHS and INGOLD), i, 1190.  
 of heterocyclic compounds (HELLER, BUCHWALDT, FUCHS, KLEINICKE, and KLOSS), i, 1323.  
 keto-enolic (KAUFMANN and LIEPE), i, 1241.  
 ring-chain (DUTT and THORPE), i, 140; (KON, SMITH, and THORPE), i, 509; (ROTHSTEIN, STEVENSON, and THORPE), i, 884; (BAKER), i, 916.  
 three-carbon (KON and LINSTADT), i, 506.  
 three-carbon, in the cyclopropane series (GOSS, INGOLD, and THORPE), i, 549.
- Teeth**, calcium salts in (LIESEGANG), i, 607.  
 effect of fluorides in diet of rats on (MCCOLLUM, SIMMONDS, BECKER, and BUNTING), i, 861.
- Telluridiacetic acid**, *dichloro*- (MORGAN and DREW), i, 530.
- Tellurium**, molecular weight of (JOUNIAUX), ii, 137.  
 optical constants of (MILLER), ii, 751.  
 reduction potential of, and the energy and heat of formation of the dioxide (SCHUMANN), ii, 670.  
 vapour pressure of (DOOLAN and PARTINGTON), ii, 278.  
 crystal structure of (SLATTERY), ii, 389.  
 hydrosols, coagulation of, by electrolytes (DOOLAN), ii, 293.
- Tellurium compounds**, acid nature of (KARVE), ii, 1188.
- Tellurium tetrachloride**, interaction of acetic anhydride with (MORGAN and DREW), i, 530.

- Tellurium suboxide** (DAMIENS), ii, 316.  
*dioxide*, fused, electrocapillarity of (SIMK and KADLOVA), ii, 678.
- Tellurium organic compounds** (MORGAN and TAYLOR), i, 634.
- Tellurium  $\beta$ -diketones**, bactericidal action of (MORGAN, COOPER, and CORBY), i, 206.
- O*-ethyl*diisobutyl*methane trichloride (MORGAN and TAYLOR), i, 634.
- n*-nonylacetone trichloride (MORGAN and TAYLOR), i, 634.
- Tellurium determination and separation** :—  
determination of, and separation from selenium (LENHER and KAO), ii, 434.
- Tellurodiacetic acid**, and its salts (MORGAN and DREW), i, 530.
- Temperature**, relation of, to density (HERZ), ii, 494, 1141.  
corresponding, of solids (BRODSKY; LAFUMA), ii, 26.  
high, equilibria at (PUSHIN and GREBENSHNIKOV), ii, 38; (V. WARTENBERG), ii, 576.  
low, constant (SLIGH), ii, 756.  
thermodynamic, of gases (WERTHEIMER), ii, 784.
- Temperature coefficients and mechanism of chemical reactions** (RICE, FRYLING, and WESOLOWSKI), ii, 48.
- Terephthalic acid**, 2-amino- and 2-nitro-, diethyl and diethylaminoethyl esters, and their hydrochlorides (SODERMAN and JOHNSON), i, 814.
- Terephthaloyl chloride**, nitro- (SODERMAN and JOHNSON), ii, 814.
- Ternary systems**, equilibria in (SCHREINEMAKERS), ii, 869.  
graphic representation of (URAZOV), ii, 788.
- Terpenes** (VESTERBERG and BORGE), i, 252; (KONDAKOV and SAPRIKIN), i, 1168, 1292.
- Terpenes**, and their derivatives, catalytic hydrogenation of (ARMSTRONG and HILDITCH), ii, 563.  
autoxidation of (TSCHIROH), i, 356.  
catalytic oxidation of (RAO), i, 687.  
dicyclic, structure of (SZAWINSKI), i, 48.
- Terpene compounds** (RUZICKA and CAPATO), i, 943.  
higher (RUZICKA and PFEIFFER; RUZICKA, MEYER, and PFEIFFER), i, 1419.
- $\alpha$ -Terpineol**, resolution of, and its esters (FULLER and KENTON), i, 48.
- Terpineols**, relation between pinenes and (DALLÉPINE), i, 564.
- Testicles**, of cattle, lipoids in (SORG), i, 457.
- Testicles**, cholesterol content of (PARHON and MARZA), i, 1346.  
effect of injection of emulsions of, on metabolism (KOBENCHEVSKY and CARR), i, 1513.  
spermine phosphate from (ROSENHEIM), i, 180.
- Test-tube stand**, improved (PATTERSON), ii, 151.
- Tetany**, etiology of, in children (ANDERSON and GRAHAM), i, 330.  
effect of cod-liver oil on metabolism in (LIU), i, 725.  
parathyroid, and its effect on calcium of the blood (CAMERON and MOORHOUSE), i, 857.
- Tetra-acetoxydichlorodititanium chloride** (GIUA and MONATH), i, 531.
- Tetra-acetoxydihydroxydititanium chloride** (GIUA and MONATH), i, 531.
- Tetra-acetyldextrose-1-pyridinium tetra-acetyldextrose  $\zeta$ -sulphate** (OHLE and BOURJAN), i, 634.
- Tetra-acetylmucic acid**, salts and methyl ester of (SIMON and GUILLAUMIN), i, 116.
- Tetra-allylammonium iodide**, compound of iodoform with (STEINKOPF and BESSARITSCH), i, 495.
- $\alpha$ -Tetra-amylose nitrates** (FRINGSHEIM, LEIBOWITZ, and SILMANN), i, 1244.
- Tetra-anhydrotetrakisdiiphenylgermanediol** (MORGAN and DREW), i, 1197.
- Tetra-anisylethylene sulphide** (SCHÖNBERG, ROSENBAACH, KRÜLL, and OSTWALD), i, 1301.
- Tetra-arsenoacetic acid**, sodium salt, therapeutic action of (BARBOUR, RINDOUT, and CLAYDON), i, 733.
- Tetrabenzylmethane** (TROTMAN), i, 383.
- Tetra-(4-carbethoxy-2:3-dimethylpyrryl) ethane** (FISCHER and BELLER), i, 1333.
- Tetra-(4-carbethoxy-2:3-dimethylpyrryl) ethylene** (FISCHER and BELLER), i, 1333.
- Tetracarboethoxyellagic acid** (FEIST and BESTEHORN), i, 566.
- Tetrachlorodioxyruthenic acid**. See under Ruthenium.
- Tetradecenoic acid** from sperm oil (TSUJIMOTO), i, 1128.
- 9:10-Tetraethyl- $\Delta$ amino-9:10-dihydroanthracene, 1:5-dichloro-** (BARNETT, COOK, and MATTHEWS), i, 1140.
- Tetraethylammonium iodide**, concentration cells containing (GRANT), ii, 301.  
compound of iodoform and (STEINKOPF and BESSARITSCH), i, 495.

- $\beta$ - $\gamma$ -6-Tetraethylglucose (HESS and SALZMANN), i, 1383.
- Tetraethylmethane. See  $\gamma\gamma$ -Diethylpentane.
- Tetraethylsuccinic acid, imide and nitrile of (DOX), i, 797.
- Tetrahydroacridine, and amino-, chloro-, and nitro-, and their derivatives (PERKIN and SEDGWICK), i, 63.
- Tetrahydroacridone, amino- and nitro-derivatives, and their derivatives (PERKIN and SEDGWICK), i, 64.
- 1:2:3:4-Tetrahydroanthracene, derivatives of (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 123.
- Tetrahydroanthranil, *C*-amino-, and its derivatives (v. AUWERS, BAHR, and FRIESE), i, 312.
- 1:2:3:4-Tetrahydroanthraquinone (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 128.
- Tetrahydrobenzothiochromanones (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.
- Tetrahydrobenzoxazoles (v. AUWERS, BAHR, and FRIESE), i, 308.
- Tetrahydroberberine, 6-nitro- (HAWORTH and PERKIN), i, 970.
- Tetrahydrocarbazole, derivatives of (LINNELL and PERKIN), i, 62.
- Tetrahydrofurfuraldehyde (SCHREIBLER, SOTSCHER, and FRIESE), i, 1298.
- Tetrahydrofurylbutylcarbinol, and its acetate (PIERCE and ADAMS), i, 825.
- Tetrahydro- $\psi$ -glucal diacetate (BERGMANN), i, 887.
- Tetrahydroindazoles (v. AUWERS, v. SASS, and WITTEKINDT), i, 1181.
- Tetrahydroindene (ZELINSKI and BORISOV), i, 122.
- Tetrahydrojatrochizine, derivatives of (SPÄTH and DUSCHINSKY), i, 1313.
- Tetrahydrolupulon, and its salts (WÖLLMER), i, 691.
- Tetrahydro- $\alpha$ -methylmorphimethine, chloro-, salts of (SPEYER and KOULEN), i, 69.
- Tetrahydro- $\gamma$ -methylmorphimethine, and its derivatives (SPEYER and KOULEN), i, 60.
- Tetrahydro- $\alpha$ -methylmorphimethine-*N*-oxide-sulphonic acids (SPEYER and KOULEN), i, 60.
- 1:2:3:4-Tetrahydro-1-methyl-2-naphthoic acid (v. AUWERS and MÖLLER), i, 404.
- Tetrahydronaphthalene, action of aluminium chloride with (SCHROETER, VAN HULLE, GLUSCHKE, STIER, and MÜLLER), i, 126.
- Tetrahydronaphthalene, *ac*-2-nitro-1-oximino- (STRAUS and EKHard), i, 1138.
- Tetrahydronaphthalenes, bromonitro- (VESELY and CHUDOZILOV), i, 1056.
- 4-*ar*-Tetrahydronaphthalene, 4-*a*-nitro- (ROWE and TARBETT), i, 317.
- $\alpha$ -*ar*-Tetrahydronaphthaleneazo- $\alpha$ -naphthylamine (ROWE and TARBETT), i, 317.
- $\alpha$ -*ar*-Tetrahydronaphthaleneazo-*ar*-tetrahydro- $\alpha$ -naphthylamine (ROWE and TARBETT), i, 317.
- 1:2:3:4-Tetrahydronaphthalene-1:2-carboxylic acid, and its anhydride (v. AUWERS and MÖLLER), i, 404.
- cis*-Tetrahydronaphthalenediols, borates of (HERMANS), i, 501.
- ar*-Tetrahydro- $\beta$ -naphthol, derivatives of (CHEMISCHE FABRIK VON HEYDEN), i, 1407.
- 1-Tetrahydronaphthoylethylmalonic acid, potassium hydrogen salt (SCHROETER, VAN HULLE, and MÜLLER), i, 130.
- 2-Tetrahydronaphthoylethylmalonic acid, and its salts and ethyl ester (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 128.
- $\beta$ -1-Tetrahydronaphthoylethylpropionic acid, (SCHROETER, VAN HULLE, and MÜLLER), i, 130.
- $\beta$ -2-Tetrahydronaphthoylethylpropionic acid, salts of (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 128.
- 1:2:3:4-Tetrahydronaphthyl-1-acetic acid, and its copper salt and ethyl ester (SCHROETER, ZADEK, and HOFFMANN), i, 677.
- 1:2:3:4-Tetrahydronaphthyl-1-acetic acid, 1-hydroxy-, and its ethyl ester and hydrazide (SCHROETER, ZADEK, and HOFFMANN), i, 677.
- $\gamma$ -1-Tetrahydronaphthyl-*n*-butyric acid (SCHROETER, VAN HULLE, and MÜLLER), i, 131.
- $\gamma$ -Tetrahydronaphthylcrotonolactone (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 128.
- $\beta$ -1-Tetrahydronaphthylthiolpropionic acid (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.
- Tetrahydronaphthylene-1-acetic acid, and its ethyl ester (SCHROETER, ZADEK, and HOFFMANN), i, 677.
- 1:2:3:4-Tetrahydrophenanthrene, spectrochemistry and structure of (v. AUWERS and KRAUL), i, 900.
- and its picrate (SCHROETER, VAN HULLE, and MÜLLER), i, 131.

- 4-Tetrahydroquinolone, preparation of (BRITISH DYE STUFFS CORPORATION, LTD., PERKIN, and CLEMO), i, 697.
- Tetrahydrostigmastrol, and its acetate (WINDAUS and BRUNKEN), i, 394.
- Tetrakis(trimethylstibine)palladium chloride (MORGAN and YARLEY), i, 378.
- Tetrakis(trimethylstibine)platinum salts (MORGAN and YARLEY), i, 378.
- "Tetralin," surface tension of (GRUNMACH and SCHWEIKERT), ii, 31.
- 5-Tetralone. See 1-Keto-1:2:3:4-tetrahydronaphthalene.
- Tetramercuriaceto-*o*-toluidide acetate (ROSSI and BOOCHI), i, 601.
- $\omega$ :3:4:5-Tetramethoxyacetophenone, and its semicarbazone (PRATT and ROBINSON), i, 423.
- 1:2:6:7-Tetramethoxy-9-anthrone (JACOBSON and ADAMS), i, 1077.
- 3:3':4':5'-Tetramethoxybenzoylcoumaranone, bromo- (DEAN and NIERENSTEIN), i, 963.
- Tetramethoxybenzoyldihydrocoumarones, and their phenylhydrazones (DEAN and NIERENSTEIN), i, 281.
- 6:7:2':3'-Tetramethoxy-2-benzoyl-1:2-dihydroisoquinoline, 1-cyano- (HAWORTH and PERKIN), i, 968.
- Tetra-*p*-methoxybenzylpinacolin (TIFENEAU and ORSKOV), i, 680.
- Tetramethoxybenzoyldihydrocoumarones,  $\alpha$ -hydroxy-, and their acetyl derivatives (DEAN and NIERENSTEIN), i, 281.
- 6:7:2':3'-Tetramethoxy-2-benzyl-1:2-dihydroisoquinoline, 1-cyano- and 1-hydroxy- (HAWORTH and PERKIN), i, 968.
- 6:7:3':4'-Tetramethoxy-2-benzyl-1:2-dihydroisoquinoline, 1-cyano- and 1-hydroxy- (HAWORTH, PERKIN, and RANKIN), i, 969.
- 6:7:2':3'-Tetramethoxy-2-benzyl-3:4-dihydroisoquinolinium iodide (HAWORTH and PERKIN), i, 968.
- 6:7:3':4'-Tetramethoxy-2-benzyl-3:4-dihydroisoquinolinium salts (HAWORTH, PERKIN, and RANKIN), i, 969.
- 6:7:2':3'-Tetramethoxy-2-benzyl-3:4-dihydro-1-isoquinolone (HAWORTH and PERKIN), i, 968.
- 3:3':4':5'-Tetramethoxybenzylidene-coumaranone, and bromo-, and its dibromide (DEAN and NIERENSTEIN), i, 952.
- 6:7:2':3'-Tetramethoxy-2-benzyl-1-methyl-1:2:3:4-tetrahydroisoquinoline, and its salts (HAWORTH and PERKIN), i, 968.
- 6:7:2':3'-Tetramethoxy-2-benzyl-1-nitro-methyl-1:2:3:4-tetrahydroisoquinoline (HAWORTH and PERKIN), i, 968.
- 6:7:3':4'-Tetramethoxy-2-benzyl-1-nitro-methyl-1:2:3:4-tetrahydroisoquinoline (HAWORTH, PERKIN, and RANKIN), i, 969.
- 6:7:2':3'-Tetramethoxy-2-benzyl-1-iso-quinoline (HAWORTH and PERKIN), i, 968.
- 6:7:3':4'-Tetramethoxy-2-benzyl-1-iso-quinoline (HAWORTH, PERKIN, and RANKIN), i, 969.
- 6:7:3':4'-Tetramethoxy-2-benzylisoquinolinium bromide and iodide (HAWORTH, PERKIN, and RANKIN), i, 969.
- 6:7:2':3'-Tetramethoxy-2-benzyl-1:2:3:4-tetrahydroisoquinoline, and 1-cyano- and 1-hydroxy-, and their salts (HAWORTH and PERKIN), i, 968.
- 6:7:3':4'-Tetramethoxy-2-benzyl-1:2:3:4-tetrahydroisoquinoline, and 1-cyano- and 1-hydroxy- (HAWORTH, PERKIN, and RANKIN), i, 969.
- 6:7:2':3'-Tetramethoxy-2-benzyl-1:2:3:4-tetrahydroisoquinoline-1-carboxylamide (HAWORTH and PERKIN), i, 969.
- Tetramethoxydibenzoyldimethylbenzenes (DE DIESBACH and STREBEL), i, 1486.
- 5:7:3':4'-Tetramethoxyflavan, 4-hydroxy-, and its acetyl derivative (NIERENSTEIN), i, 279.
- 4:3':4':5'-Tetramethoxyflavanone, and isonitroso- (DEAN and NIERENSTEIN), i, 952.
- 5:7:2':4'-Tetramethoxyflavylium salts (PRATT and ROBINSON), i, 825.
- 4:4':7':7'-Tetramethoxyindigotin (RUENSTEIN), i, 1279.
- 3:7:3':4'-Tetramethoxy-2-styrylchromone, 5-hydroxy- (ROBINSON and SHINODA), i, 1302.
- Tetramethylacetonedicarboxylic anhydride. See  $\beta$ -Keto- $\alpha$ - $\gamma$ -tetramethylglutaric anhydride.
- 4:4'-Tetramethyldiaminobenzophenone, additive compounds of, with resorcinol and  $\alpha$ -naphthol (PFEIFFER, GOEBEL, and ANGERN), i, 262.
- 9:10-Tetramethyldiamino-9:10-dihydroanthracene, 1:5-dichloro- (BARNETT, COOK, and MATTHEWS), i, 1140.
- pp*-Tetramethyldiaminodiphenyl (VORLÄNDER), i, 1258.
- 9:10-Tetramethyldiaminodiphenyl-9:10-dihydroanthracene (BARNETT, COOK, and MATTHEWS), i, 648.
- 9:10-Tetramethyldiaminodiphenyl-9:10-dihydroanthracene, 1:5-dichloro- (BARNETT, COOK, and MATTHEWS), i, 1140.

- Tetramethylammonium** *tetrachloro-*ferate (REMY and ROTHE), ii, 1039.
- Tetramethylarsonium** stannic iodide (AUGER and KARANTASSIS), ii, 814.
- Tetramethylbenzopyrans** (CLAISEN), i, 277.
- 9:10-Tetramethyldianilinoanthracene**, 1:5-dichloro- (BARNETT, COOK, and MATTHEWS), i, 1399.
- 2:2':5:5'-Tetramethyl-4:4'-dipyrrylmethane-3:3'-dicarboxylic acid**, ethyl ester (FISCHER and NENITZESCU), i, 833.
- Tetramethyldistannane**, disodium derivative (KRAUS and GREER), i, 1394.
- N:N':N'':N'''*-Tetramethyl-*N*-ethylguanidine** (LECHER, GRAF, and GNÄDINGER), i, 1393.
- Tetramethylgalactose** (HAWORTH, RUELL, and WESTGARTH), i, 117.
- Tetramethylglucose**, mutarotation of, in various solvents (LOWRY and RICHARDS), i, 886.
- Tetramethylguanidines**, preparation of (SCHENCK and V. GRAEVENITZ), i, 377.
- Tetramethylhæmatoporphyrin** ester, isomerism of (FISCHER and MÜLLER), i, 846.
- Tetramethylmethylgalactoside** (HAWORTH, RUELL, and WESTGARTH), i, 117.
- 3:3':4:5'-Tetramethylmyricetin**, and its diacetyl derivative (KALFF and ROBINSON), i, 423.
- Tetramethylnaphthalene**, and its picrate (BRINER, PLÜSS, and PAILLARD), i, 249.
- Tetramethylquinamide** (KARKER, WIDMER, and KISO), i, 673.
- 1:3:7:9-Tetramethyluric acid**, action of alkalis on (GATEWOOD), i, 1189.
- Tetranaphthylenecyclooctatetraene**. See *Dehydrofluorocyclene*.
- Tetra-oxymethylene**, and its diacetate (STAUDINGER and LÜTHY), i, 361.
- Tetraphenylcarbazide** (FEIGL), i, 170.
- 1:3:4:6-Tetraphenyl-1:4-dihydro-1:2:4:5-tetrazine**, 1:4-*di-p*-bromo-, and 1:4-*o*-2':4'-*tetrabromo*- (CHATTAWAY and WALKER), i, 930.
- Tetraphenyldipyrroxonium** *perbromide* (ARNDT, SCHOLZ, and NACHTWEY), i, 58.
- 2:6:2':6'-Tetraphenyl-4:4'-dipyrylene** (ARNDT, SCHOLZ, and NACHTWEY), i, 58.
- Tetraphenylgermane** (MORGAN and DREW), i, 1197.
- Tetraphenyl-1-methylpyrrole** (PERKIN and PLANT), i, 843.
- Tetraphenylsuccinodilactones**, 2:2-dihydroxy-. See 2:2'-Diketo-3:3'-diphenyl-3:3'-dicoumaranyls.
- Tetraphenyl*Δ*thiopyrylene** (ARNDT, NACHTWEY, and PUSCH), i, 1312.
- Tetrapropylammonium** iodide, compounds of, with bromoform, chloroform, and iodoform, and the *tri*iodide (STEINKOPF and BESSARITSCH), i, 495.
- Tetrazole**, cyano-, action of hydrazine on (OLIVIERI-MANDALÀ), i, 78.
- Tetrolaldehyde** *p*-nitrophenylhydrazone (V. AUWERS and DANIEL), i, 1181.
- Tetryl**. See Phenylmethylnitroamine, *trinitro*-.
- Textiles**, action of ultra-violet light on (HEERMANN), ii, 144.  
absorption of water by (SHORTER), ii, 789.
- Thallium**, absorption spectrum and dispersion of the vapour of (NARAYAN, GUNNAIYA, and RAO), ii, 5; (RAO), ii, 455.  
spark spectrum of (RAO), ii, 610; (CARROLL), ii, 1101.  
vapour, resonance radiation from (NARAYAN and RAO), ii, 338.  
transformation of  $\alpha$ - into  $\beta$ - (ASAHARA), ii, 438, 645.  
effect of allotropy on growth of crystals of (ASAHARA), ii, 637.  
possible transformation of lead into (RUSSELL), ii, 924.
- Thallium alloys** with cadmium and lead (DI CAPUA), ii, 737.
- Thallium compounds**, isomorphism of, with those of rare earth metals (ZAMBONINI and CAROBBI), ii, 272.
- Thallous bromide** and chloride, crystal structure of (LUNDE), ii, 941.  
chloride, activity coefficient of aqueous solutions of (RANDALL and VANSELOW), ii, 33.  
double selenates (LINDSLEY and DENNIS), ii, 584.  
selenide (MOSER and ATYNSKI), ii, 583.  
sulphate, double salts of neodymium sulphate and (ZAMBONINI and CAGLIOTI), ii, 1135.  
cobalt and nickel sulphates (TUTTON), ii, 749.
- Thallous lanthanum sulphates** (ZAMBONINI and CAROBBI), ii, 579.  
sulphide, equilibria of, with arsenic and lead sulphides (CANNERI and FERNANDES), ii, 887.  
telluride (BRUKL), ii, 895.
- Thallic thallous halides** (BERRY), ii, 59.

**Thallium organic compounds:—**

Thallium alkyl and aryl halides and salts (KRAUSE and V. GROSSE), i, 378, 1252.

Thebaine, constitution of (WIELAND and KOTAKE), i, 1448.

action of cyanogen bromide on (SPEYER and ROSENFELD), i, 962.

Thebenone, and its derivatives (WIELAND and KOTAKE), i, 1093.

Theobromine, and its derivatives, salts of (KNOLL & Co.), i, 828.

Theophylline, salts of (KNOLL & Co.), i, 828.

riboside, triacetylriboside, xyloside, and triacetylxyloside (LEVENE and SOBOTKA), i, 1463.

Therapeutic compounds (WELLCOME FOUNDATION, LTD., GRAY, and HENRY), i, 1446.

Thermal conductivity of wires and rods (BARRATT and WINTER), ii, 756.

expansion of fused salts (LORENZ and HERZ), ii, 950.

of alkali halides (HENGLEIN), ii, 950.

reactions, temperature-coefficients of (DHAR), ii, 135.

and photochemical reactions (DHAR and MUKERJI), ii, 809.

Thermochemical data (SWIENTOSLAWSKI), ii, 540, 1139; (SWIENTOSLAWSKI and POPOV; SWIENTOSLAWSKI and STARCZEWSKA), ii, 1139.

Thermochemistry of diazo compounds (SWIENTOSLAWSKI; SWIENTOSLAWSKI and BLASZKOVSKA), ii, 1044.

of organic compounds (PARKS and KELLEY), ii, 949.

Thermodynamics, laws of, and the equation of state (KOLTSCHIN), ii, 1061.

third law of (WEBB), ii, 867.

Willard Gibbs' work on (MILLER), ii, 899.

of solutions of electrolytes (HARNED), ii, 977.

potentials in (FREUNDLICH and ERTSCH), ii, 873.

of surface action (GAY), ii, 539.

Thermo-electric power and the Hall coefficient (HRAFS), ii, 1135.

Thermo-electricity of electrolytes (THIELE), ii, 545.

Thermo-element, vacuum (MOLL and BURGER), ii, 613.

Thermometer, air differential (NOYES), ii, 896.

platinum-resistance (VAN DUSEN), ii, 899.

Thiazine red, preparation of (PROESCHER and KREMER), i, 597.

Thiazine series, preparation of keto derivatives of (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 596.

Thiazoles (BOGERT and CHERTCOFF), i, 315.

Thiazole colouring matters (BOGERT and CHERTCOFF), i, 80.

Thiazole-purple (KÖNIG and MEIER), i, 705.

*α*-Thienylmethyl bromide (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.

*α*-Thienylmethylallylaniline, and its salts (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.

*α*-Thienylmethylbenzylmethylamine, and its salts (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.

*α*-Thienylmethylfurfurylmethylamine, and its salts (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.

*α*-Thienylmethylthiocarbimide (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.

*α*-Thienylmethyltrimethylammonium salts (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.

Thioamides, action of sulphur chloride on (ISHIKAWA), i, 1149.

condensation of nitriles with (ISHIKAWA), i, 917, 1149.

*Thiobacillus thio-oxidans*, nutrition and physiology of (STARKEY), i, 1015.

Thiocarbamide (*thiourea*), constitution of (LECHER), i, 1390; (LECHER and HEYDWEILLER), i, 1392.

oxidation of, by charcoal (FREUNDLICH and FISCHER), ii, 307.

condensation of, with dihydroxyacetone and with methylglyoxal (SJOLEMA and SEEKLES), i, 1175.

Thiocarbamides, substituted (DATIN, BREWSTER, MALM, MILLER, MANEVAL, and SULTZBERGER), i, 1063.

aryl derivatives, reactions of, with sulphur and amines (LEVI), i, 445.

Thiocarbamide-diacetic acid, ethyl esters (JOHNSON and RENFREW), i, 583.

Thiocarbamide, formation of (SNEDKER), i, 885.

Thiocarbimides (*isothiocyanates*), formation of, from thiocyanates (BILLETTER), i, 1051.

aromatic substituted, addition of ethyl sodioacetacetate to (WORRALL), i, 244.

Thiocarbohydrazide, derivatives of (GUHA and DE), i, 599.

Thiocarbonic acid, *di-β*-naphthyl and pyrocatechyl esters (AUTENRIETH and HEFNER), i, 1876.

- Thiocarbonyl chloride**, preparation of, and its derivatives (AUTENRIETH and HEFNER), i, 1376.
- Thiocyanates**, conversion of, into thiocarbimides (BILLETTER), i, 1051.  
detection of, in organic matter (DANCKWORTT and PFAU), i, 196.  
detection and determination of, in presence of cyanides (SCHULEK), ii, 432, 712.  
determination of, bromometrically (OBERHAUSER), ii, 828.  
determination of, colorimetrically (K. C. and D. F. H. BAILEY), ii, 447.
- Thiocyanic acid**, potassium salt, reaction of ferric chloride with (BAILEY; BAILEY and KIDD), ii, 422.
- Thiocyanines** (KÖNIG and MEIER), i, 705.
- Thiocyanogen**, preparation of (KAUFMANN and KÖGLER), i, 1252.  
action of, on unsaturated compounds (SÖDERBÄCK), i, 899; (CHALLENGER and BOTT), i, 936.  
reaction of azoimide with (WILCOXON, MCKINNEY, and BROWNE), i, 1051.
- Thiodiazines** (BOSE), i, 167, 1465.
- Thiohydrates** (BILTZ and KEUNECKE), ii, 986.
- Thioindican**. See 3-Oxy(1)thionaphthen glucoside.
- Thioketones** (SCHÖNBERG, ROSENBAACH, KRÜLL, and OSTWALD), i, 1300.
- Thionacetanilide**, *m*-bromo- and *p*-iodo- (WORRALL), i, 244.
- Thionacetoanisidides** (WORRALL), i, 244.
- Thionaceto-*m*-toluidide** (WORRALL), i, 244.
- Thionaphthen**, hydrogenation of (FRICKE and SPILKER), i, 249, 1311.
- 2-Thionaphthen-9'-anthraceneindolig-none** (SANDER), i, 982.
- 3-Thionbenzoyldiphenyl-2:3-dihydro-1:2:4-triazoles** (FROMM and TRUKA), i, 704.
- Thionic acids**. See under Sulphur.
- Thionium compounds**, heats of formation of (TSHELINCEV), ii, 480.
- Thionmalono-*p*-anisidic acid**, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
- Thionmalono-*m*-bromoanilic acid**, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
- Thionmalono-*p*-chloroanilic acid**, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
- Thionmalono-*p*-iodoanilic acid**, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
- Thionmalono- $\alpha$ -naphthylamic acid**, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
- Thionmalono-*p*-phenetidic acid**, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
- Thionmalono-*m*-toluidic acid**, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
- 3-Thion-1:2:3:4-tetrahydro-1:2 4-benz-triazine**, and its derivatives (GUHA and RAY), i, 1462.
- Thiophen**, and its derivatives, spectrochemistry of (v. AUWERS and KOHLHAAS), i, 150.  
poisoning of catalysts by (KUBOTA and YOSHIKAWA), ii, 805.  
derivatives, synthesis of (CHRSZCZEWSKA), i, 956.
- Thiuronium salts**, constitution of (LECHER), i, 1390; (LECHER and HEYDWEILLER), i, 1392.
- Thorium**, preparation of (VAN ARKEL and DE BOER), ii, 1193.  
 $\beta$ -ray spectra of the disintegration products of (BLACK), ii, 922.  
velocity of  $\alpha$ -particles from (ROSENBLUM), ii, 463.  
emanation (BATSCHA), ii, 177.
- Thorium hydroxide**, precipitation of, electrometrically (BRITTON), ii, 1203.  
oxide (*thoria*), catalytic activity of (KOMATSU and TANAKA), i, 905.  
catalytic activity of reduced copper and nickel and (KOMATSU and MASUMOTO), ii, 1071.  
promoter action of, on catalytic nickel (RUSSELL and TAYLOR), ii, 1071.
- Thorium separation** :—  
separation of, from zirconium and rare earth metals (FERNANDES), ii, 426.
- Thorium-*B* + *C***, magnetic spectrum of  $\beta$ -rays of (YOVANOVITCH and D'ES-PINE), ii, 176; (POHLMEYER), ii, 347.
- Thorium-*B*, -*C*, and -*D***, spectra of (BLACK), ii, 177.
- Thorium-*X***, production of, by recoil (BRIGGS), ii, 922.  
determination of (GAZZONI), ii, 441.
- Thoron**. See Thorium emanation.
- Thrombin** (WÖHLISCH), i, 1486.  
theory of the action of (WÖHLISCH), i, 452.  
detection of, in blood (STUBER and KUHN), i, 452.  
detection of, in oxalate plasma (STUBER and LEE), i, 94.
- Thymine**, 4:5-dihydroxy- (BAUDISCH and DAVIDSON), i, 1100.

- Thymol**, surface tension of aqueous solutions of (EDWARDS), ii, 387.  
 catalytic reduction of (DOMINIKIEWICZ), i, 146.
- Thymol-blue**, dissociation constant of (HOLMES and SNYDER), ii, 325.
- Thymus**, histones of the (FELIX), i, 1208.
- Thyroglobulin**, precipitation reaction of (HEKTOEN and SCHULHOF), i, 1345.
- Thyroid**, pharmacology of preparations of (HAFFNER and KOMIYAMA), i, 1119.  
 absorption, distribution and determination of iodine in the (RABINOVITSCH and FRITH), i, 1488;  
 (ABELLES and POPPER; PICKWORTH), i, 1489.  
 iodine in the blood of (GLEY and CHEYMOL), i, 456.  
 lipases from (HERZFELD and ENGEL), i, 201.  
 goat's, iodine in (ARNOLD and GLEY), i, 325.  
 normal and diseased, constituents of (WEIR), i, 1491.
- Thyroidectomy**, fat and cholesterol in blood after (HEKSCHER), i, 999.
- Thyroxin**, ultra-violet absorption spectrum of, and its constitution (HICKS), ii, 473.
- Tiglic aldehyde phenylhydrazone** (v. AUWERS and KREUDER), i, 1454.
- Tin**, molecular weight of (JOUNIAUX), ii, 489.  
 absorption spectrum of the vapour of (NARAYAN and RAO), ii, 927.  
 absorption and arc spectra of (McLENNAN, YOUNG, and McLAY), ii, 454.  
 arc spectrum of (SPONER), ii, 454.  
 X-ray absorption coefficient of (WARBURTON and RICHTMYER), ii, 1103.  
 passivity of (ROTHMUND, EISENKOLB, and STEINHERZ), ii, 131.  
 electro-deposition of (SMERZ), ii, 677.  
 single crystal rods of, thermo-electric force of (BRIDGMAN), ii, 1136.  
 crystals, tensile strength of (POLANYI and SCHMID), ii, 752.  
 grey and white, specific heats of (COHEN and MOESVELD), ii, 950.
- Tin alloys**, electrolysis of (KREMMANN and v. REHENBURG), ii, 313.  
 heat of formation of (BILTZ and HOLVERSCHUIT), ii, 268.  
 with aluminium, electrolysis of (KREMMANN and DELLAOHER), ii, 679.  
 with bismuth and lead, hardness of (DE CAPUA), ii, 1051.  
 with copper (ISHARA), ii, 122.
- Tin alloys with copper**,  $\alpha$ -phase boundary in (STOCKDALE), ii, 973.  
 hardness of (BAUER and VOLLENBRUCK), ii, 104.  
 with mercury, electrolysis of (KREMMANN, KAPAU, and BUDAN), ii, 313.  
 with mercury and silver (TAMMANN and DAHL), ii, 502.  
 with molybdenum and nickel (PFAUTSCH), ii, 536.  
 with zinc, electrolysis of (KREMMANN and BAUKOVAC), ii, 679.
- Tin hydride**, preparation and properties of (PANETH and RABINOVITSCH), ii, 59;  
 (PANETH, HAKEN, and RABINOVITSCH), ii, 60.  
 pharmacology of (PANETH and JOACHIMOGLU), i, 197.  
 hydroxide, precipitation of, electrometrically (BRITTON), ii, 1203.  
 selenides (MOSER and ATYNSKI), ii, 584.  
 tellurides (BRUKL), ii, 895.
- Stannous chloride**, effect of neutral salts on the reaction of ferric chloride with (TIMOFEEV, MUCHIN, and GUREVITSCH), ii, 586.  
 iodide, properties of (FREUNDLER and LAURENT), ii, 1085.  
 photochemical properties of (FREUNDLER and LAURENT), ii, 22.  
 compounds of, with caesium and rubidium iodides (AUGER and KARANTASSIS), ii, 1182.
- Stannic chloride**, distillation of (RÖHRE), ii, 157.  
 weighting of silk with and its compounds with ethyl aminoacetate and acetic acid (FICHTER and REICHART), ii, 193.  
 compounds of, with  $\beta$ -diketones (DILTHEY), i, 1473.  
 iodide, complex compounds of (AUGER and KARANTASSIS), ii, 814.  
 additive compounds of hexamethylenetetramine and (SCAGLIARINI), i, 890.
- Tin organic compounds** (DRUCE), i, 798.
- Tin dimethyl**, derivatives of (KRAUS and GREER), i, 1394.  
 trimethyl, and its hydroxide and derivatives (KRAUS and SESSIONS), i, 1253;  
 (KRAUS and HARADA), i, 1254.  
 tetra-*p*-nitrophenyl (VORLÄNDER), i, 1256.
- Stannic halides**, compounds of, with diamines and polycarboxylic esters (HIEBER, BECKER, and WAGNER), i, 1325.

**Tin organic compounds:—**

Chloro-stannates and -stannites (DRUCE), i, 1096.

**Tin determination and separation:—**

determination of, electrometrically (FLEYSHER), ii, 243.

determination and separation of, in alloys (EVANS), ii, 826.

separation of antimony and (SACCARDI), ii, 159.

separation of antimony, copper, lead, and (LASSIEUR), ii, 328.

separation of, from tungsten (JILEK and LUKAS), ii, 242.

**Tissues**, hydrogen-ion concentration in (SCHMIDTMANN), i, 99.

colloidal processes in stimulation of (LASAREV), i, 1499.

effect of salts on the adsorption of colouring matters by (MANN), ii, 35.

absorption of salts by (STILES), ii, 31.

respiration of (TERROINE and ROOHE), i, 709.

animal. See Animal tissues.

normal, and cancer, reducing power of (VOEGTLIN, JOHNSON, and DYER), i, 99.

vegetable. See Plant tissues.

determination of chlorine in (URBACH and FANTL), i, 1203.

determination of cholesterol and its esters in (GARDNER and FOX), i, 182.

determination of copper in (CURRIE), i, 183.

determination of iron in (YABUSOE), i, 724.

**Titanium**, preparation of (VAN ARKEL and DE BOER), ii, 1193.

arc spectrum of (BEHNER), ii, 1100.

vacuum-arc spectrum of (CREW), ii, 385.

crystal structure of (PATTERSON), ii, 845.

**Titanium alloys with carbon and iron (TAMARU)**, ii, 787.

**Titanium carbide and nitride (FRIEDERICH)**, ii, 874.

dioxide (*titania*), catalytic action of and adsorption of gases by (BISCHOFF and ADKINS), ii, 568.

jellies of (KLOSKY and MARZANO), ii, 1057.

**Titanous chloride**, reduction of nitric acid by (COBLENS and BERNSTEIN), ii, 804.

standardisation of solutions of (ZINTL and RAUCH), ii, 1003.

use of, in electrovolumetric analysis (TOMIČEK), ii, 243.

**Titanic chloride**, reduction of (SCHMIDT), ii, 315.

*Toluene compounds Me = 1.*

**Titanium:—**

Titanic chloride, compound of acetic acid with (FICHTER and REICHART), ii, 194.

**Titanic organic compounds** (GIUA and MONATH), i, 581.

**Titanium ores**, fusion of (SEARS and QUILL), ii, 580.

**Tobacco**, dried, fermentation of (FODOR and REIFENBERG), i, 1519.

*o*-Tolidine, preparation of solutions of (ROAKE), ii, 432.

*p*-Tolualdehyde, condensation of, with menthone (SAMDAHL), i, 414.

*o*- and *p*-Tolualdehydes *p*-nitrophenylhydrazines (STEPHEN), i, 1131.

**Toluamides**, hydroxy-, acetyl, and benzoyl derivatives (ANSCHÜTZ, ASCHENBERG, KUCKERTZ, KRONE, RIEPENKRÖGER, and ZERBE), i, 666.

**Toluene**, sorption of the vapour of, by sugar charcoal (BAKER and MCBAIN), ii, 193.

catalytic chlorination of (O. and C. A. SILBERRAD and PARKER), i, 1137.

chlorination of, with selenium (O. and C. A. SILBERRAD), ii, 1191.

mercuration of (COFLEY), i, 844.

oxidation of (KNOOP and GIERKE), i, 1131.

electrochemical oxidation of (MANN and PAULSON), i, 556.

action of benzoyl peroxide on (GELISEN and HERMANS), i, 545.

**Toluene**, 3:5-diamino-2:4-dihydroxy-, and its tetra-acetyl derivate (HENRICH and GÖTZ), i, 913.

*p*-chloro-, photochemical action of iodine on (SILBERRAD), i, 16.

nitration of (HODGSON), i, 1397.

*p*-chlorothioli- (LECHER, HOLSCHNEIDER, KÖBERLE, SPEER, and STÖCKLIN), i, 390.

*p*-nitro-, melting point of (PUSHIN), ii, 277.

*trinitro*-, heat of fusion of (RINKENBACH and HALL), ii, 207.

2:4:6-*trinitro*-, decomposition of, by sunlight (KRAUZ and TUREK), i, 646; (WICHERT and DONAT), i, 803.

halogenation of (GANGULY), i, 647.

**Toluenes**, iodo-, isomeric, polarity effects in (SHOESMITH and SLATER), i, 16.

electrolytic oxidation of (FICHTER and LÖTTER), i, 1055.

nitro-, action of light on (SCHULTZ and GANGULY), i, 647.

*o*- and *p*-nitro-, separation of (MOLINARI), i, 380.

*Toluene compounds, Me = 1.*

- Toluenes, *as-trinitro*-, reactions of (BRADY, HEWETSON, and KLEIN), i, 16.
- o*-Toluenesulphonic acid, and its derivatives, and 3-nitro- (BÜLOW and SPENGLER), i, 1102.
- p*-Toluenesulphonylformaldoxime (WALKER), i, 1193.
- p*-Toluenesulphonylformaldoxime, and its phenylcarbamate (WALKER), i, 1193.
- 4-*p*-Toluenesulphonyl-3:5-dimethylisoxazole, and 4-*m*-nitro- (BÜLOW and SPENGLER), i, 1102.
- 4-*p*-Toluenesulphonyl-3:5-dimethylpyrazole, and its salts, and 4-*m*-nitro- (BÜLOW and SPENGLER), i, 1102.
- Toluene-3-azo-oximinacetotoluidides (KARRER, DIEHMANN, and HAEBLER), i, 243.
- 4-*p*-Toluenesulphonyl-1-phenyl-3:5-dimethylpyrazole, and 4-*m*-nitro- (BÜLOW and SPENGLER), i, 1102.
- 1-*p*-Toluenesulphonyl-2-aminonaphthalene (CHARRIER, CRIPPA, TOIA, and BIANCHETTI), i, 591.
- p*-Toluenesulphenanilide (LECHER, HOLSCHNEIDER, KÖBERLE, SPEER, and STÖCKLIN), i, 390.
- p*-Toluenesulphonylbenzylamide (HOLMES and INGOLD), i, 1143.
- p*-Toluenesulphonylbenzylmethanamide, and its hydrochloride (HOLMES and INGOLD), i, 1143.
- o*-Toluenesulphonylbenzylaldehyde, and the corresponding acetates (V. AUWERS), i, 1461.
- o*-2-Toluenesulphonylbenzylmalonitrile (V. AUWERS), i, 1460.
- 1-*p*-Toluenesulphonylbenzylmalonitrile-8-sulphonic acid, and its sodium salt (FINZI), i, 654.
- Toluene-*o*-sulphonic acid, electrochemical oxidation of (FICHTER and STOCKER), i, 239.
- indazole ester (V. AUWERS), i, 1461.
- Toluene-*p*-sulphonic acid, esters, alkylation by (FINZI), i, 648.
- action of magnesium organic halides with (GILMAN and BEABER), i, 802.
- substituted phenyl and tolyl esters (SANÉ and JOSHI), i, 134.
- Toluenesulphonic acids, *d*-nitro-, sodium salts (BRADY, HEWETSON, and KLEIN), i, 16.
- d*-*o*-*p*-Toluenesulphonylpropionic acid, and its ethyl ester and amide (KENYON, PHILLIPS, and TURLEY), i, 507.
- p*-Toluenesulphonyl chloride, action of on nitrophenols (SANÉ and JOSHI), i, 134.

*Toluene compounds, Me = 1.*

- p*-Toluenesulphonylhydrazine, and its derivatives (FREUDENBERG and BLUMMEL), i, 52.
- o*-Toluenesulphonylindazoles (V. AUWERS), i, 1461.
- Toluene-*p*'-sulpho-*p*-phenetide, nitroderivatives, and their derivatives (REVERDIN), i, 1409.
- p*-Toluenethiolsulphonic acid, *o*-nitrophenyl ester (MILLER and SMILES), i, 392.
- m*-Toluic acid, 6-thiol- (KROLLFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1306; (ARNDT), i, 1311.
- p*-Toluic acid, 2-amino- and 2-nitro-, diethylaminoethyl esters, and their hydrochlorides (SODERMAN and JOHNSON), i, 814.
- o*-trichloro-, synthesis of (BÖSEKEN and GELISSEN), i, 30.
- Toluic acids, hydroxylamine salts (OESPER and BALLARD), i, 1233.
- Toluic acids, amino-, separation of (MAYER and SCHULZE), i, 1315.
- o*-Toluidine, 3:5-dibromo-, additive compounds of, with metallic salts (HANN and SPENCER), i, 653.
- 5-iodo-, preparation of, and its salts and derivatives (HANN and BERLINER), i, 908.
- m*-Toluidine, bromo-4:6-dihydroxy-, hydrobromide, and its derivatives (HENRICH and GÖTZ), i, 913.
- p*-Toluidine, surface tension of aqueous solutions of (EDWARDS), ii, 387.
- Toluidines hydroferriocyanides of (CUMMING), i, 122.
- detection of, colorimetrically (MURRAY), ii, 163.
- o*-*o*- and *p*-Toluidineacetophenones, hydrazones of (BUSCH, FRIEDENBERGER, and TRISCHBEIN), i, 41.
- p*-Toluidine-*p*-anisidine-1:4-naphthaquinone (FRIES and BILLIG), i, 940.
- β*-Toluidinebenzylmalonic acids, esters of (WAYNE and COHEN), i, 550.
- 3-Toluidine-5-ketoxoxazoles (WORRALL), i, 303.
- 3-Toluidine-5-ketopyrazoles (WORRALL), i, 303.
- 1-Toluidinomethylbenzothiazoles, and their derivatives (HUNTER), i, 1336.
- 2-*p*-Toluidine-1:4-naphthaquinone, 3-chloro-2-*N*-nitroso- (FRIES and BILLIG), i, 939.
- 1-*p*-Toluidine-3-naphthol-4-sulphonic acid (LANTZ and WAHL), i, 910.
- Toluidine-oximinopinacolins (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132.

*Toluene compounds, Me = 1.*

- Toluidino-5-phenyl-1:3:4-thiodiazines, and their hydrobromides and derivatives (BOSE), i, 1465.
- m*-Toluidino-*m*-toluthiazole, and its derivatives (LEVI), i, 445.
- 5-Toluidino-4-*o*-tolyl-1:2:4-triazole, 3-thiol, derivatives of (FROMM and SZENDRŐ), i, 985.
- p*-Toluidino-3:4:5-trimethoxyphenylcarbinol, and its hydrochloride (SONN and MEYER), i, 932.
- p*-Toluiminoisothio-*p*-toluamide, and its hydrochloride (ISHIKAWA), i, 1149.
- p*-Toluoyl chloride, 2-nitro- (SODERMAN and JOHNSON), i, 814.
- Toluoylacetamides, hydroxy- (ANSCHUTZ, ASCHENBERG, KUCKERTZ, KRONE, RIEPENKRÖGER, and ZERBE), i, 667.
- o*-Toluoylbenzoic acid, methyl ester (WEISS and KOREZYN), i, 560.
- o*-Toluoylbenzoic acids (BRAND, LUDWIG, and BERLIN), i, 904.
- m*-Toluoylbenzoic acid, *o*-4-bromo- (HELLER and MÜLLER-BARDORFF), i, 546.
- m*-Toluoyl-3:4:5:6-tetrachloro-2-benzoic acid, 2'-hydroxy- (ORNDORFF and PATEL), i, 672.
- 8-Toluoyl- $\alpha$ -naphthoic acid (MASON), i, 33.
- $\beta$ -Toluoxyloxypropionic acids, and their amides (POWELL and JOHNSON), i, 278.
- $\gamma$ -*m*- and *p*-Toluoxyloxypropyl alcohols (POWELL and JOHNSON), i, 278.
- 2-*o*-Toluoylphenyldi-*o*-tolylcarbinol (WEISS and KOREZYN), i, 560.
- Tolquinone, action of azides with (CHATTAWAY and PARKES), i, 985.
- Tolyleneamidine-2-phenyl-*o*-carboxylic acid. See 4-Methylbenziminazole-2-benzoic acid.
- m*-Tolyl hydroxyethyl ether (CASSELLA & Co.), i, 897.
- p*-Tolyl *p*-acetoxymethyl ether (PUMMERER, PUTTFARCKEN, and SCHOPFLOCHER), i, 1263.
- isoamyl sulphide (GILMAN, BEABER, and MYERS), i, 1057.
- benzyl ether (v. BRAUN and REICH), i, 1405.
- $\beta$ -chloroethyl sulphide (LECHER, HOLSCHNEIDER, KÖBERLE, SPEER, and STÖCKLIN), i, 890.
- cinnamyl ether (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656.
- methyl ether, 2-amino-, and 5-bromo-2-amino-, 2-acetyl derivatives (GRIFFITH and HOPE), i, 827.
- o*- and *p*-Tolyl acetates, action of sodium on (HALL), i, 23.
- p*-Tolylacetaldehyde *p*-nitrophenylhydrazone (STEPHEN), i, 1131.

*Toluene compounds, Me = 1.*

- o*-Tolylacetic acid,  $\omega$ -amino- and its derivatives (v. BRAUN and REICH), i, 1407.
- p*-Tolylisoamylsulphone (GILMAN, BEABER, and MYERS), i, 1057.
- o*-Tolyl anisyl ketone (DE DIESBACH and STREBEL), i, 1435.
- o*-Tolylarsinic acid (BURTON and GIBSON), i, 84.
- Tolyl-5-arsinic acids, diamino-, and nitroamino-, benzoyl derivatives (HAMILTON and MAJOR), i, 990.
- N*-*p*-Tolylbenzimid-*p*-tolyl ether (CHAPMAN), i, 1401.
- o*-Tolylbenzylketimine, and its hydrochloride (JASPERS), i, 936.
- p*-Tolylborneol (LEDUC), i, 821.
- p*-Tolylcamphene (LEDUC), i, 821.
- o*- and *p*-Tolylcarbamic acids, dinitro-, esters of (KNIPHORST), i, 906.
- o*-Tolylcarbamide, 5-iodo-, and its hydrochloride (HANN and BERLINER), i, 908.
- m*-Tolylcarbamide, 2:4- and 4:6-dinitro- (GIUA and PETRONIO), i, 1397.
- o*- and *p*-Tolylcarbamides, dinitro- (KNIPHORST), i, 906.
- o*-Tolylcarbylamine, 5-iodo- (HANN and BERLINER), i, 908.
- p*-Tolylcitronellylamine, and its derivatives (RUPE and RINDERKNECHT), i, 658.
- m*-Tolyleyanamide, 4:6-dinitro- (GIUA and PETRONIO), i, 1397.

chloride and peroxide, *tri-p*-hydroxyacetyl and benzoyl derivatives (GOMBERG and SNOW), i, 661.
- Triphenylmethylaminocetic acid**, and its salts and ethyl ester (HELFERICH, MOOG, and JÜNGER), i, 791.
- dl*- $\alpha$ -Triphenylmethylaminopropionic acid**, and its sodium salt and ethyl ester (HELFERICH, MOOG, and JÜNGER), i, 792.
- Triphenylmethyldibenzoyldextrose isopropylidene ether** (HELFERICH, MOOG, and JÜNGER), i, 791.
- $\alpha$ -Triphenylmethylethylene glycol**, and its *di-p*-nitrobenzoate (LEWIS, NIERENSTEIN, and RICH), i, 936.
- Triphenylmethyl-*d*-galactose** (HELFERICH, MOOG, and JÜNGER), i, 790.
- Triphenylmethyl-*d*-gluconic acid**, potassium salt (HELFERICH, MOOG, and JÜNGER), i, 791.
- Triphenylmethyl-*d*-gluconphenylhydrazide** (HELFERICH, MOOG, and JÜNGER), i, 791.
- Triphenylmethyl-*d*-glucoses**, and their tetra-acetates (HELFERICH, MOOG, and JÜNGER), i, 790.
- Triphenylmethyl- $\alpha$ - and - $\beta$ -methyl-*d*-glucosides**, and their derivatives (HELFERICH and BECKER), i, 10.
- Triphenylmethylthiocarbamide** (HELFERICH, MOOG, and JÜNGER), i, 791.
- 2:4:5-Triphenyloxazole**, and amino-, and hydroxy-, and their derivatives (TRÖGER and PHILIPPSON), i, 986.
- $\alpha\alpha\epsilon$ -Triphenyl- $\Delta^{58}$ -pentadiene  $\gamma$ -chloro-** (STRAUS and EHRENSTEIN), i, 535.
- Triphenylphosphine oxide**, *tri*-, *m*-, and *p*-chloro- (CHALLENGER and WILKINSON), i, 172.
- $\alpha\alpha\gamma$ -Triphenylpropane** (ZIEGLER, GRABBE, and ULRICH), i, 132.
- $\alpha\alpha\gamma$ -Triphenylpropane**,  $\alpha\beta$ -*di*bromo- (ZIEGLER, RICHTER, and SCHNELL), i, 915.
- $\alpha\alpha\gamma$ -Triphenylpropan- $\alpha$ -ol**,  $\beta$ -amino-, hydrochloride (THOMAS and BETTZIEGHE), i, 250.
- Triphenylpropargyl alcohol**, and its ethers (MOURRU, DUFRAISSE and BLATT), i, 136.  
thermochemistry of, and its derivatives (LANDRIEU and BLATT), i, 137.
- $\alpha\alpha\gamma$ -Triphenyl- $\Delta\alpha$ -propene** (ZIEGLER, GRABBE, and ULRICH), i, 132.
- $\alpha\gamma\gamma$ -Triphenylpropenyl methyl ether** (STRAUS and EHRENSTEIN), i, 534.
- $\alpha\alpha\beta$ -Triphenylpropyl alcohol**,  $\beta$ -amino- (MCKENZIE and WILLS), i, 396.
- $\alpha\alpha\gamma$ -Triphenylpropyl alcohol** (ZIEGLER, GRABBE, and ULRICH), i, 132.
- $\beta\beta\gamma$ -Triphenylpropyl alcohol** (RAMART and AMAGAT), i, 659.
- $\alpha\alpha\gamma$ -Triphenylpropyl methyl ether** (STRAUS and EHRENSTEIN), i, 535.
- $\alpha\alpha\gamma$ -Triphenylpropyl methyl ether  $\beta$ -bromo-** (ZIEGLER, RICHTER, and SCHNELL), i, 915.

- ααγ*-Triphenyl- $\Delta\beta$ -propylene,  $\gamma$ -chloro- (STRAUS and EHRENSTEIN), i, 534.
- ααβ*-Triphenylpropylene  $\alpha\beta$ -glycol (ROGER), i, 660.
- Triphenylpyrylium compounds, *m*-substituted (DILTHEY and RADMACHER), i, 1441.
- Triphenyros-*o*-toluidine. See 3:3':3''-Trimethyl-*N:N':N''*-triphenylparosaniline.
- Triphenyltetrazolium *d*-camphorsulphonates (WEDEKIND), i, 678.
- Tripyrocatechylarsinic acids, optically active, and their salts (ROSENHEIM and PLATO), i, 1412.
- Tripyrocatechylantimonic acid, formula of (REIHLEN, SAPPER, and KALL), i, 912.
- Triptyrylmethanes (FISCHER and HEYSE), i, 76.
- Triterpene from *L*-pinene (KONDAKOV and SAPRIKIN), i, 1293.
- Trithiocarbonic acid, *di-p*-tolyl ester (AUTENRIETH and HEFNER), i, 1376.
- Tri-*p*-tolyl thiophosphate (AUTENRIETH and MEYER), i, 807.
- Tri-*p*-tolylbismuthine, *tri-2*-nitro-, and its derivatives (SUPNIEWSKI), i, 1473.
- Tri-*m*-tolylcarbinol, 4:4':4''-trihydroxy-, triacetyl derivative (GOMBERG and ANDERSON), i, 1065.
- Triton tenuatus*, skin secretion of (MAKI), i, 327.
- Tritopine, constitution of (SPÄTH and SEKA), i, 1093.
- Trivinylarsine,  $\beta\beta\beta$ -trichloro-, silver nitrate compound of (LEWIS and STIEGLER), i, 1470.
- Trivinylmethylarsonium salts,  $\beta\beta\beta$ -trichloro- (LEWIS and STIEGLER), i, 1470.
- Trixanthylhydrazine (FOSSE and HIEULLE), i, 1130.
- Troostite (WHEATLEY), ii, 488.
- L*-Tropamide (MCKENZIE and STRATHERN), i, 401.
- Trope acid,  $\beta$ -dimethylaminoethyl and  $\beta$ -piperidinoethyl esters (CHEMISCHE WERKE GRENZACH), i, 31.
- Tropic acid group, displacement reactions in (MCKENZIE and STRATHERN), i, 401.
- Tropine *N*-oxide, and its derivatives (POLONOVSKI and POLONOVSKI), i, 829.
- Trouton's rule, at absolute zero (PERRAKIS), ii, 492.  
revised (BYK), ii, 97.  
for associated liquids (WAGNER), ii, 762.
- Truxenquinone (RADULESCU and GEORGESCU), i, 1286.
- $\zeta$ -Truxinamic acids, and their methyl esters (STOERMER and KLOCKMANN), i, 928.
- $\zeta$ -Truxinanilic acids, methyl esters and nitroso derivative (STOERMER and KLOCKMANN), i, 927.
- $\zeta$ -Truxinic acid, and its derivatives (STOERMER and KLOCKMANN), i, 927.
- Truxones, constitution and synthesis of (DE FAZI), i, 269.
- Trypflavine, sensitivity to light of (JOHN), i, 465.
- Trypanocidal action and chemical constitution (KING and MURCH), i, 319.
- Trypanocidal compounds (ADAMS and JOHNSON), i, 319.
- Trypsin, activity of (EHRENBERG), i, 103.  
effect of reagents on the activity of (HUGOUNENQ and LOISELEUR), i, 1198.  
inactivation of, by Röntgen rays (CLARK and NORTHPROP), i, 1361.  
digestion with low concentrations of (EHRENBERG), i, 202.  
production of ammonia in digestion by (HUNTER and SMITH), i, 473.  
action of, on insulin (SCOTT), i, 870.  
effect of lecithin and cholesterol on digestion by (STANDENATH), i, 473.  
synthesis of proteins by (WASTENEYS and BORSOOK), i, 865.  
pancreatic (WALDSCHMIDT-LEITZ and HARTENECK), i, 1360.  
determination of (WILLSTÄTTER and PERSIEL), i, 741.  
determination of, colorimetrically (SMORODINCEV and ADOVA), i, 473.
- Tryptophan from silk fibroin (HIRATSUKA), i, 836.  
content of, in proteins (JONES, GERSDORFF, and MOELLER), i, 98.  
metabolism of. See Metabolism.  
colour reactions of aldehydes with (BLANCHETIÈRE), i, 963; (KOMM), ii, 164.  
detection of, by means of *Bacillus coli* (MME. E. and E. WOLLMAN), i, 205.  
determination of, colorimetrically, and its separation from indole and skatole (KRAUS), ii, 448.
- Tuberculin (MUELLER), i, 616.
- Tuberculosis, lipase in (CAPPELLI), i, 725.  
basic constituents of urine in (REINWEIN), i, 189.
- Tumours, carbohydrate metabolism of (C. F. and G. T. CORI), i, 999, 1492.  
formation of lactic acid in (WARBURG), i, 1492.

**Tumours**, urea in blood after inoculation with, and exposure to *X*-rays (DODDS, LAWSON, and MOTTRAM), i, 1492.

**Tungsten**, physical properties of (ZWICKER), ii, 1041.

line spectrum of (WORTHING and RUDY), ii, 1102.

Röntgen ray absorption and emission spectra of (ZUMSTEIN) ii, 725.

*K*-series spectrum of (ALLISON and DUANE), ii, 250.

*M*-series spectrum of (THORAEUS), ii, 5.

spark spectrum of (BAYEN), ii, 168 ; (L. and E. BLOCH), ii, 168, 727 ; (LEMON), ii, 454.

*X*-ray absorption coefficient of (WARBURTON and RICHTMYER), ii, 1103.

electron emission from (DUSHMAN, ROWE, EWALD, and KIDNER), ii, 345.

emission of electrons from films on (KINGDON), ii, 9.

secondary electrons from (STUHLMAN), ii, 1104.

pure, electrical properties of (GEISS and VAN LIEMPT), ii, 638.

electrical properties of, after cold working (GEISS and VAN LIEMPT), ii, 372.

electro-deposition of (VAN LIEMPT), ii, 694.

incandescent, specific heat of (BOCKSTÄHLER), ii, 643.

diffusion of carbon through (ANDREWS and DUSHMAN), ii, 500.

effect of cold working on density of (GEISS and VAN LIEMPT), ii, 762.

movement of a crystal of, under loads (GEISS), ii, 96.

macro-crystal formation in (ALTERTHUM), ii, 136.

equilibria of, with oxygen and with water vapour (ALTERTHUM and KOREF), ii, 1159.

**Tungsten halides**, action of, with ammonia and with potassamide in liquid ammonia (BERGSTROM), ii, 1033.

trioxide, equilibria of, with alkali tungstates (VAN LIEMPT), ii, 421.

selenide (MOSER and ATYNSKI), ii, 583.

**Tungstic acid**, electrolytic reduction of, in hydrochloric acid (COLLENBERG and BACKER), ii, 571.

electrolytic reduction of, in presence of oxalic acid (COLLENBERG and WILSON), ii, 1166.

alkyl and aryl ammonium salts (KRAUSE and KRAUSKOPF), i, 903.

**Tungsten** :—

**Tungstic acid**, complex compounds of, with pyrocatechol and pyrogallol (FERNANDES), i, 912, 1061.

**Tungstates**, reduction of (SPITZIN), ii, 1191.

**Tungsten determination and separation** :—

determination of, by means of bismuth and lead amalgams (SOMEYA), ii, 904.

determination of boron in (BROPHY), ii, 901.

determination of carbon in (KING), ii, 435.

separation of, from tin (JILEK and LUKAS), ii, 242.

**Tungsten arc**, measurements of (DE GROOT), ii, 1137.

**Tungsten filaments**, hafnium oxide in (VAN LIEMPT), ii, 233.

**Tungsten wire**, electrical explosion of (BRISCOE, ROBINSON, and STEPHENSON), ii, 343.

hard-drawn, softening of (KOREF), ii, 846.

**Tunicin**, Röntgen spectra of cellulose and (HERZOG and GONELL), i, 371.

**Turbidimeter**, micro- (CONKLIN), ii, 708.

**Turgoelectricity** (KOPACZEWSKI), ii, 978.

**Turmeric paper**, double-reacting (BRINSMAID), ii, 435.

**Turpentine**, oxidation of organic compounds in (WALKER), i, 990.

spruce, *l*-borneol from (WHEELER and HARRIS), i, 1437.

**Tutocaine**, experiments with (WAGNER), i, 1503.

**Tyramine**, preparation of (JOHNSON and DASCHAVSKY), i, 540.

influence of, on nitrogen metabolism (IWATSURU), i, 1502.

detection of, microchemically (VAN ITALLIE and STEENHAUWEN), ii, 608.

**Tyrosinase** in plants (BOAS and MERKENSCHLAGER), i, 474.

oxidative deamination by (ROBINSON and McCANCE), i, 745.

deamination of tyrosine by (RAPER and WORMALL), i, 473 ; (HAPPOLD and RAPER ; GORTNER), i, 474.

**Tyrosine**, deamination of, by tyrosinase (RAPER and WORMALL), i, 473 ; (HAPPOLD and RAPER ; GORTNER), i, 474.

methylation of (ABDERHALDEN and SCHWAB), i, 1423.

determination of, in proteins (FÜRTH and FISCHER), ii, 448.

**Tyrosine**, bromo-, bromonitro-, chloro-, chlorobromo-, and chloronitro-, and their derivatives (ZEYNEK), i, 920.

**Tyrosylalaninecarboxylic acid** (HAVESTADT and FRICKE), i, 163.

**Tyrosylaspartic acid** (HAVESTADT and FRICKE), i, 163.

**Tyrosylhistidinecarboxylic acid** (HAVESTADT and FRICKE), i, 163.

**Tyuyamunite** (TSCHIRVINSKI), ii, 430.

## U.

**Ulmans, coal** (FRANCIS and WHEELER), i, 1389.

**Ultrabalance** (HOLTZ and KUHLMANN), ii, 319; (KUHLMANN), ii, 706; (HOLTZ), ii, 1091.

**Ultracentrifuge** (SVEDBERG and RINDE), ii, 233.

**Ultrafilters** (MÜLLER), ii, 1061.

**Ultrafiltration, mechanism of** (DUCLAUX and ERRERA), ii, 530.  
under pressure (BRUCKNER and OVERBECK), ii, 529.

of non-aqueous solutions (BECHHOLD and SZIDON), ii, 529.

electro- (BECHHOLD), ii, 1158.

**Ultramarine, structure of** (DOMINKIEWICZ), ii, 1131.

**Ultramicroons** (SIEDENTOPF), ii, 637.

**Ultramicroscope, kino-** (KRAEMER), ii, 1156.

***Umbilicus pendulinus***, maltose in tubers of (BRIDEL), i, 620.

***n*-Undecane- $\alpha$ - $\omega$ -diol** (HELPERICH and SCHÄFER), i, 7.

***n*-Undecan- $\zeta$ -ol** (HESS and BAPPERT), i, 849.

**Undecaoxymethylene diacetate** (STAUDINGER and LÜTHY), i, 361.

**Unsaturated compounds, formation of**, from halogenated open-chain derivatives (INGOLD), i, 357; (HAERDI and THORPE), i, 928.

polar and non-polar valencies in (SUGDEN, REED, and WILKINS), ii, 936.

catalytic hydrogenation of (LEBEDEV, KUBLIANSKY, and YAKUBCHIK), i, 350.

addition of iodine bromide and hypiodous acid to (HOLDE and GORGAS), i, 882.

oxidation of, with permanganate (NAMEDKIN), i, 1146.

action of silicates on (LEBEDEV and FILONENKO), i, 225.

action of thiocyanogen on (SÖDERBÄCK), i, 899; (CHALLENGER and BOTT), i, 936.

cyclic, theory of (PETRENKO-KRITSCHENKO), ii, 1122.

**Unsaturation of organic ring systems** (MERZKOVSKI), i, 1291.

**Unstable substances, attempts to isolate** (STAUDINGER and KREIS), ii, 316.

**Uracyl xylosides, substituted** (LEVENE and SOBOTKA), i, 1463.

**Uracylic acid, brucine salt** (PEISER), i, 1477.

**Uraemia, diazo reactions of serum in** (HEWITT), i, 726.

***Uragoga ippecacuanha***, alkaloids of (KELLER and BERNHARD), i, 1086.

**Uranic hydroxide**. See under Uranium.

**Uranic acid**. See under Uranium.

**Uranium, isotopes of** (HAHN), ii, 921.

change of, into uranium- $X$  (GASCHLER), ii, 925.

**Uranium compounds, isomorphism of** zirconium and (FERNANDES), ii, 1133.

isomorphism of, with those of metals of the magnesium group (CAROBBI), ii, 892.

reactions of, with organic compounds in presence of sunlight (ALÖY and VALDIGUÉ), ii, 1081.

**Uranium sulphates** (MEYER and NACHOD), ii, 230.

**Uranic hydroxide, precipitation of**, electrometrically (BRITTON), ii, 1204.

**Uranic acid, complex compounds of**, with pyrocatechol and pyrogallol (FERNANDES), i, 912, 1061.

**Uranyl salts, reduction of**, with the dropping mercury cathode (HERASIMENKO), ii, 695.

**Uranyl barium and silver carbonates** (HEDVALL), ii, 990.

**Uranylsulphites of the rare earths** (CANNERY and FERNANDES), ii, 888.

**Uranium determination and separation**:-

determination of, oxidimetrically (KOBLO), ii, 831.

determination of, in carnotite (BRINTON and ELLESTAD), ii, 72.

separation of, from rare earths (CANNERY and FERNANDES), ii, 71.

**Uranylsalicylic acid, alkali salts** (CANNERY and FERNANDES), ii, 71.

**Urazole, dithio-**, structure of (GUHA and RAY), i, 702.

**Urea (carbamide)**, formation of, in autolysis of liver and spleen (MCANCE), i, 472.

metabolism of. See Metabolism.

as a source of nitrogen in ruminants (LAVROV, MOLTSCHANOVA, and OCHOTNIKOVA), i, 464.

influence of, of adrenaline on concentration of, in blood (DUBOIS and POLO-NOVSKI), i, 481.

- Urea** (*carbamide*), in fungi (IVANOV), i, 344, 746.  
 effect of, and its derivatives, on higher plants (E. and G. NICOLAS), i, 757.  
 in soils (COUTURIER and PERRAUD), i, 765.  
 decomposition of, in soils (LITTAUER), i, 218.  
 replacement of proteins by, in diet of milch animals (MORGEN, WINDHEUSER, and OHLMER), i, 217.  
 new form of, in urine (MOOR), i, 460.  
 determination of (HUNTER and DAUPHINEE), ii, 247.  
 apparatus for determination of (HORVATH), ii, 237.  
 determination of, colorimetrically (HUNTER and DAUPHINEE), i, 104.  
 determination of, in blood (KARR), i, 323; (PATTERSON), i, 1200.  
 determination of, in blood and urine (MURRAY), i, 710.  
 determination of, in physiological fluids (REHBERG; ROIG and HELMHOLTZ), i, 853.  
 determination of, in urine (KIKUCHI; GOLSE), i, 609.  
 See also Carbamide.
- Urease**, effect of alcohol on (ROSENFELD), i, 336.  
 gastric (KORTSCHAGIN), i, 200.  
 physiology of (LUCK and SETH), i, 1010.  
 soja bean, hydrolysis by (TAUBMANN), i, 744.
- Urethane**, density and compressibility of solutions of (RICHARDS and CHADWELL), ii, 1049.
- Urethane**, hydroxy-, alkyl derivatives of (NEUFFER and HOFFMAN), i, 391.
- Urethanes**, hydroxy- (OESPRR and BROKER), i, 1407.
- Urginea Burkei* (African squill), active principles of (GEORGE), i, 323.
- Uric acid**, first synthesis of (BEHREND), i, 441.  
 supersaturated solutions of (STERN), ii, 196, 504, 1152.  
 solvent action of trimethylenetriamines on, and its trimethyl- and triethyl-trimethylenetriamine salts (GRAYMORE), i, 76.  
 catalytic oxidation of, and its copper salts (PIAUX), i, 592.  
 oxidation of, with iodine (FÜRTH), i, 1462.  
 decomposition of, by bacteria and moulds (MORRIS and ECKER), i, 478.  
 excretion of, in bile and urine (BAUGSCH and ROTHER), i, 860.
- Uric acid**, in blood (HARDING, ALLIN, and VAN WYCK), i, 94; (LENNOX and O'CONNOR), i, 711.  
 effect of fat diet on (HARDING, ALLIN, EAGLES, and VAN WYCK), i, 604.  
 in cerebrospinal fluid (BERNHARD), i, 326.  
 accumulation of, after liver removal (BOLLMANN, MANN, and MAGATH), i, 1496.  
 excretion of, in urine (RANGIER), i, 186; (CHELLE and RANGIER), i, 187.  
 sodium salt, transformation of, on keeping (STERN), ii, 34.  
 determination of, by Benedict's method (COHEN), i, 184.  
 determination of, in blood (BULMER, EAGLES, and HUNTER; GARRY), i, 605; (BENEDICT), i, 995; (DELAVILLE and JONES), i, 1344.  
 determination of, in blood plasma (DELAVILLE and JONES), i, 1201.  
 determination of, in urine (AUFRECHT), i, 187.
- Uric acids**, methylated, synthesis of (PRÜSSE), i, 441.  
 substituted, action of alkalis on (GATEWOOD), i, 1188, 1189.
- Uric acid glycols**, oxidation of (SLOTTA), i, 1189.
- Uricolytic index** in diabetes (LANGFELDT and HOLMSEN), i, 1207.
- Urindigo**. See Diuracil-4:4'-indigotin.
- Urine**, effect of muscular exercise on composition of (LILJESTRAND and WILSON; WILSON, LONG, THOMPSON, and THURLOW), i, 1115.  
 effect of neutral salts on the acidity of (GYÖRGY), i, 459.  
 effect of calcium and potassium salts on acidity of (BENATT and HÄNDEL), i, 722.  
 secretion of (STARLING and VERNY), i, 458.  
 effect of pituitary extracts on (SMITH and McCLOSKEY), i, 207.  
 acetone substances in (HUBBARD and NOBACK), i, 712.  
 acetone and  $\beta$ -hydroxybutyric acid in (LUBLIN), i, 459.  
 arsenic in (Oox), ii, 157.  
 basic constituents of, in tuberculosis (REINWEIN), i, 189.  
 calculi in (RANDALL), i, 1491.  
 capillary active substance of (KIESSEL), i, 98.  
 excretion of carbon and nitrogen in (SCHIMIZU), i, 185.  
 excretion and detection of chlorophyll degradation products in (HOFSTETTER; KITAHARA), i, 460.

**Urine, cholesterol in** (GARDNER and GAINSBOROUGH), i, 1204.  
**red colouring matter in, after administration of chlorophyll** (GODINHO), i, 460.  
**red pigment from *p*-dimethylaminobenzaldehyde and (SCHEFF)**, i, 855.  
**dextrose in** (LUND and WOLF), i, 1205.  
**diastase in, in pancreatic diseases** (HANSEN), i, 856.  
**nitrogen distribution in hydroxyproteic acids of** (BRINGS), i, 328; (FREUND and SITTENBERGER-KRAFT), i, 723; (EDLBAEHR), i, 855.  
**excretion of iminazole in, after disappearance of carnosine** (HUNTER), i, 459.  
**nitrogen and chloride excretion in** (TAKANOSU), i, 185.  
**organic bases in** (HEFTER), i, 1850.  
**oxalate from** (MOOR), i, 1490.  
**organic phosphorus of** (YOUNGBURG and PUCHER), i, 98.  
**propepsin in** (GOTTLIEB), i, 742.  
**salicylic acid in** (DRZIMAL), i, 99.  
**sugars in** (GREENWALD, GROSS, and SAMET), i, 185.  
**urochrome and new form of urea in** (MOOR), i, 460.  
**excretion of uric acid in** (RANGIER), i, 186; (CHELLE and RANGIER), i, 186.  
**volatile substance of** (PITTARELLI), i, 98.  
**of various animals, comparative biochemistry of** (ROTHWELL), i, 1350.  
**camel's, constituents of** (READ), i, 1204.  
**dog's, excretion of purine derivatives in** (LANGFELDT and HOLMSEN), i, 1205.  
**of ruminants, distribution of nitrogen in, and its alkalinity after administration of sodium nitrate** (ROGOZINSKI and STARZEVSKA; STARZEVSKA), i, 1355.  
**whale's** (MORIMURA), i, 1848.  
**Urine, analytical methods relating to:—**  
**analysis of** (RAQUET and PAGET), i, 1850.  
**diazo reaction in** (HUNTER), i, 459.  
**clinical detection of dextrose in** (RUOSS), i, 185.  
**detection of hæmatoporphyrin and urobilin in** (POLICARD and LEULIER), i, 1351.  
**detection and determination of indican in** (GORE), i, 186.  
**detection of nitroaminophenols in** (DESVERGNES), i, 328.

**Urine, analytical methods relating to:—**  
**detection of urobilin in** (RODILLON), i, 722.  
**detection of urobilin and urobilinogen in** (BENGUEREL), i, 460.  
**detection and determination of acetone in** (ENGFELDT), i, 1490.  
**determination of, in urine and fæces** (VAN SPENGLER; TERWEN), i, 1351.  
**determination of acetoacetic acid and  $\beta$ -hydroxybutyric acid in** (GOLDBLATT), i, 1204.  
**determination of acetone in, colorimetrically** (SITSEN), i, 855.  
**determination of ammonia in** (YOVANOVITCH), i, 1114.  
**determination of ammonia in, colorimetrically** (ORR), i, 184.  
**determination of ammonia and ammonium salts in** (YOVANOVITCH), i, 1204.  
**determination of ammonia and urea in** (MURRAY), i, 710.  
**determination of bismuth in** (KÜRTHY and MÜLLER), i, 100.  
**determination of cystine in** (MAGNUS-LEVY), i, 610.  
**determination of formic acid in** (DE EDS), i, 713.  
**determination of guanidines in** (SHARPE), i, 722.  
**hydrogen-ion determination in** (HASTINGS, SENDROY, and ROBSON), i, 1490.  
**determination of iodides in** (v. BODÓ), i, 1490.  
**determination of organic acids in** (GOIFFON), i, 459.  
**determination of phenolsulphonephthalein in, in jaundice** (ABRAMSON), i, 329.  
**determination of potassium and sodium in** (v. DEHN), i, 855.  
**determination of reducing sugars in** (WOKES), i, 1205.  
**diabetic, determination of sugar in** (SUMNER), i, 186, 1491; (WILLIAMS and CASEY), i, 998.  
**determination of sugar, after santonin treatment** (PÉGURIER), i, 609.  
**determination of urea in** (KIKUCHI; GOLSE), i, 609; (ROIG and HELMHOLTZ), i, 853; (ADDIS), i, 1113.  
**determination of uric acid in** (AUFRECHT), i, 187.  
**determination of urobilin in** (VAN SPENGLER; TERWEN), i, 1351.  
**determination of urobilinogen in** (TERWEN), i, 1351.

- Urobilin**, detection of (ADLER), i, 328.  
 detection of, in urine (BENGUEREL), i, 460.  
 detection of, in faeces (ADLERSBERG and PORGES), i, 98.  
 detection of, in urine (RODILLON), i, 720; (POLICARD and LEULIER), i, 1351.  
 determination of, in human excreta (OPITZ and BREHME), i, 187.  
**Urobilinogen**, detection of, in urine (BENGUEREL), i, 460.  
 determination of, in urine and faeces (TERWEN), i, 1351.  
**Urocanic acid**, formation and fate of, in the animal body (KONISHI), i, 731.  
**Urochrome**, glyconic acid as a constituent of (POLLECOFF), i, 186.  
 in urine (MOOR), i, 460.  
**Urochromogen** (MOOR), i, 328.  
**Uroflavine** (REINWEIN), i, 725.  
**Ursolic acid** (VAN DER HAAR), i, 50.  
*Utricularia vulgaris*, enzymes of (ADOVA), i, 202.

## V.

- Vaccines**, bacterial, nitrogen content of (KAUTSKY, LEINWEBER, and FAMULENER), i, 1511.  
**Vacuum apparatus**, trap for mercury vapour in (HUGHES and POINDEXTER), ii, 818.  
**Vacuum door** (MEHL and SMITH), ii, 707.  
**Vacuum gauge**, laboratory (HAMLIN), ii, 431.  
**Valency** (SCHÖNBERG), i, 557; (LORING), ii, 841.  
 problems of (MÜLLER), ii, 363.  
 electron theory of (LOWRY), ii, 15; (ODDO), ii, 623.  
 in relation to heat of combustion (KHARASCH and SHER), ii, 636.  
 magnetic theory of (LAURIE), ii, 16.  
 higher, in relation to assimilation and catalysis (TSCHELINCEV), ii, 481.  
 polar and non-polar, theories of (BURKHARDT and LAPWORTH), ii, 937.  
 in unsaturated compounds (SUGDEN, REED, and WILKINS), ii, 936.  
**Valeraldehyde**,  $\gamma$ -hydroxy-, and its dimethylacetal, and their benzoyl derivatives (HELFERICH and FRIES), i, 1039.  
**Valerian root**, Indian, oleo-resin from (BULLOCK), i, 1294.  
*n*-Valeric acid, preparation of (GILMAN and PARKER), i, 228.  
*n*-Valeric acid, hydroxylamine salt (OESPER and BALLARD), i, 1233.  
 furfuryl ester (ZANETTI), i, 567.  
*iso*Valerylglycine, ethyl ester (KARRER, MIYAMICHI, STORM, and WIDMER), i, 594.  
*Valonia*, cell sap of, with reference to flotation (OSTERHOUT and DORCAS), i, 868.  
*Valonia macrophysa*, permeability of, by arsenic (BROOKS), i, 1004.  
**Valve**, fat-free, with porous glass plates (STOCK), ii, 1195.  
**Vanadic acid**. See under Vanadium.  
**Vanadisalicyclic acid** (SCAGLIARINI and AIROLDI), i, 920.  
**Vanadium**, ultra-violet spark spectrum of (KING), ii, 453.  
 ionised, spectrum of (MEGGERS), ii, 913.  
**Vanadium alloys** with iron, temper colours of (TAMMANN and SIEBEL), ii, 1169.  
**Vanadium carbide and nitride** (FRIEDERICH), ii, 375.  
 pentoxide sols (FREUNDLICH, STAPELFELDT, and ZOCHER), ii, 199, 200; (FREUNDLICH), ii, 1153.  
 alkali sulphates (ROSENHEIM and MONG), i, 1411.  
**Vanadic acid**, determination of (FURMAN), ii, 442.  
**Vanadium organic compounds** (SCAGLIARINI and AIROLDI), i, 920.  
 salts of organic acids (ROSENHEIM and MONG), i, 1411.  
 pyridine sulphate (SCAGLIARINI and AIROLDI), i, 920.  
**Vanadium determination and separation**:—  
 determination of (HARTMANN), ii, 604.  
 determination of, iodometrically (STOPPEL, SIDENER, and BRINTON), ii, 73.  
 determination of, in presence of iron (SOMEYA), ii, 161.  
 determination of, in presence of iron and chromium (KOLTHOFF and TOMICEK), ii, 72.  
 separation of, from molybdenum (STOPPEL, SIDENER, and BRINTON), ii, 718.  
**Vanillin**, solubility of (MANGE and EHLE), ii, 119.  
 ferrous salt (ZETZSCHE, SILBERMANN, and VIELI), i, 1411.  
 condensation of, with methyl ethyl ketone (ICHIKAWA), i, 1156.  
 determination of (RADCLIFFE and SHARPLES), ii, 1210.  
**Vanillin**, 5-chloro- (HANN), i, 1105.

- Vanillinoxime** *N*-phenyl ether (BAMBERGER), i, 142.
- Vanillylidene**nitromethane as an indicator (KAO, SRIKANTIA, and IYENGAR), i, 676.
- 5-Vanillylidene-2-thio-3-tolyl-4-keto-thiazolidines**, and 5-bromo-, 5-chloro-, 5-iodo-, and 5-nitro- (HANN), i, 1105.
- Vanillylsuccinic acid**, and its derivatives (BAKER and LAPWORTH), i, 670.
- Vaporisation**, kinetic theory of (BRADFORD), ii, 1142.
- Vapour pressure** (BERLINER and MAY), ii, 1045.  
application of kinetic theory to (BRADFORD), ii, 26.  
thermodynamic equation for (EUCKEN, KARWAT, and FRIED), ii, 98.  
and ionisation of gases (BECKER), ii, 342.  
of binary mixtures (BROWN), ii, 377.  
and miscibility of binary mixed liquids (HERZFELD), ii, 1143.  
of organic mixed liquids (LESLIE and CARR), ii, 1050.  
of metallic chlorides (MAIER), ii, 850.  
of monatomic substances (EGERTON), ii, 25.  
of molecular compounds of phenols (WEISSENBERGER and SCHUSTER), 766.  
of salts (LORENZ and HERZ), ii, 493.  
of salt solutions, measurement of (SIDGWICK and EWBANK), ii, 38.  
of solutions of non-volatile solvents (MALI), ii, 850.  
charts for organic vapours (DAVIS), i, 1083.
- Vasicine**, and its salts (SEN and GHOSE), i, 958.
- Vaterite** (GIBSON, WYCKOFF, and MREWIN), ii, 1183.
- Vegetables**, cobalt and nickel in (BERTRAND and MOKRAGNATZ), i, 873.  
effect of storage on the anti-scurvy value of (DELF), i, 434.  
green, action of ultra-violet light on (HESS and WEINSTOCK), i, 212.
- Velocity of absorption**, effect of gas velocity and temperature (HASLAM, HERSHEY, and KEEN), ii, 106.
- Velocity of chemical change**, effect of diffusion on (SANO), ii, 681.
- Velocity of coagulation of colloids** (JABECZYŃSKI), ii, 34, 35.
- Velocity of crystallisation** (JENKINS), ii, 559.
- Velocity of decomposition of esters** (KARLSSON), ii, 877.
- Velocity of diffusion**, relation of, to viscosity and pressure (COHEN and BRUINS), ii, 280.
- Velocity of diffusion of metals in mercury** (COHEN and BRUINS), ii, 648.
- Velocity of dissociation of solids** (CENTNERSZWER and BRUŽS), ii, 685.
- Velocity of esterification** (PETRENKO-KRITSCHENKO, BOGATSKY, and LUBMAN), ii, 556.
- Velocity of gas reactions**, apparatus for measuring (LATSHAW and PATRICK), ii, 681.
- Velocity of photochemical reaction** (PERRIN and CHOUVROUX), ii, 55.
- Velocity of reaction**, theory of (BRÖNSTED), ii, 681; (LEWIS and SMITH), ii, 799.  
coefficients of (WAGNER), ii, 406, 407.  
and distribution of energy (HINSHELWOOD and THORNTON), ii, 1167.  
ions influencing (v. EULER and RUDBERG), i, 135.  
between two liquid phases (JADŁCZYŃSKI, WIECKOWSKI, and KLEIN), ii, 410.  
in mixed solvents (JONES, MCCOMBIE, and SCARBOROUGH), ii, 137; (MCCOMBIE, ROBERTS, and SCARBOROUGH), ii, 554.  
in heterogeneous systems in relation to rate of stirring (KLEIN), ii, 802.  
bimolecular, in solutions (CHRISTIANSEN), ii, 47.  
coupled (WEGSCHEIDER), ii, 47.  
rapid, measurement of (HARTRIDGE and ROUGHTON), ii, 47.
- Velocity of saponification of ionic esters** (BRÖNSTED and DELBANGO), ii, 684.
- Velocity of swelling of gels** (LIEPATOV), ii, 685.
- Velocity of transformation of metastable systems** (STEPANOV), ii, 645.
- $\beta$ -Veratrylacrylic acid**,  $\alpha$ -cyano- (BAKER and ROBINSON), i, 926.
- Veratrylaminoacetyl** (FORSYTH, KELLY, and PYMAN), i, 1167.
- 1-Veratrylhydrohydrastinine**, and 6'-amino-, 6'-nitro-, and their derivatives (HAWORTH, PERKIN, and RANKIN), i, 1314.
- Veratrylideneaminoacetal** (FORSYTH, KELLY, and PYMAN), i, 1167.
- Veratrylnorhydrohydrastinine**, 6'-bromo-, and its salts and formyl derivative and 6'-nitro- (HAWORTH and PERKIN), i, 970.
- $\beta$ -Veratrylpropionic acid**,  $\alpha$ -cyano- (BAKER and ROBINSON), i, 926.
- $\beta$ -Veratrylpropionitrile** (BAKER and ROBINSON), i, 926.
- Veronal**, compound of pyramidone with (PFEIFFER), i, 1318.
- Vesuvius**, radioactivity of gases from (STOKLASA and PENKAVA), ii, 235.

- Vibrio cholerae*, biochemistry of (HIRSCH), i, 479.
- Vicia faba*, proteolytic enzymes in pods of (DANCKWORTH and PFAU), i, 202.
- effect of boron compounds on the growth of (BRENOHLEY and THORNTON), i, 1388.
- Vicianose, preparation of, from gein (HÉRISSEY and CHEYMOL), i, 1383.
- Vine, alkaline chlorosis of (PRATOLONGO), i, 623.
- phosphoric acid and nitrogen in leaves of (LAGATU and MAUME), i, 756.
- tannins in shoots of ripening (PICARD), i, 346.
- See also *Vitis vinifera*.
- Vinegar, acetylmethylcarbinol in (VAN'T HOOFT), i, 772.
- Vinylalkylcarbinols, conversion of, into ethyl alkyl ketones (DELABY and DUMOULIN), i, 632.
- Vinylarsenious oxide,  $\beta$ -chloro- (LEWIS and STIEGLER), i, 1470.
- Vinylarsines, bromo-, chloro-, and chloro-iodo-derivatives (LEWIS and STIEGLER), i, 1470.
- chloro- (HUNT and TURNER), i, 843.
- Vinylarsinic acid,  $\beta$ -bromo-, and  $\beta$ -chloro-, silver salt (LEWIS and STIEGLER), i, 1470.
- Vinylcarbinols, aryl-substituted, and their derivatives (ZIEGLER, RICHTER, and SCHNELL), i, 915.
- poly-arylated, and their derivatives (ZIEGLER, GRABBE, and ULRICH), i, 131; (ZIEGLER), i, 395.
- Vinyldiacetonamine, benzoyl derivatives of (KIPPING and GREASLEY), i, 144.
- 7-Vinyl-7:12-dihydro-7-benzophenarsazine, 7- $\beta$ -chloro- (LEWIS and STIEGLER), i, 1470.
- 2:2'-streptomonoVinylene-4:4'-dicarboethoxy-3:3:5:5'-tetramethylpyrroflavinium salts (KÖNIG), i, 1184.
- 3:3'-streptomonoVinylene-2:2'-dimethylindorhodinium hydroxide, and its salts (KÖNIG), i, 1184.
- 3:3'-streptomonoVinylene-2:2':5:5'-tetramethylindorhodinium salts (KÖNIG), i, 1184.
- Vinylhydroxythiocyanarsine,  $\beta$ -chloro- (LEWIS and STIEGLER), i, 1470.
- Vinylindole, 3- $\omega$ -nitro-, 1-acetyl derivative (MAJIMA and KOTAKE), i, 1450.
- 3-Vinyl-2-methylindole,  $\omega$ -nitro- (SEKA), i, 67.
- 1-Vinylphenanthrene (GADAMER, OBERLIN, and SCHÖLLER), i, 577.
- 6-Vinylphenarsazine, 6- $\beta$ -chloro- (LEWIS and STIEGLER), i, 1470.
- isoViolanthrone, dibromo-, and 4:4'-dichloro- (ZINKE, FUNKE, and PONGRATZ), i, 819.
- dihydroxy- (ZINKE, FUNKE, MATSCHER, WOLFAUER, and LORBER), i, 1436.
- Viscose, plasticity of (VENABLE), ii, 1058.
- Viscosimeter, new (AUERBACH), ii, 589.
- Ostwald (MARTIN), ii, 499.
- Viscosity, measurement of (MARTIN), ii, 499; (DUCLAUX and ERRERA), ii, 1048.
- and its relation to diffusion velocity (COHEN and BRUINS), ii, 280.
- temperatures of equal (HERZ), ii, 1049.
- as a function of volume (DUBIEF), ii, 498.
- during esterification (CAUQUIL), ii, 964.
- of colloidal solutions (SZEGVARI), ii, 111; (FREUNDLICH and SCHALEK), ii, 112; (MATTHÄUS; OSTWALD), ii, 663; (DE WAELE), ii, 777.
- of disperse systems (OSTWALD), ii, 291, 392.
- of reversible emulsions (JOSHI), ii, 776.
- of gases at low temperatures (GÜNTHER), ii, 100.
- and molecular weight of liquids (MACLEOD), ii, 498.
- of liquids at the boiling point (MACLEOD), ii, 1049.
- under pressure (BRIDGMAN), ii, 1143.
- containing dissolved gases (LEWIS), ii, 377.
- of binary mixed liquids (MACLEOD), ii, 280.
- of organic liquids (WÖHLISCH), ii, 277.
- of solutions (DE KOLOSOVSKI), ii, 765.
- effect of, on specific heat of solutions (DE KOLOSOVSKI), ii, 658.
- Vital-red. See Brilliant Congo R.
- Vitamins (SCHEUNERT and HERMERSDÖRFER), i, 617; (GROEBBELS and SPERFELD), i, 1514; (SCHEUNERT and CANDELIN), i, 1515.
- action of ultra-violet light on (SPINKA), i, 212; (ZILVA), i, 485.
- colloid chemistry of (V. HAHN), ii, 664.
- promoting bacterial growth (DAVIDSOHN), i, 108.
- parasympathetic stimulants in extracts of (MORI), i, 1021.
- deficiency of, in pernicious anæmia (DHAR), i, 1221.

- Vitamins**, influence of, on phosphates in blood (v. EULER and MYRBACK), i, 1515.  
 in milk (PRINGLE), i, 1018.  
 antineuritic, effect of ultra-violet light on (WILLIAMS), i, 751.  
 fat-soluble (NELSON and STEENBOCK), i, 484, 1020; (STEENBOCK and BLACK), i, 1020.  
 plant, formation of, by micro-organisms (MOCKERIDGE), i, 106.  
 water-soluble, of beer wort (SOUTHGATE), i, 209.  
 determination of, biochemically (SAGASTUME and SPEGAZZINI), i, 209.
- Vitamin-A** (STEENBOCK, NELSON, and BLACK; BEZSSONOFF; STEENBOCK and NELSON), i, 107.  
 formation of, in germination of (STEFF), i, 1220.  
 occurrence and distribution of, in the body according to age, diet, etc. (SHERMAN and BOYNTON), i, 1018; (SHERMAN and STORMS; SHERMAN and MACLEOD), i, 1019.  
 synthesis of, by *Chlorella* (COWARD), i, 750.  
 physical and chemical properties and derivatives of (TAKAHASHI, MAKAMIYA, KAWAKAMI, and KITASATO), i, 1365.  
 occurrence of copper compounds with (McHARGUE), i, 1515.  
 persistence of, in plant tissues (COWARD), i, 1017.  
 in yeast fat (LUCE and MACLEAN), i, 488.  
 identity of (JAVILLIER, BAUDE, and LEVY-LAJEUNESSE), i, 617.  
 detection of, colorimetrically (ROSENHEIM and DRUMMOND), i, 1515.  
 determination of (SHERMAN and MUNSELL), i, 1018.  
 determination of, physiologically (JAVILLIER, BAUDE, and LEVY-LAJEUNESSE), i, 1364.
- Vitamins-A and -B**, influence of, on diet (EDERER), i, 869.
- Vitamin-B**, effect of phosphate manuring on production of, in plants (HORNE-MANN), i, 628.  
 concentration of (LEVENE and VAN DER HOEVEN; KINNERSLEY and PETERS), i, 1516.  
 basal diet free from (BACHARACH), i, 1220.  
 in dried and evaporated milks (HARTWELL), i, 751.  
 effect of deficiency in, on blood sugar and liver glycogen (RANDOIN and LELESZ), i, 751.
- Vitamin-B**, effect of absence of, on fats and lipoids in blood (IWATSURU), i, 1515.  
 effect of deficiency of, on blood sugar (EGGLETON and GROSS), i, 1220.  
 in excreta of rats (SALMON), i, 1516.  
 effect of, on reproduction (PARKES and DRUMMOND), i, 1021.  
 reaction for (BEZSSONOFF; LEVINE), i, 1220.  
 Jendrassik reaction for (LEVINE), i, 108.  
 effect of bacterial flora on biological detection of (HELLER, McELROY, and GARLOCK), i, 1365.
- Vitamin-C**, synthesis of, in germination (HONEYWELL and STEENBOCK), i, 751.  
 possible isolation of, from cabbage (BEZSSONOFF), i, 751.  
 effect of deficiency in, on urea in blood (RANDOIN and MICHAUX), i, 751.  
 in chicken liver (CARRICK and HAUGE), i, 617.
- Vitamin-D**, formation of, in germinating seeds (STEFF), i, 1221.  
 diets deficient in (MCCOLLUM, SIMMONDS, BECKER, and SHIPLEY), i, 1366.
- Vitamin-E** (EVANS and BURR), i, 1022.  
 in maize, wheat, and hemp-seed (SURE), i, 212.  
 solubility of, in organic solvents (SURE), i, 752.
- Vitis vinifera* (vine), constituents of the sap of (WORMALL), i, 215.
- Vivianite**, synthetic formation of (KURNAKOV), ii, 767.
- Volatility**, law of (MATIGNON), ii, 670.
- Volcanoes**, radioactivity of gases from (STOKLASA and PENKAVA), ii, 235.  
 rare gases from (PIUTTI and BOGGIO-LERA), ii, 1092.
- Volume**, contraction of, on solution (RAKSHIT), ii, 288.  
 of liquid mixtures (LORENZ and HERZ), ii, 101.  
 molecular, and molecular refraction (LORENZ and HERZ), ii, 356.  
 and molecular field (BATSCHINSKI), ii, 932.  
 relation between critical temperature and (LORENZ and HERZ), ii, 25, 183.  
 and internal pressure (SCHUSTER), ii, 1142.  
 changes of, in formation of solid compounds (SASLAVSKY), ii, 933.  
 of crystals (HENGLEIN), ii, 477.  
 of isomerides (WÖHLISCH), ii, 269.  
 of organic liquids (WÖHLISCH), ii, 277.

**Volume**, molecular, of salts at the melting point (LORENZ and HERZ), ii, 840.

### W.

**Walden inversion** (LEVENE and MIKESKA), i, 5; (SEETER and WARD), i, 31, 1128; (MCKENZIE and TUDHOPE), i, 226; (KENYON, PHILLIPS, and TURRELL), i, 507; (TERRY and EICHELBERGER), i, 631.

**Walnut.** See *Juglans regia*.

**Water**, formation of, from its elements in presence of chlorine (NORRISH and RIDEAL), ii, 572.

catalytic synthesis of (LARSON and SMITH; REMY and SCHAEFFER), ii, 563.

physical properties of (MACLEOD), ii, 498.

absorption spectrum of (WITT), ii, 352; (REMY and GÖNNINGEN), ii, 1176.

infra-red absorption spectra of (DREISCH), ii, 627.

vapour, infra-red absorption spectrum of (DESLANDRES), ii, 736.

ultra-violet absorption spectrum of (DIEKE), ii, 180, 927.

emission spectrum of (WATSON), ii, 349.

thermal variation of magnetism of (CABRERA and DUPERRIER), ii, 754.

conductivity of (BORDAS and TOUPAIN), ii, 155.

activity coefficients and ionisation of, in solutions of potassium and sodium chlorides (HARNED), ii, 538.

distilled, hydrogen-ion concentration of (DAWSON), ii, 680.

effect of strong electrolytes on the dielectric constant of (ZAHN), ii, 263.

vapour, heat of adsorption of, by silica gels (PATRICK and GREIDER), ii, 870.

expansion of, on freezing (LAURIE), ii, 762.

vapour, temperature of, from a boiling aqueous solution (REISSMANN), ii, 105.

effect of salts on the vapour pressure of (SIDGWICK and EWBANK), ii, 38.

surface tension of (ALI), ii, 763.

effect of organic vapours on the surface tension of (KORAN), ii, 659.

effect of electrolytes on the diffusion of, through collodion membranes (ADOLPH), ii, 859.

viscosity of (LEROUX), ii, 1048.

adsorption of, on glass and platinum (McHAFFIE and LENHER), ii, 854.

**Water**, adsorption of, by silica gels (PATRICK and EBERMAN), ii, 284.

effect of curvature of surface on solubility of air in (BAYLIS), ii, 980.

structure of films on (ADAM), ii, 195.

influence of surface films on evaporation of (HEDESTRAND), ii, 102; (ADAM), ii, 658.

films on salt solutions, structure of (HARKINS and McLAUGHLIN), ii, 959.

movement of bubbles of gas in (McTAGGART), ii, 509.

capillary rise of, in various metallic tubes (CARVER and HOVORKA), ii, 647.

partial pressure of, in mixtures with sulphuric acid (GREENEWALT), ii, 493.

rôle of, in solids (BALAREFF), ii, 409.

effect of, on chemical reactions (PARSONS), ii, 880.

combination of, in colloids (HÜTTIG), ii, 516.

decomposition of, by metallic couples (HEDGES and MYERS), ii, 306.

fixation and metabolism of, in the organism (FISCHER; SCHADE; HANDOVSKY), ii, 36.

toxic effects of (UNDERHILL and SALICK), i, 613.

distilled, use of, in biological work (CANALS and GENEVEY), ii, 847.

Conductivity water, preparation of (BENCOWITZ and HOTOHKISS), ii, 317.

### NATURAL WATER:—

action of, on copper (HENSTOCK), ii, 696.

presence of iodates in (HICKETHIER and JACOBUCCI), ii, 1197.

**Lake water**, nitrogen in (DOMOGALLA, JUDAY, and PETERSON; PETERSON, FRED, and DOMOGALLA), i, 765.

**River water** of the Rhine, gold and silver in (HABER and JAENICKE), ii, 997.

**River and lake water** of the United States (CLARKE), ii, 323.

**Sea water**, hydrogen-ion concentration of (ATKINS), i, 199.

equilibrium of carbonates and other weak acids in (IRVING), i, 1022.

evolution of iodine from (v. FELLENBERG), ii, 306.

corrosion of metals in (BENGOUGH and MAY), ii, 218.

oxidation in (HARVEY), ii, 1171.

**Spring and mineral waters**, ageing of (BAUDISCH and WELO), ii, 992.

**NATURAL WATER:—**

- Spring and mineral waters**, effect of, on colloids (HENRIJEAN and KOPACZEWSKI; D'ARSONVAL and BORDAS), ii, 291.  
 diuretic action of (STARKENSTEIN), i, 327.  
 Swiss, iodine in (V. FELLENBERG), i, 347.  
**Water analysis:—**  
 distilled, detection of copper in (POIROR), ii, 242.  
 determination of, in mixtures of ether, alcohol, and water (NEWMAN), ii, 156.  
 determination of iron in (HOPKINS), ii, 1096.  
**Water bath**, constant-level (WING), ii, 707.  
**Weights**, molecular, determination of (BERL and RAU), ii, 24; (SADIKOV and MICHAÏLOV), ii, 32; (RASTELLI), ii, 1040.  
 by isothermal distillation (HRYWAKOWSKI), ii, 187.  
 with liquid ammonia as solvent (SCHMID and BECKER), i, 1386; (STOCK and POHLAND), ii, 489.  
 and viscosity of liquids (MACLEOD), ii, 498.  
**Weiss-Curie law**, value of  $\Delta$  in the (CABRERA; DUPERRIER), ii, 173.  
**Wetting and capillarity** (SCHULTZE), ii, 856.  
**Whale**, biological relations of types of (FUSE), i, 1348.  
 cartilage and tendon of (OIKAWA), i, 1349.  
 genital cysts of (OKAZAKI), i, 1348.  
 flesh of (SUZUKI), i, 1349.  
 peritoneal fluid of (FUSE), i, 1349.  
 enzymes of the pancreas of (TAKATA), i, 1349.  
 nature of the stomachs of (TAKATA), i, 1348.  
 synovial fluid of (FUSE), i, 1348.  
 urine of. See Urine.  
 fin-back, blood of. See Blood.  
 sperm, amniotic fluid of (SUZUKI), i, 1350.  
**Whale oil**, South Georgia, fatty acids in (ARMSTRONG and HILDITCH), i, 778.  
**Wheat**, nutrients for culture of (JONES and PEMBER), i, 1030.  
 influence of a mineral fertiliser on development of (CHAUSSIN), i, 623.  
 culture of, with nitrogen, phosphorus, and potassium (PEMBER and McLEAN), i, 1121.  
 influence of soil temperature and moisture on (ECKERSON and DICKSON), i, 217.

- Wheat**, development of grains of (WOODMAN and ENGLEDDOW), i, 217.  
 amino-nitrogen and protein in grains of (SHARP), i, 622.  
 nucleic acid from embryos of, and its sodium salts (THOMAS and DOX), i, 873.  
 vitamin-E in embryos of (SURE), i, 212.  
**Wheat bran**, proteins of (JONES and GERSDORFF), i, 1027.  
**Wheat flour**, gluten proteins from (BLISH and PINCKNEY), i, 176.  
**Wheik**. See *Buccinum undatum*.  
**Wires**, thermal conductivity of (BARRATT and WINTER), ii, 736.  
**Wood** from deciduous trees, chemistry of (HEUSER and BROTZ), i, 889.  
 degradation of, by fungi (WEHMER), i, 521.  
 determination of pentosans in (GIERISCH), i, 1122.  
**Woodruff**. See *Asperula odorata*.  
**Wool**, adsorption of dyes by (SPEAKMAN and BATTYE), ii, 284.  
 absorption of water by (SHORTER and HALL), ii, 732.  
 dyeing of (SPEAKMAN), ii, 515.  
 mordanting of (ELÖD), ii, 531.  
**Wool fat** (LIFSCHÜTZ), i, 327.  
**Wurtzite**, crystal structure of graphite and (BECKENKAMP), ii, 271.

**X.**

- Xanthates**. See under Xanthic acid.  
**Xanthen**, 3-hydroxy-, and its dibromoderivative (SEN and SARKAR), i, 813.  
**Xanthic acid**, salts, analysis of (CALCOTT, ENGLISH, and DOWNING), ii, 606; (HIRSCHKIND), ii, 1212.  
 cadmium and molybdenum salts (CROCHETTI), i, 503.  
 alkylmercuric derivatives of (KOTEN and ADAMS), i, 236.  
**Xanthine oxydase** (DIXON), i, 1010; (DIXON and THURLOW), i, 1213.  
**Xanthione** (SCHÖNBERG, ROSENBACH, KRÜLL, and OSTWALD), i, 1800.  
**Xanthone**, 1-hydroxy-, magnesium salt (ZETSCHE, SILBERMANN and VIELI), i, 1411.  
**Xanthonecarboxylic acids**, and their salts and derivatives (ANSCHÜTZ, STOLTENHOFF, and VOELLER), i, 1274.  
**Xanthophyll**, preparation and properties of (SCHERTZ), i, 1024.  
 determination of (SCHERTZ), i, 871.  
**Xanthopropionic acid**, and its sodium salt (LEVENE and MIKESKA), i, 512.

- (*o*-Xylene, *Me:Me* = 1:2; *m*-xylene, *Me:Me* = 1:3; *p*-xylene, *Me:Me* = 1:4.)
- Xanthopterin**, and its barium salt, from *Gonypteryx rhamni* (WIELAND and SCHÖPF), i, 1465.
- Xanthopyrrolecarboxylic acid**, synthesis of (FISCHER and KLARER), i, 577.
- α*-Xanthosuccinamic acid** (LEVENE and MIKESKA), i, 6.
- Xanthosuccinic acid**, and its sodium salts (LEVENE and MIKESKA), i, 6, 512.
- Xenon hydrate** (DE FORORAND), ii, 812.
- Ximenia americana*** (wild plum), constituents of (ANON.), i, 764.
- m*-Xylene**, electrochemical oxidation of (FIGHTER and MEYER), i, 381.  
action of aluminium chloride on a mixture of phenanthrene and (SCHLAARSHMIDT, MAYER-BUGSTRÖM, and SEVON), i, 241.
- Xylenes**, extraction of, from crude xylol (PATTERSON, McMILLAN, and SOMERVILLE), i, 124.
- Xylenes**, *ω*-bromo-, isomeric, polarity effects in (SHOESMITH and SLATER), i, 16.
- p*-Xylene-2:6-disulphonyl chloride** (CHOUFOER), i, 896.
- p*-Xylene-5-sulphonyl chloride, 2-nitro-** (CHOUFOER), i, 896.
- as-m*-Xylidine**, oxidation of, and its methyl derivatives (FIGHTER and MÜLLER), i, 805.
- p*-Xylidine hydroferrieyanide** (CUMMING), i, 122.
- p*-2-Xylidine, 5-chloro- hydrochloride** (WHEELER and MORSE), i, 22.
- ω-as-m*-Xylidinoacetophenone-*o*-tolyl-hydrazone** (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.
- Xylidino-*m*-xylothiazole**, and its derivatives (LEVI), i, 445.
- Xylindain**, and its derivatives (KÜGL and V. TAEUFFENBACH), i, 1441.
- Xylol**, extraction of xylenes from (PATTERSON, McMILLAN, and SOMERVILLE), i, 124.
- 8-Xyloyl-*α*-naphthoic acids** (MASON), i, 33.
- 4-*m*-Xylol benzyl ether** (SCHORIGIN), i, 1404.
- β-p*-Xylylaminoethyl alcohol**. See Ethyl-*p*-xylidine, *N*-hydroxy-.
- p*-Xylylchrysofluorene** (DILTHEY), i, 652.
- o*-Xylylene sulphide** (V. BRAUN, BAYER, and KAISER), i, 1445.
- 5-Xylylimino-2-thion-2:3:4:5-tetrahydro-1:3:4-thiodiazole**, and its derivatives (GUHA and RAY), i, 703.
- 1-*as-m*-Xylylindazole, 4-nitro-** (V. AUWERS and FRESSE), i, 1102.
- 8-*m*-Xylylmethylcarbinol** (V. AUWERS, LECHNER, and BUNDESMANN), i, 266.
- 4-*m*-Xylol methyl ketoximes, 5-hydroxy-**, and their derivatives (V. AUWERS and JORDAN), i, 264.
- 3-Xylirhodanylidene- $\Delta^5:9'$ -oxindoles** (HANN), i, 987.
- 4-*m*-Xylythiosemicarbazide** (GUHA and RAY), i, 703.

## Y.

- Yajaine** (BARRIGA VILLALBA), i, 828.
- Yajenine** (BARRIGA VILLALBA), i, 828.
- Yamamoto**, fruit of (KOMATSU and NODZU), i, 1025.
- Yeast**, growth of (PESKETT), i, 1011, 1012.  
effect of ammonium salts on (FULMER), i, 1508.  
effect of calcium sulphate on the growth and fermentation of (RICHARDS), i, 1011.  
non-homogeneity of (VAN NIEL and HOOFT), i, 1236.  
acceleration of the activity of, by a biocatalyst (V. EULER and MYRBÄCK), i, 745.  
effects of marmite and of, on calcification (KORENCHEVSKY and CARR), i, 211.  
antineuritic concentrates of (KINNERSLEY and PETERS), i, 1516.  
formation of acetylmethylcarbinol and 2:3-butyleneglycol in fermentation by (KLUYVER and DONKER), i, 1215.  
toxicity of acids towards (TAYLOR), i, 1011.  
reserve carbohydrates in (WARKANY), i, 105.  
carbohydrate and fat metabolism in growth of (MACLEAN and HOFFERT), i, 204.  
synthesis of coproporphyrin by (FISCHER and FINK), i, 105.  
extracts, action of, on dextrose (KUHN and V. GRUNDHERR), i, 203.  
enzymes of (NEUBERG), i, 336.  
fermentation of galactose by (V. EULER and LÖVGREN), i, 1214; (ABDERHALDEN), i, 1362.  
glycogen from (LING, NANJ, and PATON), i, 1011.  
increase in invertase content of (WILLSTÄTER, LOWRY, and SCHNEIDER), i, 1214.  
fate of invertase of, in the animal organism (NOGAKI), i, 745.  
action of, on lactic acid (MYRBÄCK and EVERITT), i, 105.

- Yeast**, fermentation of mannitol by (LVOV), i, 1509.  
 metabolism of (BALLS and BROWN), i, 476.  
 effect of nitrates on (FERNBACH and NICOLAU), i, 477.  
 cells, nitrogenous equilibrium of (v. EULER and SANDBERG), i, 1213.  
 changes in phosphates and glycogen by means of (v. EULER, MYRBÄCK, and KARLSSON), i, 744.  
 adsorption of phosphoproteins of, by various adsorbents (FODOR and SCHÖNFELD), ii, 857.  
 cleavage of polypeptides by (FODOR and EFSTEIN), i, 1214; (FODOR, BERNFELD, and SCHÖNFELD), i, 1215.  
 porphyrins in (FISCHER and FINK), i, 866.  
 action of reductase of (LVOV), i, 1508.  
 sulphur-containing constituent of (SUZUKI, ODAKE, and MORI), i, 338.  
 presence of trehalose in (E. M. and F. C. KOCH), i, 1508.  
 crystalline bios-like substance from (EDDY, KERR, and WILLIAMS), i, 342.  
 relations between the water-soluble growth factors in (v. EULER and SWARTZ), i, 209.  
 vitamin-A in the fat of (LUCE and MACLEAN), i, 483.  
 co-enzyme of (v. EULER and MYRBÄCK), i, 105.  
 zymocasein from (LÜERS and NOWAK), i, 338.  
 dried (v. EULER and WESTLING), i, 203; (SOBOTKA), i, 865.  
 fermentation by (HARDEN), i, 1010.  
 oxygenated, action of, on glycerol and on  $\beta$ -hydroxybutyric acid (MARIAN), i, 105.  
 effect of insulin on the functions of (FÜRTH), i, 107.  
**Yeast-nucleic acid**, hydrolysis of (JONES and PERKINS), i, 487.  
**Yttrium**, arc spectrum of (MEGGERS and MOORE), ii, 612.  
 arc and spark spectra of (MEGGERS), ii, 77.  
**Yttrium salts**, solubility of (CREW, STEINERT, and HOPKINS), ii, 190.  
**Yttrium oxide**, preparation of (PRANDTL), ii, 439.
- Z.**
- Zanthoxylum ovatifolium*, constituents of oil from (SIMONSEN), i, 565.
- Zea mays*, proteins from the leaves of (CHIBNALL and NOLAN), i, 215.  
**Zeeman effect** (HEISENBERG), ii, 3, 729; (PAULI), ii, 251; (ORNSTEIN and BURGER; LANDÉ), ii, 340; (BACK), ii, 341, 917; (ZEEMAN), ii, 614; (HICKS; ORNSTEIN, BURGER, and VAN GEEL), ii, 729; (MOSHAR-RAFA; CONWAY; GIANFRANCESCO), ii, 830; (KRONIG), ii, 917; (KAPITZA and SKINNER), ii, 918; (VAN GEEL; TARTAKOVSKI), ii, 1016.  
**Zeolites**, properties and occurrence of (WEIGEL), ii, 709.  
 combination of water in (ROTHMUND), ii, 710.  
**Zinc**, occurrence of, in soils, plants, and animals (McHARGUE), i, 1023.  
 structure of (COLLINS), ii, 926.  
 shifting of lines in spectrum of (FUKUDA), ii, 1101.  
*K*-absorption spectrum of (WALTER), ii, 611.  
 atomic and band spectra of (HULTHÉN), ii, 1113.  
 infra-red line spectrum of (RANDALL and ST. PETER), ii, 1101.  
 spark spectrum of (v. SALIS), ii, 334.  
 vacuum spark spectrum of (SAWYER and MARTIN), ii, 1100.  
 optical constants of crystals of (GRABER), ii, 1041.  
 conductivities of (SCHOFIELD), ii, 273.  
 potentials of, in cyanide solutions (WALKER, SORRELS, and BRECKENRIDGE), ii, 1066.  
 polarisation of, in alkaline solution (JIRSA and LORIS), ii, 45.  
 electro-deposition of (MARSHALL), ii, 808.  
 absorption coefficient of electrons in vapour of (BRODE), ii, 1020.  
 expansion coefficient of (BORELIUS and JOHANSSON), ii, 27.  
 thermal expansion of (GRÜNEISEN and GOENS), ii, 488.  
 vapour pressure and entropy of (RODEBUSH and DIXON), ii, 492.  
 physical properties of crystals of (GRÜNEISEN and GOENS), ii, 22.  
 tensile strength of (MASING and PÓLÁNYI), ii, 370; (SCHMID), ii, 752.  
 effect of colloids on the displacement of lead and copper by (GRAY), ii, 578.  
 effect of impurities on the solubility of, in acids (VONDRAČEK and IZAK-KRIŽKO), ii, 836.  
 solubility of, in hydrochloric acid (IPATIEV and VERCHOVSKI), ii, 1069.

**Zinc**, effect of emulsoids on the solution of, in solutions of copper, lead, and nickel salts (FRIEND and TIDMUS), ii, 306.

corrosion of, in sea-water (BENGOUGH and MAY), ii, 218.

physiological effects of iron and (BERTRAND and NAKAMURA), i, 1114.

**Zinc alloys with aluminium** (TANABE), ii, 204; (ISHIHARA), ii, 298, 786.  
tensile strength of (ELAM), ii, 954.

decomposition of (FRAENKEL and GOEZ), ii, 314.

with aluminium and copper (HANSON and GAYLER), ii, 974.

with antimony and lead (TAMMANN and DAHL), ii, 535.

with copper (GENDERS and BAILEY), ii, 297.

$\beta$ -transformations in (HAUGHTON and GRIFFITHS), ii, 973.

equilibrium in (ITSUKA), ii, 651.

with copper, gold, and silver, Röntgen ray analysis of (WESTGREN and PHRAGMÉN), ii, 746.

with copper and magnesium, determination of magnesium in (SCHÜRMANN and SCHOB), ii, 902.

with gold (SALDAU), ii, 205.

with mercury and sodium, velocity of reaction of, with aqueous solutions (KLEIN), ii, 802.

with tin, electrolysis of (KREMAN and BAUKOVAC), ii, 679.

**Zinc chloride**, equilibrium of pyridine with (MASON and MATHEWS), ii, 1063.

compounds of proteins with (PAULI and SCHÖN), ii, 198.

additive compound of 3:5-dibromo-*o*-toluidine and (HANN and SPENCER), i, 653.

hydroxide, two crystal forms of (FRICKE), ii, 484.

precipitation of, electrometrically (BRITTON), ii, 1203.

oxide, solubility of, in water (REMY and KUELMANN), ii, 119.

selenide (MOSE and ATYNSKI), ii, 583.

sulphate, specific heat of aqueous solutions of (COHEN, HELDERMAN, and MOESVELD), ii, 126.

solubility of hydrates of (BURY), ii, 119.

solubility of, in water (COHEN and MOESVELD; COHEN and HETTER-SCHIE), ii, 652.

action of lead iodide with (STOFFELA), ii, 1064.

**Zinc sulphide**, scintillations in (STALONY-DABROWSKI), ii, 1027.

Hall effect with crystals of (LENZ), ii, 920.

**Zinc organic compounds** :—

**Zinc diethyl**, preparation of (MEYER), i, 893.

preparation and purification of (DENNIS and HANCE), i, 798.

diphenylcarbazines (FEIGL and LEDERER), i, 171.

phenylarsine iodide (JOB, REICH, and VERGNAUD), i, 173.

**Zinc determination and separation** :—

determination of (JÄRVINEN), ii, 602; (CONGDON, GUSS and WINTER), ii, 1002.

determination of, electrolytically, in presence of copper (SPRINGER), ii, 241.

determination of, gravimetrically (MARCKWALD and GEBHARDT), ii, 1002.

determination of, in organic matter (LUTZ), ii, 825.

determination of, volumetrically (BEYNE), ii, 69, 438; (KIEFER), ii, 70.

recovery of, and its determination in biological material (THOMPSON), i, 1489.

separation of cadmium and (LUFF), ii, 159.

separation of cobalt, manganese, nickel, and (LEMARCHANDS), ii, 242.

separation of nickel and (KLING and LASSIEUR), ii, 439.

**Zinc wire**, single crystal, thermo-electric effect of (LINDER; BRIDGMAN), ii, 1136.

**Zincite**, experiments on (DITTLER), ii, 1184.

**Zingerone**, preparation of (NOMURA), i, 1157.

homologues of (NOMURA and HOTTA), i, 1156.

**isoZingerone**. See 4-Methoxyphenyl-ethyl methyl ketone,  $\beta$ -3-hydroxy-.

**Zirconium**, atomic weight of (HÖNIG-SCHMID, ZINTL, and GONZÁLEZ), ii, 174; (HEVESY), ii, 255.

preparation of (VAN ARKEL and DE BOER), ii, 1193.

**Zirconium compounds**, isomorphism of uranium and (FERNANDES), ii, 1133.

**Zirconium carbide and nitride** (FRIEDERICH), ii, 374.

tetrachloride compounds of, with  $\beta$ -diketones (DILTHEY), i, 1473.

double fluorides, solubility of (HEVESY, CHRISTIANSEN, and BERGLUND), ii, 505.

Zirconium hydroxide precipitation of, electrometrically (BRITTON), ii, 1203.  
nitride (FRIEDERICH and SITTIG), ii, 420.  
oxide, density of (HEVESY and BERGLUND), ii, 25.  
phosphate (HEVESY and KIMURA), ii, 1085.  
solubility of hafnium phosphate and (HEVESY and KIMURA), ii, 1147.  
action of acids and bases on (DE BOER and VAN ARKEL), ii, 1185.  
sulphate, isomorphism of cerium sulphate and (FERNANDES), ii, 748.  
Zirconium separation:—  
separation of, from its ores (DE BOER and VAN ARKEL), ii, 705.

Zirconium separation:—  
separation of, from cerium, thorium, and titanium (MOSER and LESSING), ii, 718.  
separation of hafnium and (NAAMLOOZE VENNOOTSCHAP PHILIPS' GLOEILAMPENFABRIKEN), ii, 62, 63; (DE BOER and VAN ARKEL), ii, 243; (MARQUIS, P. and G. URBAIN), ii, 699.  
separation of, from iron (WENGER and MÜLLER), ii, 1207.  
Zirconium ores, hafnium content of HEVESY and JANTZEN), ii, 430.  
Zymase, formation of, in plants (PALLADIN and ILLJUVIEV), i, 1519.  
activity of (PARIS), i, 475.  
fermentation with (JENSEN), i, 337.  
Zymocasein from yeast (LÜERS and NOWAK), i, 338.

# ERRATA.

## VOL. 126 (ABSTRACTS, 1924).

Page Line  
i, 273 26 for "KERNER" read "KIRNER."

## VOL. 128 (ABSTRACTS, 1925).

i, 30 9\* ,, "*a-cyano- $\beta$ -salicylpropionic acid*" read "*a-cyano- $\beta$ -salicylpropionic acid*," and for "*a-cyano- $\beta$ -m-tolylpropionic acid*" read "*a-cyano- $\beta$ -m-hydroxyphenylpropionic acid*."  
i, 298 14—15 ,, "*ethyl 3-aldehydo-5-methylindole-2-carboxylate*" read "*3-aldehydo-5-methylindole-2-carboxylic acid*."  
i, 495 26 ,, "*dipropylallylammonium iodide*" read "*dipropyldiallylammonium iodide*."  
i, 510 26\* ,, "MÜLLER" read "MILLER."  
i, 743 6\* Insert author's name, "S. THURLOW."  
i, 759 7, 9, 18 and 20 for "*Mercurialis*" read "*Mercurialis*."  
i, 830 16 and 18 for "*Columba*" read "*Calumba*."

INSTRUCTIONS TO ABSTRACTORS,  
GIVING THE  
NOMENCLATURE AND SYSTEM OF NOTATION  
ADOPTED IN THE ABSTRACTS

1  
2

# INSTRUCTIONS TO ABSTRACTORS,

GIVING THE

## NOMENCLATURE AND SYSTEM OF NOTATION

### ADOPTED IN THE ABSTRACTS.

THE object of the British Chemical Abstracts is to furnish a concise account of the progress of chemical science and industry. It must be understood that as the abstracts are prepared for the information of chemists in general, they cannot possibly be made so full or so detailed as to obviate on the part of those who are engaged on special investigations the necessity of consulting the original memoirs.

1. Titles of papers must be given literally, but unnecessary words such as "The," "Improvements in," "Process for the," etc., should be omitted. Where the original title is not sufficiently informative, an addition may be made in [     ], thus:

Electrochemical reduction [of nitro-compounds].

The names (with initials) of authors should be clearly written, followed by the abbreviated title of the Journal (see p. 14), the year, volume number, and first and last pages of paper, thus:

Dehydrogenation in presence of catalysts. M. G. STANTON and C. J. HOWE (J. Amer. Chem. Soc., 1926, 48, 1873-1882).—

2. Before beginning to write the abstract, the whole of the original paper must be read, in order to obtain a clear and connected idea of its contents and to form a judgment of its importance and of the scale on which the abstract should be made.

3. In the case of papers dealing with subjects not strictly chemical, the abstract should refer only to matters of chemical interest in the original.

4. The abstract should consist mainly of the expression, in the abstractor's own words, of the substance of the paper. Authors' summaries or conclusions may be found useful as the basis of abstracts, but in nearly every case it will be found necessary to supplement these with data from the body of the paper.

5. The abstract should be made as short as is consistent with a clear and accurate statement of the author's views and results. As the chief function of an abstract is to be informative, it should recount the achievements of the work, not merely its scope.

6. A concise statement showing the general trend of the investigation should be given at the commencement of those abstracts where the nature of the original permits of it.

7. If an abstract of a paper on the same subject, either by the author of the paper abstracted, or by some other author, has already appeared, reference to this should be made.

8. Matter which has appeared once in the *Abstracts* is not to be abstracted again, a reference being given to the volume in which the abstract may be found.

9. The abstracts, including those of Patents, should contain a record of all new compounds; the names of these are printed in italics and should therefore be underlined in MS. Crystal form need not be stated unless some special significance attaches to it, and it is not generally necessary to mention that a compound is colourless, or that a nitro-compound or picrate is yellow, etc. As a rule, details of methods of preparation or analysis, or generally speaking of work, are to be omitted, unless such details are essential to the understanding of the results, or have some independent value. Further, comparatively unimportant compounds, such as the inorganic salts of organic bases or acids, should be mentioned quite shortly. Merely qualitative statements as to solubility should as a rule be omitted. On the other hand, data such as melting and boiling points, sp. gr., specific rotation, etc., must be given in every case unless recorded in earlier papers.

10. There is to be no duplication of abstracts in the A and B sections. When papers marked for abstraction for A contain matter of technical interest, or for B matter of purely scientific interest, this should be included in the abstract.

11. Abstractors should not attempt to deal with papers sent to them which they consider too far outside their scope. Further, they should notify the Editor if more papers are being sent to them than they can handle satisfactorily.

12. The Editor will be glad if abstractors will direct his attention to any papers which, in their opinion, merit notice and have not been abstracted, or to those papers which, although marked, do not appear to be worthy of an abstract.

13. Abstracts of patents should be based on the "Claims," supplemented where necessary by matter from the body of the specifications. Abstractors should notify the Editor if material sent to them for abstraction is insufficient for the production of an intelligible abstract, or if the patent appears to be devoid of scientific foundation. Illustrations should be used when required for a proper understanding of the invention.

In English and Foreign Patents the date is the date of application; when "a convention date" is given this should be added, thus: "Conv., 12. 9. 24." For U.S. Patents the date is that of the Official Gazette containing the claims; the date of filing should also be given thus: "Appl., 25. 6. 23"; serial numbers are not noted.

## 14. The following abbreviations are permitted:—

melting point .....	m. p.
freezing point .....	f. p.
boiling point at 240° under 35 mm. pressure .....	b. p. 240°/35 mm.
density 1.462 at 20° compared with water at 4°...	$d_4^{20}$ 1.462
observed rotation at 17° .....	$\alpha_D^{17}$
specific rotation at 17° .....	$[\alpha]_D^{17}$
specific refraction for D line at 10° .....	$n_D^{10}$
atomic weight .....	at. wt.
molecular weight .....	mol. wt.
molecule .....	mol.
gram-molecule.....	g.-mol.
atmospheres.....	atm.
with decomposition (in connexion with m. p.).....	decomp.
absolute (temperature) .....	Abs.
corrected (do.).....	corr.
gram-calories .....	cal.
kilogram-calories .....	Cal
British thermal units .....	B.Th.U.
grams .....	g.
kilograms .....	kg.
milligrams .....	mg.
centimetres .....	cm.
decimetres .....	dm.
cubic centimetres .....	c.c.
metres .....	m.
millimetres .....	mm.
normal (for solutions) .....	N
electromotive force.....	E.M.F.
potential difference.....	P.D.
for example.....	e.g.
that is .....	i.e.
namely .....	viz.
per cent. ....	%

## Nomenclature.

15. Employ names such as *sodium chloride*, *potassium sulphate* for inorganic compounds, and use the terminals *ous* and *ic* only in distinguishing compounds of different orders derived from the same elementary radical; such, for instance, as mercurous and mercuric chlorides, sulphurous and sulphuric acids.

16. Term compounds of metallic radicals with the OH group *hydroxides* and not hydrates, the name hydrate being reserved for compounds supposed to contain water of combination or crystallisation.

17. Term salts containing an amount of metal equivalent to the displaceable hydrogen of the acid, *normal* and not neutral salts, and assign names such as sodium hydrogen sulphate, disodium hydrogen

phosphate, etc., to the acid salts. Basic salts as a rule are best designated merely by their *formulae*.

18. Names in common use for oxides should be employed, for example: NO, nitric oxide; CO<sub>2</sub>, carbon dioxide; P<sub>4</sub>O<sub>10</sub>, phosphoric oxide; As<sub>4</sub>O<sub>6</sub>, arsenious oxide; Fe<sub>2</sub>O<sub>3</sub>, ferric oxide.

19. In open chain compounds, Greek letters must be used to indicate the position of a substituent, the letter  $\alpha$  being assigned to the first carbon atom in the formula, except in the case of CN and CO<sub>2</sub>H, for example, CH<sub>3</sub>·CH<sub>2</sub>·CH<sub>2</sub>·CH<sub>2</sub>I  $\alpha$ -iodobutane, CH<sub>3</sub>·CH<sub>2</sub>·CHCl·CN,  $\alpha$ -chlorobutyronitrile.

20. Isomeric open chain compounds must be represented as substitution derivatives of the longest carbon chain in the formula; for example,

should be termed  $\beta\gamma$ -dimethylpentane, not methylethylisopropylmethane, and  $\text{CH}_3 \begin{array}{c} \text{CH}_3 \\ \diagup \\ \text{CH} \end{array} \cdot \text{CH} \begin{array}{c} \diagdown \\ \text{CH}_3 \\ \text{CO}_2\text{H} \end{array}$  or CH<sub>3</sub>·CHMe·CHMe·CO<sub>2</sub>H should be termed  $\alpha\beta$ -dimethylbutyric acid, not  $\alpha\beta\beta$ -trimethylpropionic, or  $\alpha$ -methylisovaleric, or methylisopropylacetic acid.

21. Use names such as methane, ethane, etc., for the normal paraffins or hydrocarbons of the C<sub>n</sub>H<sub>2n+2</sub> series of the form CH<sub>3</sub>·[CH<sub>2</sub>]<sub>n</sub>·CH<sub>3</sub>, etc. Term the hydrocarbons C<sub>2</sub>H<sub>4</sub> and C<sub>2</sub>H<sub>2</sub> ethylene and acetylene respectively (not ethene and ethine). Homologues of the ethylene series are to be indicated by the suffix *-ene*, and those of the acetylene series, wherever possible, by *-ine*. Adopt the name allene for the hydrocarbon CH<sub>2</sub>:C:CH<sub>2</sub>.

22. Distinguish all hydroxyl derivatives of hydrocarbons by names ending in *ol*. Alcohols should be spoken of as mono-, di-, tri-, or n-hydric, according to the number of OH groups. Compounds which are not alcohols, but for which names ending in *ol* have been used, are to be represented by names ending in *ole*, if a systematic name cannot be given, thus anisole not anisol, indole not indol. Compounds such as MeONa, PhONa, etc., should be termed sodium methoxide, sodium phenoxide, etc.

23. The radicals indicated in the name of a compound are to be given in the order chloro-, bromo-, iodo-, fluoro-, nitro-, nitroso-, amino-, imino-, hydroxy-, aldehydo-, keto-, thiocyano-, acyloxy,\* alkyloxy,\* acyl,\* alkyl.\*

24. Compounds analogous to the acids of the lactic series containing the OH group should be termed *hydroxy*-derivatives, and not *oxy*-derivatives; for example, hydroxyacetic and not oxyacetic acid. Compounds containing the analogous groups OEt, OPh, OAc, etc., should in like manner be termed *ethoxy*-, *phenoxy*-, *acetoxy*-derivatives. Thus  $\alpha$ -ethoxypropionic acid, OEt·CHMe·CO<sub>2</sub>H, instead of ethyl-lactic acid;

\* In these groups, closed chain radicals precede open chain radicals (e.g., benzoyl, acetyl, or phenyl, methyl); within the same section, more saturated precede less saturated (e.g., cyclohexyl, phenyl, styryl) or less complex, more complex (e.g., phenyl, naphthyl), univalent radicals precede bivalent, and so on.

3:4-diethoxybenzoic acid,  $(\text{OEt})_2\text{C}_6\text{H}_3\cdot\text{CO}_2\text{H}$ , instead of diethylprotocatechuic acid; and  $\alpha$ -acetoxypropionic acid,  $\text{OAc}\cdot\text{CHMe}\cdot\text{CO}_2\text{H}$ , instead of acetyl-lactic acid. Terms such as diethylprotocatechuic acid should be understood to mean a compound formed by the displacement of hydrogen atoms in the hydrocarbon radical of protocatechuic acid by ethyl, thus,  $\text{C}_6\text{H}(\text{Et})_2(\text{OH})_2\cdot\text{CO}_2\text{H}$ , and not  $\text{C}_6\text{H}_3(\text{OEt})_2\cdot\text{CO}_2\text{H}$ , just as dibromoprotocatechuic acid is understood to be the name of a compound of the formula  $\text{C}_6\text{HBr}_2(\text{OH})_2\cdot\text{CO}_2\text{H}$ .

25. The term *ether* should be restricted to the oxides of hydrocarbon radicals and their derivatives, and the esters should be represented by names similar to those given to metallic salts.

26. When a substituent is one of the groups  $\text{NH}_2$ ,  $\text{NHR}$ ,  $\text{NR}_2$ ,  $\text{NH}$ , or  $\text{NR}$ , its name should end in *ino*; for example,  $\beta$ -aminopropionic acid,  $\text{NH}_2\cdot\text{CH}_2\cdot\text{CH}_2\cdot\text{CO}_2\text{H}$ ,  $\beta$ -anilinoacrylic acid,  $\text{NHPh}\cdot\text{CH}:\text{CH}\cdot\text{CO}_2\text{H}$ ,  $\alpha$ -iminopropionic acid,  $\text{NH}:\text{CMe}\cdot\text{CO}_2\text{H}$ . When, however, the  $\text{NH}_2$  group is substituted with an acid residue such as acetyl it becomes acetamido, etc.

27. Compounds of the radical  $\text{SO}_3\text{H}$  should, whenever possible, be termed sulphonic acids, or failing this, sulpho-compounds; for example, benzenesulphonic acid, sulphobenzoic acid.

28. Basic substances should invariably be indicated by names ending in *ine*, as aniline instead of anilin, the termination *in* being restricted to certain neutral compounds, viz., glycerides, glucosides, bitter principles, and proteins, such as palmitin, amygdalin, albumin. The compounds of basic substances with hydrogen chloride, bromide, or iodide should always receive names ending in *ide* and not *ate*, as morphine hydrochloride and not morphine hydrochlorate.

29. The Chemical Society's Collective Index (1913-1922) should be adopted as the standard of reference on questions of nomenclature not provided for in the preceding sections.

### Notation.

30. In empirical formulæ the elements are to be given in the order C, H, O, N, Cl, Br, I, F, S, P, and the remainder alphabetically.

31. Equations should be omitted unless essential to the understanding of the results; as a rule, they should not be written on a separate line, but should "run on" with the text.

32. To economise space, it is desirable:

- (a) That *dots* should be used instead of *dashes* in connecting contiguous symbols or radicals, whenever this does not interfere with the clearness of the formula.
- (b) That formulæ should be shortened by the judicious employment of the symbols Me for  $\text{CH}_3$ , Et for  $\text{C}_2\text{H}_5$ , Pr<sup>a</sup> for  $\text{CH}_2\cdot\text{CH}_2\cdot\text{CH}_3$ , Pr<sup>s</sup> for  $\text{CH}(\text{CH}_3)_2$ , Bu for  $\text{CH}_2\cdot[\text{CH}_2]_3$ , Ph for  $\text{C}_6\text{H}_5$ , Ac for  $\text{CO}\cdot\text{CH}_3$ , and Bz for  $\text{CO}\cdot\text{C}_6\text{H}_5$ .
- (c) That formulæ should be written *in one line* whenever this can be done without obscuring their meaning.

33. In representing the constitution of benzene derivatives, the relative positions of the radicals in the symbol of benzene should be indicated by numerals, instead of by means of the hexagon formula.

- (a) The abbreviations *o*-, *m*-, and *p*-, should be used in place of 1 : 2- or ortho-, 1 : 3- or meta-, and 1 : 4- or para.
- (b) In numbering positions in the case of substitution derivatives of phenol, aniline, benzonitrile, benzoic acid, benzenesulphonic acid, benzaldehyde, and toluene, the characteristic radical of each of these parent substances is to be regarded as in position 1 (compare Chemical Society's Collective Index).
- (c) Names of substitution derivatives should be given in such a way that the position of the substituent is indicated by a numeral prefixed; for example :—

34. In representing the constitution of derivatives of other cyclic hydrocarbons, graphic formulæ should not be employed, but the system of numbering positions indicated in Richter's *Lexikon der Kohlenstoff-Verbindungen* (3rd edition, 1910, pp. 14—26) should be used, pending the adoption of a scheme by the International Committee.

35. Attention is directed to the list of physico-chemical symbols on pp. 10–13, which should be used whenever possible, and also to the list of radicals which appears at the end of the Chemical Society's Collective Index.

#### Manuscript.

36. In view of the difficulty of dealing with MSS. of widely varying sizes, abstracts must be written on quarto paper (8×10 in.).

37. Each abstract, however short, should be written on a separate sheet.

38. When an abstract exceeds a sheet in length, the sheets must be fastened together by means of gum at the top left-hand corner.

39. The name of the abstractor must be written at the end of the abstract.

40. Abstracts, whether in typescript or MS., should have a wide margin at the left side and sufficient space between the lines for insertion of corrections.

**Proofs.**

41. Abstractors are expected to read and correct proofs carefully, and to check all names, formulæ, and figures against MSS.

42. All proofs, however small, must be returned to the Editor not later than 24 hours after receipt from the printers.

\* \* The Editor's decision, in all matters connected with the Abstracts, must be considered final.

*List of Physico-chemical Symbols adopted by the Chemical Society.*

[See J.C.S., 1921, 119, 502—512.]

1. *Mathematical Symbols.*

	Usual symbol.	Alternative symbol.
Base of natural (Napierian) logarithms ...	$e$	
Diameter .....	$d$	
Radius .....	$r$	
Ratio of circumference to diameter .....	$\pi$	
Summation .....	$\Sigma$	
Variation .....	$\delta$	
Total differential .....	$d$	
Partial differential .....	$\partial$	

2. *Universal Constants.*

Acceleration due to gravity .....	$g$	
Mechanical equivalent of heat .....	$J$	
Avogadro's constant [number of molecules in 1 gram-molecule (mole)] .....	$N$	
Gas constant per mole .....	$R$	
Faraday's constant (number of coulombs per gram-equivalent of an ion) .....	$F$	
Charge on an electron .....	$e$	

3. *General Physics and Chemistry.*

Length .....	$l$	
Height .....	$h$	
Mass .....	$m$	
Time .....	$t$	
Volume .....	$v, V$	
Density (mass per unit volume) .....	$d$	$D$
Pressure .....	$p, P$	
Concentration .....	$c, C$	
Mole fraction .....	$x$	
Critical constants: pressure, volume, tem- perature (centigrade), temperature (absolute), density .....	$\left\{ \begin{array}{l} p_c, v_c, \\ t_c, T_c, \\ d_c \end{array} \right.$	
Reduced quantities: pressure, volume, temperature, density .....	$\left\{ \begin{array}{l} p_r, v_r, \\ t_r, T_r, d_r \end{array} \right.$	
van der Waals's constants .....	$a, b$	
Fluidity .....	$\phi$	
Viscosity .....	$\eta$	
Surface tension .....	$\gamma$	$\sigma$
Diffusion coefficient .....	$\Delta$	
Atomic weight .....	$A$	
Molecular weight .....	$M$	
Velocity coefficient of reaction .....	$k$	
Equilibrium constant .....	$K, (K_c, K_p)$	
van't Hoff coefficient .....	$i$	
Degree of dissociation (electrolytic, thermal, etc.) .....	$\alpha$	

## 4. Heat and Thermodynamics.

	Usual symbol.	Alternative symbol.
Temperature (centigrade) .....	$t$	$\theta$
Temperature (absolute) .....	$T$	
Critical temperature .....	$t_c, T_c$	
Reduced temperature .....	$t_r, T_r$	
Critical solution temperature .....	$t_{cs}, T_{cs}$	
Quantity of heat .....	$Q$	
Entropy .....	$S$	
Specific heat .....	$c$	
Specific heat at constant pressure .....	$c_p$	
Specific heat at constant volume .....	$c_v$	
Ratio of specific heats, $c_p : c_v$ .....	$\gamma$	
Molecular heat .....	$C$	
Molecular heat at constant pressure .....	$C_p$	
Molecular heat at constant volume .....	$C_v$	
Latent heat per gram .....	$l$	
Latent heat per mole .....	$L$	
Maximum work (diminution of free energy) .....	$A$	

## 5. Optics.

Wave-length of light .....	$\lambda$	
Refractive index .....	$n$	$n_r$
Specific refractive power (Gladstone and Dale) .....	$r_G, [r_G]_\lambda$	
Specific refractive power (Lorentz and Lorenz) .....	$r_L, [r_L]_\lambda$	
Molecular refractive power .....	$\left\{ \begin{array}{l} R_G, R_L \\ [R_G]_\lambda, [R_L]_\lambda \end{array} \right.$	
Angle of optical rotation .....	$\alpha$	
Specific rotatory power .....	$[\alpha]$	
Molecular rotatory power .....	$M[\alpha]$	
Specific magnetic rotation .....	$[\omega]$	
Molecular magnetic rotation .....	$M[\omega]$	

## 6. Electricity and Magnetism.

Quantity of electricity .....	$Q$	
Current intensity .....	$I$	
Resistance .....	$R$	$W$
Electromotive force .....	$E$	
Electrode potential, or discharge potential of an ion .....	$E$	$e$
Electrode potential referred to the normal hydrogen or normal calomel electrode respectively, the potential of which is taken as zero .....	$E_h, E_c$	$e_h, e_c$
Normal potential, i.e., the electrode potential referred to the normal hydrogen or normal calomel electrode respectively, when the solution is molecular-normal in respect of all participating substances and ions of variable concentration .....	${}_0E_h, {}_0E_c$	${}_0e_h, {}_0e_c$
Dielectric constant .....	$\epsilon$	
Conductivity (specific conductance) .....	$\kappa$	
Equivalent conductivity .....	$\Lambda$	
Equivalent conductivity at different dilutions—volumes in litres containing 1 gram-equivalent .....	$\Lambda_{100}, \Lambda_v, \Delta_{\infty}$	

6. *Electricity and Magnetism*—(continued).

	Usual symbol.	Alternative symbol.
Equivalent conductivity of kation and of anion .....	$\Lambda_k, \Lambda_a$	
Equivalent conductivity of specified ions...	$\Lambda_K, \Lambda_{Cl}$	
Molecular conductivity .....	$\mu$	
Velocity of kation and of anion in cm./sec. when the potential gradient is 1 volt per cm. ....	$U_k, U_a$	
Transport number of kation and of anion ...	$n_k, n_a$	
Magnetic permeability .....	$\mu$	
Magnetic susceptibility .....	$\kappa$	

*List of Symbols, Arranged Alphabetically.*

Symbol.	Name of quantity.
$A$	Atomic weight; maximum work.
$a$	Van der Waals's constant.
$b$	Van der Waals's constant.
$C$	Concentration; molecular heat.
$c$	Concentration; specific heat.
$C_p, C_v$	Molecular heat at constant pressure, and at constant volume.
$c_p, c_v$	Specific heat at constant pressure, and at constant volume.
$D$	Alternative symbol for density.
$d$	Diameter; total differential; density.
$d_c$	Critical density.
$d$	Reduced density.
$E$	Electromotive force; electrode potential.
$e$	Base of Napierian logarithms; charge on an electron.
$E_h, E_c$	Electrode potential referred to the normal hydrogen or the normal calomel electrode, respectively, the potential of which is taken as zero.
${}_0E_h, {}_0E_c$	Normal potential, that is, the electrode potential referred to the normal hydrogen or the normal calomel electrode respectively, when the solution is molecular-normal in respect of all participating substances and ions of variable concentration.
$F$	Faraday's constant (number of coulombs per gram-equivalent of an ion).
$g$	Acceleration due to gravity.
$h$	Height.
$I$	Current.
$i$	Van't Hoff's coefficient.
$J$	Mechanical equivalent of heat.
$K$	Equilibrium constant.
$K_c, K_p$	Equilibrium constant, when molar concentrations and partial pressures respectively are employed.
$k$	Velocity coefficient of reaction.
$L$	Latent heat per mole.
$l$	Length; latent heat per gram.
$M$	Molecular weight.
$M[\alpha]$	Molecular rotatory power.
$M[\omega]$	Molecular magnetic rotatory power.
$m$	Mass.
$N$	Avogadro's constant (Loschmidt's number) or number of molecules in 1 gram-molecule.
$n$	Refractive index.

*List of Symbols, Arranged Alphabetically—(continued).*

Symbol.	Name of quantity.
$n_k, n_a$	Transport number of kation and of anion.
$n_r$	Refractive index (alternative symbol).
$P$	Pressure.
$p$	Pressure.
$p_c, p_r$	Critical pressure : reduced pressure.
$Q$	Quantity of heat; quantity of electricity.
$R$	Gas constant per mole; electrical resistance.
$R_G, R_L$	Molecular refractive power, according to Gladstone and Dale, and to Lorentz and Lorenz respectively.
$r$	Radius.
$r_G, r_L$	Specific refractive power according to Gladstone and Dale, and to Lorentz and Lorenz respectively.
$S$	Entropy.
$T$	Absolute temperature.
$T_c$	Critical temperature (on the absolute scale).
$T_r$	Reduced temperature (absolute).
$T_{cs}$	Critical solution temperature (absolute).
$t$	Time; temperature (centigrade).
$t_c$	Critical temperature (centigrade).
$t_{cs}$	Critical solution temperature (centigrade).
$t_r$	Reduced temperature (centigrade).
$U_k, U_a$	Velocity of kation and of anion in cm./sec. when the potential gradient is 1 volt per cm.
$V$	Volume.
$v$	Volume.
$v_c, v_r$	Critical volume : reduced volume.
$W$	Electrical resistance (alternative symbol).
$x$	Mole fraction.
$\alpha$	Degree of dissociation (electrolytic, thermal, etc.); angle of optical rotation.
$[\alpha]$	Specific rotatory power.
$\gamma$	Surface tension; ratio of specific heats.
$\Delta$	Diffusion coefficient.
$\delta$	Variation.
$\partial$	Partial differential.
$\epsilon$	Electrode potential (alternative symbol); dielectric constant.
$\epsilon_h, \epsilon$	Electrode potential referred to the normal hydrogen or the normal calomel electrode respectively, the potential of which is taken as zero (alternative symbols).
$0\epsilon_h, 0\epsilon$	Normal potential, that is, the electrode potential referred to the normal hydrogen or the normal calomel electrode respectively, when the solution is molecular-normal in respect of all participating substances and ions of variable concentration (alternative symbols).
$\eta$	Viscosity.
$\theta$	Temperature (centigrade), (alternative symbol).
$\kappa$	Specific conductance (conductivity); magnetic susceptibility.
$\Lambda$	Equivalent conductivity.
$\Lambda_{10}, \Lambda_v, \Lambda_{\infty}$	Equivalent conductivity at different dilutions (volumes in litres containing 1 gram-equivalent).
$\Lambda_k, \Lambda_a$	Equivalent conductivity of kation and of anion.
$\lambda$	Wave-length of light.
$\mu$	Molecular conductivity; magnetic permeability.
$\pi$	Ratio of circumference to diameter.
$\Sigma$	Summation.
$\sigma$	Surface tension (alternative symbol).
$\phi$	Fluidity.
$[\omega]$	Specific magnetic rotation.

## JOURNALS FROM WHICH ABSTRACTS ARE MADE.

The following is a list of Journals from which abstracts are made (directly or indirectly) by the Bureau of Chemical Abstracts.

ABBREVIATED TITLE.	JOURNAL.
Abh. Böhm. Akad. . . . .	Abhandlungen der Böhmischen Akademie.
Abh. Deut. Naturwiss. Med. Ver. Böhmen	Abhandlungen der Deutschen Naturwissenschaftlichen und Medizinischen Verein, Böhmen.
Acta Phytchim. . . . .	Acta Phytchimica.
Acta. Sci. Fennicae . . . .	Acta Societatis Scientiarum Fennicae.
Agric. Bull. F. M. S. . . .	Agricultural Bulletin of the Federated Malay States.
Agric. J. India . . . . .	Agricultural Journal of India.
Agric. Res. Inst., Pusa, Rep. (Bull.)	Agricultural Research Institute, Pusa, Report and Bulletins.
Allgem. Z. Bierbrau. . . .	Allgemeine Zeitschrift für Bierbrauerei und Malzfabrikation.
Amer. J. Bot. . . . .	American Journal of Botany.
Amer. J. Dis. Children . . .	American Journal of Diseases of Children.
Amer. J. Pharm. . . . .	American Journal of Pharmacy.
Amer. J. Physiol. . . . .	American Journal of Physiology.
Amer. J. Publ. Health . . .	American Journal of Public Health.
Amer. J. Sci. . . . .	American Journal of Science.
Amer. Min. . . . .	American Mineralogist.
Anal. Asoc. Quím. Argentina	Anales de la Asociación Química Argentina.
Anal. Fís. Quím. . . . .	Anales de la Sociedad Española de Física y Química.
Analyst . . . . .	Analyst.
Annalen . . . . .	Justus Liebig's Annalen der Chemie.
Ann. Bot. . . . .	Annals of Botany.
Ann. di Bot. . . . .	Annali di Botanica.
Ann. Chim. . . . .	Annales de Chimie.
Ann. Chim. Analyt. . . . .	Annales de Chimie Analytique et de Chimie Appliquée.
Annali Chim. Appl. . . . .	Annali di Chimica Applicata.
Ann. Falsif. . . . .	Annales des Falsifications.
Ann. hyg. pub. méd. légale	Annales d'hygiène publique et de médecine légale.
Ann. Inst. Pasteur . . . .	Annales de l'Institut Pasteur.
Ann. Physik . . . . .	Annalen der Physik.
Ann. Physique . . . . .	Annales de Physique.
Ann. R. Staz. Chim. Agrar. Sperim.	Annali della R. Stazione Chimico Agraria Sperimentale di Roma.
Ann. sci. Univ. Jassy . . .	Annales scientifiques de l'Université de Jassy.
Ann. Soc. Geol. Congo . . .	Annales de la Société géologique de Belgique: Publications relatives au Congo Belge.
Apoth.-Ztg. . . . .	Apotheker-Zeitung.
Arb. Gebiet. Physik, Math., Chem.	Arbeiten aus dem Gebiete der Physik, Mathematik und Chemie.
Arch. Entw.-mech. Org. . .	Archiv für Entwicklungsmechanik der Organismen.
Arch. exp. Path. Pharm. . .	Archiv für experimentelle Pathologie und Pharmakologie.
Arch. Farm. speriment. Sci. aff.	Archivio di Farmacologia sperimentale e Scienze affini.
Arch. Fisiol. . . . .	Archivio di Fisiologia.
Arch. Int. Med. . . . .	The Archives of Internal Medicine.
Arch. ital. Biol. . . . .	Archives italiennes de Biologie.

ABBREVIATED TITLE.	JOURNAL.
Arch. Med. Pharm. milit.	Archives de Médecine et de Pharmacie militaires.
Arch. Néerland.	Archives Néerlandaises de sciences exactes et naturelles.
Arch. Néerland. physiol.	Archives Néerlandaises de physiologie de l'homme et des animaux.
Arch. Pharm.	Archiv der Pharmazie.
Arch. Sci. phys. nat.	Archives des Sciences physiques et naturelles.
Arch. Suikerind. Ned.-Indië	Archief voor de Suikerindustrie in Nederlandsch-Indië.
Arkiv Kemi, Min., Geol.	Arkiv för Kemi, Mineralogi och Geologi.
Astrophys. J.	Astrophysical Journal.
Atti R. Accad. Lincei	Atti della Reale Accademia Nazionale dei Lincei.
Atti R. Accad. Sci. Torino	Atti della Reale Accademia delle Scienze di Torino.
Atti R. Ist. Veneto Sci.	Atti del Reale Istituto Veneto di Scienze, Lettere ed Arti.
Beitr. Min. Japan	Beiträge zur Mineralogie von Japan.
Berg-Hüttenm. Rundsch.	Berg- und Hüttenmannisches Rundschau.
Ber.	Berichte der Deutschen chemischen Gesellschaft.
Ber. Deut. bot. Ges.	Berichte der Deutschen botanischen Gesellschaft.
Ber. Deut. pharm. Ges.	Berichte der Deutschen pharmazeutischen Gesellschaft.
Ber. Oberhess. Ges. Natur. Heilkunde	Berichte der Oberhessischen Gesellschaft für Natur- und Heilkunde zu Giessen.
Ber. Ohara Inst. landw. Forsch.	Berichte des Ohara Instituts für landwirtschaftliche Forschungen.
Ber. Sächs. Akad. Wiss.	Berichte über die Verhandlungen der Sächsischen Akademie der Wissenschaften zu Leipzig.
Berlin. Klin. Woch.	Berliner Klinische Wochenschrift.
Bied. Zentr.	Biedermann's Zentralblatt.
Biochem. J.	Biochemical Journal.
Biochem. Z.	Biochemische Zeitschrift.
Bol. Acad. Nac. Ciencias, Cordoba	Boletín de la Academia Nacional des Ciencias, Cordoba.
Boll. Chim. farm.	Bolletino Chimico farmaceutico.
Boll. Soc. Geol. Ital.	Bolletino della Società Geologica Italiana.
Boll. Soc. Med.-Chirurg.	Bolletino della Società Medico-Chirurgica, Pavia.
Bot. Centr.	Botanisches Centralblatt.
Bot. Gaz.	Botanical Gazette.
Brass. Malt.	Brasserie et Malterie.
Brau- u. Malzind.	Brau- u. Malzindustrie.
Braunkohle	Braunkohle.
Brennstoff-Chem.	Brennstoff-Chemie.
Brewers' J.	Brewers' Journal.
Brit. J. Phot.	British Journal of Photography.
Brit. Med. J.	British Medical Journal.
Buletinul Chim.	Buletinul Chimie.
Bul. Soc. Chim. România	Buletinul Societății de Chimie din România.
Bul. Soc. Romane Stiin.	Buletinul Societății Romane de Științe.
Bull. Acad. roy. Belg.	Académie royale de Belgique—Bulletin de la Classe des Sciences.
Bull. Acad. Sci. Roumaine	Bulletin de la Section Scientifique de l'Académie Roumaine.
Bull. Assoc. Chim. Sucr.	Bulletin de l'Association des Chimistes de Sucrerie et de Distillerie.
Bull. Bureau of Standards	Bulletin of the Bureau of Standards (U.S.A.).
Bull. Com. Géol. Finlande	Bulletin de la Commission Géologique de Finlande.
Bull. Forest Exp. Stat. Meguro	Bulletin of the Forest Experiment Station, Meguro, Tokyo.
Bull. gén. Thérap.	Bulletin général de Thérapeutique médicale, chirurgicale, obstétricale.

ABBREVIATED TITLE.	JOURNAL.
Bull. Geol. d'Alsace . . .	Bulletin du Service de la Carte Geologique d'Alsace et de Lorraine.
Bull. Geol. Inst. Univ. Upsala	Bulletin of the Geological Institution of the University of Upsala.
Bull. Geol. Soc. Amer. . .	Bulletin of the Geological Society of America.
Bull. Geol. Survey, U.S.A.	Bulletin of the U.S. Geological Survey.
Bull. Geol. Survey, West Australia	Bulletin of the Geological Survey, West Australia.
Bull. Imp. Inst. . . .	Bulletin of the Imperial Institute.
Bull. Indian Ind. Lab. . .	Bulletin of Indian Industries and Labour.
Bull. Inst. Phys. Chem. Res., Japan.	Bulletin of the Institute of Physical and Chemical Research, Japan (Rikwagaku Kerkyujo Ihô).
Bull. Johns Hopkins Hospital	Bulletin of the Johns Hopkins Hospital.
Bull. School Mines and Met., Univ. Missouri . .	Bulletin of the School of Mines and Metallurgy, University of Missouri.
Bull. Sci. Pharmacol. . .	Bulletin des Sciences Pharmacologiques.
Bull. Soc. chim. . . .	Bulletin de la Société chimique de France.
Bull. Soc. chim. Belg. . .	Bulletin de la Société chimique de Belgique.
Bull. Soc. Chim. biol. . .	Bulletin de la Société de Chimie biologique.
Bull. Soc. d'Encour. . . .	Bulletin de la Société d'Encouragement pour l'Industrie Nationale.
Bull. Soc. franç. Min. . .	Bulletin de la Société française de Minéralogie.
Bull. Soc. Franç. Phot. . .	Bulletin de la Société Française de Photographie.
Bull. Soc. Géol. Belg. . .	Bulletin de la Société Géologique de Belgique.
Bull. Soc. Ind. Mulhouse .	Bulletin de la Société Industrielle de Mulhouse.
Bull. Soc. Ind. Nord . . .	Bulletin de la Société Industrielle du Nord de la France.
Bull. Soc. Oural. Sci. Nat.	Bulletin de la Société Ouralienne des Amateurs des Sciences Naturelles à Catherineberg.
Bull. Soc. Pharm. Bordeaux	Bulletin des Travaux de la Société de Pharmacie de Bordeaux.
Bull. Wellcome Trop. Res. Lab.	Bulletin of the Wellcome Tropical Research Laboratory.
Cairo Sci. J. . . . .	Cairo Scientific Journal.
Canada Dept. Mines Publ. .	Canada Department of Mines Publications.
Canadian Chem. Met. . . .	Canadian Chemistry and Metallurgy.
Canadian Med. Assoc. J. . .	Canadian Medical Association Journal.
Caoutchouc et Gutta-Percha	Le Caoutchouc et le Gutta-Percha.
Casopis Math. Fysiky . . .	Časopis pro pěstování Matematiky a Fysiky.
Cellulosechem. . . . .	Cellulosechemie.
Centr. Min. . . . .	Centralblatt für Mineralogie, Geologie und Paläontologie.
Chem. App. . . . .	Chemische Apparatur.
Chem. Erde . . . . .	Chemie der Erde.
Chem. and Ind. . . . .	Chemistry and Industry.
Chem. Ind. . . . .	Chemische Industrie.
Chem. Listy . . . . .	Chemické Listy pro Vědu a Průmysl. Organ de la "Česká chemická Společnost pro Vědu a Průmysl."
Chem. and Met. Eng. . . .	Chemical and Metallurgical Engineering.
Chem. News . . . . .	Chemical News.
Chem. Trade J. . . . .	Chemical Trade Journal.
Chem. Umschau . . . . .	Chemische Umschau auf dem Gebiete der Fette, Öle, Wachse, und Harze.
Chem. Weekblad. . . . .	Chemisch Weekblad.
Chem.-Ztg. . . . .	Chemiker-Zeitung.
Chem. Zentr. . . . .	Chemisches Zentralblatt.
Chim. et Ind. . . . .	Chimie et Industrie.
Collegium . . . . .	Collegium.

ABBREVIATED TITLE.	JOURNAL.
Compt. rend. . . . .	Comptes rendus hebdomadaires des Séances de l'Académie des Sciences.
Compt. rend. Soc. Biol. . . . .	Comptes rendus hebdomadaires de Séances de la Société de Biologie.
Compt. rend. Trav. Lab. Carlsberg . . . . .	Comptes rendus des Travaux du Laboratoire Carlsberg.
Dept. Chem. S. Australia, Bull. . . . .	Department of Chemistry, South Australia, Bulletins.
Deut. med. Woch. . . . .	Deutsche medizinische Wochenschrift.
E.P. . . . .	English Patent.
Econ. Geol. . . . .	Economic Geology.
Econ. Proc. Roy. Dubl. Soc. . . . .	Economic Proceedings of the Royal Dublin Society.
Engineering . . . . .	Engineering.
Eng. and Min. J. . . . .	Engineering and Mining Journal.
Exper. Stat. Rec. . . . .	Experiment Station Record.
F.P. . . . .	French Patent.
Farben-Ztg. . . . .	Farben-Zeitung.
Fermentforsch. . . . .	Fermentforschung.
Feuerungstechnik . . . . .	Feuerungstechnik.
Flora . . . . .	Flora.
Földtani Közlöny . . . . .	Földtani Közlöny.
G.P. . . . .	German Patent.
Gas J. . . . .	Gas Journal.
Gas- u. Wasserfach . . . . .	Gas- und Wasserfach.
Gas World . . . . .	Gas World.
Gazzetta . . . . .	Gazzetta chimica italiana.
Geol. För. Förh. . . . .	Geologiska Föreningens i Stockholm Förhandlingar.
Geol. Mag. . . . .	Geological Magazine.
Gerber . . . . .	Gerber.
Giorn. Chim. Ind. Appl. . . . .	Giornale di Chimica Industriale ed Applicata.
Gummi-Ztg. . . . .	Gummi-Zeitung.
Handl. Vijft. Nat. . . . .	Handelingen van het Vijftende Natuur.
Hawaii Agric. Exp. Stat. Bull. . . . .	Hawaii Agricultural Experiment Station Bulletins.
Heart . . . . .	Heart.
Helv. Chim. Acta . . . . .	Helvetica Chimica Acta.
Indian J. Med. Res. . . . .	Indian Journal of Medical Research.
India-rubber J. . . . .	India-rubber Journal.
Ind. Eng. Chem. . . . .	Industrial and Engineering Chemistry.
Int. Rev. Sci. Pract. Agric. . . . .	International Review of the Science and Practice of Agriculture.
Int. Sugar J. . . . .	International Sugar Journal.
Iron Steel Inst. Carnegie Schol. Mem. . . . .	Iron and Steel Institute, Carnegie Scholarship Memoirs.
J.C.S. . . . .	Journal of the Chemical Society.
Jahrb. geol. Reichsanst. . . . .	Jahrbuch der geologischen Reichsanstalt.
Jahrb. Min. . . . .	Neues Jahrbuch für Mineralogie, Geologie und Paläontologie.
Jahrb. Min. Beil.-Bd. . . . .	Neues Jahrbuch für Mineralogie, Geologie und Paläontologie, Beilage-Band.
Jahrb. Radioaktiv. . . . .	Jahrbuch der Radioaktivität und Elektronik.
Jahrb. wiss. Bot. . . . .	Jahrbuch für wissenschaftliche Botanik.
Jahresber. Ges. vaterl. Kultur . . . . .	Jahresbericht der schlesischen Gesellschaft für vaterländische Kultur.
Japan. J. Med. Sci. . . . .	Japanese Journal of Medical Sciences.
Japan. J. Phys. . . . .	Japanese Journal of Physics.
Jernk. Ann. . . . .	Jernkontorets Annaler.
J. Agric. Res. . . . .	Journal of Agricultural Research.
J. Agric. Sci. . . . .	Journal of Agricultural Science.
J. Amer. Ceram. Soc. . . . .	Journal of the American Ceramic Society.

ABBREVIATED TITLE.	JOURNAL.
J. Amer. Chem. Soc.	Journal of the American Chemical Society.
J. Amer. Leather Chem. Assoc.	Journal of the American Leather Chemists' Association.
J. Amer. Med. Assoc.	Journal of the American Medical Association.
J. Assoc. Off. Agric. Chem.	Journal of the Association of Official Agricultural Chemists.
J. Biol. Chem.	Journal of Biological Chemistry.
J. Canad. Min. Inst.	Journal of the Canadian Mining Institute.
J. Chem. Ind. Tokyo	See Kōgyō-Kwagaku-Zasshi.
J. Chem. Met. Soc. S. Africa	Journal of the Chemical, Metallurgical, and Mining Society of South Africa.
J. Chem. Soc. Japan.	Journal of the Chemical Society of Japan. (Nippon Kwagaku Kwai Shi.)
J. Chim. phys.	Journal de Chimie physique.
J. Coll. Agric. Hokkaido	Journal of the College of Agriculture, Hokkaido Imperial University, Japan.
J. Coll. Agric. Tokyo	Journal of the College of Agriculture, Imperial University of Tokyo, Japan.
J. Coll. Eng. Tokyo	Journal of the College of Engineering, Imperial University of Tokyo.
J. Coll. Sci. Tokyo	Journal of the College of Science, Imperial University of Tokyo.
J. Exp. Med.	Journal of Experimental Medicine.
J. Franklin Inst.	Journal of the Franklin Institute.
J. Gen. Physiol.	Journal of General Physiology.
J. Genetics	Journal of Genetics.
J. Geol.	Journal of Geology.
J. Geol. Soc. Tokyo	Chishitsugaku Zasshi (Journal of the Geological Society of Tokyo).
J. Hygiene	Journal of Hygiene.
J. Indian Chem. Soc.	Quarterly Journal of the Indian Chemical Society.
J. Indian Ind. Lab.	Journal of Indian Industries and Labour.
J. Indian Inst. Sci.	Journal of the Indian Institute of Science.
J. Ind. Hygiene	Journal of Industrial Hygiene.
J. Inst. Brewing	Journal of the Institute of Brewing.
J. Inst. Metals	Journal of the Institute of Metals.
J. Inst. Petroleum Tech.	Journal of the Institution of Petroleum Technologists.
J. Iron and Steel Inst.	Journal of the Iron and Steel Institute.
J. Jap. Ceram. Assoc.	Journal of the Japanese Ceramic Association.
J. Landw.	Journal für Landwirtschaft.
J. Marine Biol. Assoc.	Journal of the Marine Biological Association of the United Kingdom.
J. Med. Res.	Journal of Medical Research.
J. Min. Agric.	Journal of the Ministry of Agriculture.
J. Path. Bact.	Journal of Pathology and Bacteriology.
J. Opt. Soc. Amer.	Journal of the Optical Society of America.
J. Pharm. Chim.	Journal de Pharmacie et de Chimie.
J. Pharm. Exp. Ther.	Journal of Pharmacology and Experimental Therapeutics.
J. Pharm. Soc. Japan	Journal of the Pharmaceutical Society of Japan (Yakugakuzasshi).
J. Physical Chem.	Journal of Physical Chemistry.
J. Physiol.	Journal of Physiology.
J. Physiol. Path. gén.	Journal de Physiologie et de Pathologie générale.
J. Phys. Radium	Journal de Physique et le Radium.
J. pr. Chem.	Journal für praktische Chemie.
J. Proc. Asiatic Soc. Bengal.	Journal and Proceedings of the Asiatic Society of Bengal.
J. Proc. Roy. Soc. New South Wales	Journal and Proceedings of the Royal Society of New South Wales.

ABBREVIATED TITLE.	JOURNAL.
J. Roy. Agric. Soc. . . .	Journal of the Royal Agricultural Society.
J. Roy. Army Med. Corps . .	Journal of the Royal Army Medical Corps.
J. Roy. Hort. Soc. . . .	Journal of the Royal Horticultural Society.
J. Roy. Soc. West Australia	Journal of the Royal Society of West Australia.
J. Russ. Phys. Chem. Soc.	Journal of the Physical and Chemical Society of Russia.
J. Scot. Met. Soc. . . .	Journal of the Scottish Meteorological Society.
J. Soc. Arts . . . .	Journal of the Royal Society of Arts.
J.S.C.I. . . . .	Journal of the Society of Chemical Industry.
J. Soc. Dyers and Col. . .	Journal of the Society of Dyers and Colourists.
J. Soc. Leather Trades Chem.	Journal of the Society of Leather Trades Chemists.
J. Soc. Glass Tech. . . .	Journal of the Society of Glass Technology.
J. S. African Chem. Inst. .	Journal of the South African Chemical Institute.
J. Textile Inst. . . .	Journal of the Textile Institute.
J. Usines Gaz . . . .	Journal des Usines à Gaz.
J. Washington Acad. Sci. .	Journal of the Washington Academy of Science.
J. West Scotland Iron Steel Inst.	Journal of the West of Scotland Iron and Steel Institute.
K. Svenska Vet. Akad. Handl.	Kongliga Svenska Vetenskaps Akademiens Hand- lingar.
Kentucky Exp. Stat. Bull.	Kentucky Experimental Station, Bulletin.
Keram. Rundsch. . . .	Keramisch Rundschau.
Kew Bull. . . . .	Kew Bulletin.
Kōgyō-Kwagaku-Zasshi . .	Kōgyō-Kwagaku-Zasshi (Journal of Chemical Industry, Japan).
Kolloid Z. . . . .	Kolloid Zeitschrift.
Koll.-Chem. Beih. . . .	Kolloid-chemische Beihefte.
Kosmos . . . . .	Kosmos (Lemberg).
Kühn-Archiv . . . .	Kühn-Archiv.
Kunststoffe . . . .	Kunststoffe.
Lancet . . . . .	The Lancet.
Landw. Jahrb. . . . .	Landwirtschaftliche Jahrbücher.
Landw. Versuchs.-Stat.	Die landwirtschaftlichen Versuchs-Stationen.
Louisiana Bull. . . .	Louisiana Bulletin.
Louisiana Planter . . .	Louisiana Planter.
Lunds Univ. Årsskr. . .	Lunds Universitets Års-skrift.
Math. és Termés. Ert.	Mathematikai és Természettudományi Ertesítő, Buda- pest.
Medd. K. Vetenskapsakad. Nobel-Inst.	Meddelanden från Kongl. Vetenskapsakademiens Nobel- Institut.
Medd. on Grönland . . .	Meddelser on Grönland.
Med. Genees. Lab. Weltevreden	Mededeelingen uit het Geneeskundig Laboratorium te Weltevreden.
Med. Chron. . . . .	Medical Chronicle.
Med. Klinik . . . .	Medizinische Klinik.
Mem. Accad. Lincei . .	Memorie della Reale Accademia dei Lincei.
Mem. Accad. Sci. Torino .	Memorie della Reale Accademia delle Scienze di Torino.
Mem. Coll. Sci. Kyōtō . .	Memoirs of the College of Science, Kyōtō Imperial University.
Mem. Coll. Sci. and Eng. Kyōtō	Memoirs of the College of Science and Engineering, Kyōtō Imperial University.
Mem. Dept. Agric. India .	Memoirs of the Department of Agriculture in India.
Mem. Manchester Phil. Soc.	Memoirs and Proceedings of the Manchester Literary and Philosophical Society.
Mem. Soc. Ing. Civ. . .	Mémoires de la Société des Ingénieurs Civils de France.
Mem. Soc. Toscana Sci. Nat.	Memorie della Società Toscana di Scienze naturali residente in Pisa.
Mém. Poudres . . . .	Mémorial des Poudres.
Metall u. Erz . . . .	Metall und Erz.
Metallurgie . . . .	Metallurgie.

ABBREVIATED TITLE.	JOURNAL.
Metrop. Water Bd. Rep. . . . .	Metropolitan Water Board Reports.
Milch. Zentr. . . . .	Milchwirtschaftliches Zentralblatt.
Min. Mag. . . . .	Mineralogical Magazine and Journal of the Mineralogical Society.
Mitt. Materialprüf. . . . .	Mittheilungen aus dem Materialprüfungsamt zu Gross-Lichterfelde West.
Mitt. med. Ges. Tokyo . . . . .	Mittheilungen der medizinischen Gesellschaft zu Tokyo.
Mitt. Naturforsch. Ges. Halle . . . . .	Mittheilungen der Naturforschenden Gesellschaft zu Halle.
Mitt. Path. Inst. K. Univ. Japan . . . . .	Mittheilungen aus dem pathologischen Institut der Kaiserlichen Universität zu Sendai, Japan.
Monatsh. . . . .	Monatshefte für Chemie und verwandte Teile anderer Wissenschaften.
Monatsh. Math. Physik . . . . .	Monatshefte für Mathematik und Physik.
Mon. Sci. . . . .	Moniteur Scientifique.
Month. Not. Roy. Astr. Soc. . . . .	Monthly Notices of the Royal Astronomical Society, London.
Münch. med. Woch. . . . .	Münchener medizinische Wochenschrift.
Nachr. Ges. Wiss. Göttingen . . . . .	Nachrichten von der Gesellschaft der Wissenschaften zu Göttingen.
Nature . . . . .	Nature.
Naturwiss. . . . .	Die Naturwissenschaften.
Naturw. Rdsch. . . . .	Naturwissenschaftliche Rundschau.
New York Agr. Expt. Sta. Bull. . . . .	New York Agricultural Experiment Station Bulletins.
New Zealand Dominion Laby. Rept. . . . .	New Zealand Dominion Laboratory Reports.
New Zealand J. Sci. Tech. . . . .	New Zealand Journal of Science and Technology.
Nippon Kwagaku Kwai Shi (J. Chem. Soc. Japan). . . . .	Nippon Kwagaku Kwa Shi (Journal of the Chemical Society of Japan).
Nova Acta Soc. Sci. . . . .	Nova Acta Regiae Societatis Scientiarum Upsaliensis.
Nuovo Cim. . . . .	Il Nuovo Cimento.
Öfvers. Finska Vet.-Soc. . . . .	Öfversigt af Finska Vetenskaps-Societätens Förhandlingar, Helsingfors.
Oesterr. Chem.-Ztg. . . . .	Oesterreichische Chemiker-Zeitung.
Oversigt Danske Vid. Selsk. . . . .	Oversigt over det Kongelige Danske Videnskabernes Selskabs Forhandlingar.
Paper . . . . .	Paper.
Papierfabr. . . . .	Papier-Fabrikant.
Perf. and Essent. Oil Rec. . . . .	Perfumery and Essential Oil Record.
Per. spis. Sofia . . . . .	Periodicesko spisanie Sofia.
Petroleum . . . . .	Petroleum (German).
Pflüger's Archiv. . . . .	Archiv für die gesamte Physiologie des Menschen und der Thiere.
Pharm. J. . . . .	Pharmaceutical Journal.
Pharm. Weekblad . . . . .	Pharmaceutisch Weekblad.
Pharm. Zentr. . . . .	Pharmazeutische Zentralhalle.
Philippine J. Sci. . . . .	Philippine Journal of Science.
Phil. Mag. . . . .	Philosophical Magazine (The London, Edinburgh and Dublin).
Phil. Trans. . . . .	Philosophical Transactions of the Royal Society of London.

# PROCEEDINGS

## OF THE

# CHEMICAL SOCIETY.

Ordinary Scientific Meeting, Thursday, January 15th, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of the following Fellows :

	Elected.	Died.
Robert P. Douglas .....	May 2nd, 1912.	Nov. 24th, 1924.
Khasberao B. Jadhava .....	June 16th, 1887.	Oct. 6th, 1924.
Edmund G. Lamb .....	May 4th, 1893.	Jan. 3rd, 1925.
George Downing Liveing .....	Nov. 21st, 1853.	Dec. 26th, 1924.
James McAlley .....	June 15th, 1899.	Feb. 1924.
William Sharman .....	June 4th, 1874.	Dec. 21st, 1924.

The PRESIDENT announced :

(1) That the names of the Members of Council who retire at the Annual General Meeting on the 26th March, 1925, and who are ineligible for re-election to the same office until the lapse of one year, are as follows :

President :

Prof. W. P. Wynne.

Foreign Secretary :

Dr. A. W. Crossley.

Vice-Presidents who have filled the office of President :

Prof. H. B. Dixon, Prof. P. F. Frankland.

Vice-Presidents who have not filled the office of President :

Prof. E. C. C. Baly, Dr. J. T. Hewitt.

Ordinary Members of Council :

(a) Town Members :

Dr. C. Dorée, Dr. J. J. Fox, Prof. J. R. Partington.

(b) Country Members :

Prof. I. M. Heilbron, Prof. J. W. McBain, Dr. W. H. Mills.

The following vacant places fall due to be filled at the Annual General Meeting on March 26th, 1925, in accordance with the Bye-Laws :

President	...	...	...	...	...	One vacancy.
Secretaries	...	...	...	...	...	One vacancy.
Foreign Secretary	...	...	...	...	...	One vacancy.
Vice-Presidents who have filled the office of						

President	...	...	...	...	...	Three vacancies.
-----------	-----	-----	-----	-----	-----	------------------

(Note: the vacancy additional to the two prescribed by the Bye-Laws is caused by the death of Sir James Dobbie.)

Vice-Presidents who have not filled the office of President						...	...	...	...	...	Two vacancies.
---	--	--	--	--	--	-----	-----	-----	-----	-----	----------------

Ordinary Members of Council :

- |  |                 |
|--|-----------------|
| (a) Town Members ( <i>i.e.</i> , those living within a radius of 50 miles from Charing Cross)    | Five vacancies. |
| (b) Country Members ( <i>i.e.</i> , those living beyond a radius of 50 miles from Charing Cross) | ...             |
| ...  | ...             |
| ...  | Two vacancies.  |

(Note: In accordance with the Bye-Laws, the number of vacancies in each of the categories (a) and (b) is three. But this year the vacancies among Town Members are increased by two and among Country Members reduced by two, owing to Prof. C. K. Ingold and Prof. J. Reilly, who are no longer resident in the London area, being transferred from Town to Country Members; while the resignation of a Country Member increases the number of vacancies among Country Members from one to two.

The Council has nominated :

Dr. A. W. Crossley to the office of President.

Dr. T. Slater Price to the office of Secretary.

Prof. F. G. Donnan to the office of Foreign Secretary.

(2) That the following address of congratulation was presented by Sir William Pope, F.R.S., to the Société Chimique de France on December 22nd, 1924, on the occasion of the celebrations of the 50th Anniversary of the foundation of Stereochemistry by van't Hoff and Le Bel in 1874 :

"To the Société Chimique de France.

"The President, Council and Fellows of the Chemical Society rejoice to learn that the Société Chimique de France is meeting on December 22nd on the occasion of the 50th anniversary of the foundation of Stereochemistry by Joseph Achille Le Bel and Jacobus Henricus van't Hoff.

"These two savants will ever be remembered for one of the most important advances in modern chemical thought and practice. The masterly conception which they gave to the chemical world has proved a fruitful incentive to brilliant researches, which have not only confirmed their theoretical reasoning, but have also immeasurably widened our knowledge of chemical structure.

"The Chemical Society, which is proud to have the name of Joseph Achille Le Bel on its list of Foreign Fellows, welcomes the opportunity of joining with its sister Society in doing honour to Le Bel and van't Hoff and in paying homage to their genius.

"Signed on behalf of the Chemical Society,

W. P. WYNNE, *President*.

JOCELYN THORPE, *Treasurer*.

T. SLATER PRICE, } *Secretaries*.

C. S. GIBSON, }

ARTHUR W. CROSSLEY, *Foreign Secretary*.

(L.S.)

"Sealed in Council this Eighteenth day of December, One Thousand Nine Hundred and Twenty-four."

The following were formally admitted Fellows of the Chemical Society: H. J. George, E. Rothstein, R. F. Goldstein, S. Barratt, E. Roberts, J. A. Aeschlimann, J. Ross, and C. I. Kelly.

Certificates were read for the first time in favour of:

Claud McClellan Bottomley, B.Sc., 43, Manor Road, Blackburn.

Frederick Stanley Brown, B.Sc., A.I.C., Rosebank, Tile Hill Lane, Coventry.

Herbert Isaac Coombs, B.Sc., B.A., Trinity College, Cambridge.

Ernest James Davis, 45, McClure Street, Ormeau Road, Belfast.

Henry Bell Footner, B.Sc., Great Dean, nr. Christchurch, Hants.

Robert Owen Griffith, M.Sc., A.I.C., Muspratt Laboratory of Physical Chemistry, The University, Liverpool.

Herbert Henry Hodgson, M.A., Ph.D., B.Sc., F.I.C., 130, Paley Road, Bradford.

Wilford Jordayne Johnson, Devanha, South Road, Brighton Beach, Victoria, Australia.

William Wenallt Jones, M.Sc., 19, White Hart Lane, Wood Green, N. 22.

Jacob Kracovski, B.Sc., 11, Ernest Street, E. 1.

John Joseph Laws, 45, Fulham Road, South Kensington, S.W. 7.

Alexander John Simpson Leiper, 74, Whitworth Road, South Norwood, S.E. 25.

William Hamilton McVicker, M.Sc., 45, Wellington Park, Belfast.

Frank Douglas Miles, Caldwell Road, West Kilbride, Ayrshire.

William Bayley Parker, F.I.C., 3, Murray Road, Rugby.

Isaac Vogel, B.Sc., 16, Wellclose Square, E. 1.

Nellie Walker, M.A., Ph.D., B.Sc., 15, Fintory Place, Broughty Ferry.

James Ewart Whipp, 15, St. John's Street, Longsight, Manchester.

The following papers were read:

"6-Chlorophenoxarsine." By E. E. TURNER and A. B. SHEPPARD.

- "The chemistry of the three-carbon system. Part III.  $\alpha\beta\gamma$ -Change in unsaturated acids." By G. A. R. KON and R. P. LINSTEAD.
- "The influence of valency direction on the dissociation constants of dibasic acids." By C. H. SPIERS and J. F. THORPE.
- "The relation of pilocarpidine to pilocarpine. Synthesis of 1:4- and 1:5-dimethylglyoxalines." By R. BURTLES, F. L. PYMAN, and J. ROYLANCE.

### LECTURE.

Sir William Hardy, Sec.R.S., will deliver his Lecture entitled "Problems presented by Films on Solid Surfaces," on Thursday, February 26th, 1925, at 8 p.m., in the Lecture Hall of the Institution of Mechanical Engineers, Storey's Gate, Westminster, S.W. 1.

### ANNIVERSARY DINNER.

The Anniversary Dinner will be held in the Grand Hall of the Hotel Victoria, Northumberland Avenue, W.C. 2, on Thursday, March 26th, 1925, the day of the Annual General Meeting. Further particulars will be issued shortly.

### ORDINARY SCIENTIFIC MEETINGS IN FEBRUARY.

February 5th, at 8 p.m.

February 19th, at 8 p.m., when a ballot for the election of Fellows will be held.

List of Papers received between December 19th, 1924, and January 15th, 1925. (This List does not include the titles of papers, or abstracts thereof, which have been read at a Scientific Meeting, or which have appeared in the Journal.)

- "Note on a simple constant-level apparatus for thermostats and water-baths." By J. M. SMITH.
- "Studies of equilibrium in systems of the type  $\text{Al}_2(\text{SO}_4)_3\text{-M''SO}_4\text{-H}_2\text{O}$ . Part I.  $\text{Al}_2(\text{SO}_4)_3\text{-CuSO}_4\text{-H}_2\text{O}$ .  $\text{Al}_2(\text{SO}_4)_3\text{-MnSO}_4\text{-H}_2\text{O}$  at 30°." By R. M. CAVEN and T. C. MITCHELL.
- "The mercuration of aromatic substances. Part I. Toluene." By S. COFFEY.
- "The chemistry of the three-carbon system. Part IV. A case of retarded mobility." By G. A. R. KON and R. P. LINSTEAD.

- "The velocity of reaction in mixed solvents. Part VIII. The velocity of formation of certain quaternary ammonium salts." By H. McCOMBIE, H. M. ROBERTS, and H. A. SCARBOROUGH.
- "Crystalline cuprous bromide." By D. B. BRIGGS.
- "Phenyl benzyl diketone and some derivatives." By T. MALKIN and R. ROBINSON.
- "Tautomerism of amidines. Part V. Methylation of glyoxalines by diazomethane. Bromination of 4(or 5)-phenylglyoxaline." By W. G. FORSYTH and F. L. PYMAN.
- "The mass of the hydrogen atom computed." By E. F. MORRIS.
- "The reduction of aromatic nitro-compounds." By R. W. WEST.
- "A redetermination of the atomic weight of boron." By H. V. A. BRISCOE and P. L. ROBINSON.
- "The interaction of nitrogen sulphide and sulphur. Nitrogen persulphide." By F. L. USHER.
- "The composition of the liquid and vapour phases in mixtures of glycerol and water." By M. P. I. V. IYER and F. L. USHER.
- "Note on some metallic couples decomposing water at the ordinary temperature." By E. S. HEDGES and J. E. MYERS.
- "Styrylbenzopyrylium salts. Part IV.  $\gamma$ -Styryl derivatives of 5:7-dihydroxy- and 5:7-dimethoxy-2-phenyl-4-methylbenzopyrylium chloride." By G. H. WALKER and I. M. HEILBRON.
- "Styrylbenzopyrylium salts. Part V. Distyryl derivatives of 7-hydroxy-2:4-dimethylbenzopyrylium chloride." By I. M. HEILBRON, G. H. WALKER, and J. S. BUCK.
- "Interactions of tellurium tetrachloride and acetic anhydride." By G. T. MORGAN and H. D. K. DREW.
- "Quantitative reduction by hydriodic acid of halogenated malonyl derivatives. Part IV. The influence of substitution in the amide group on the reactivity of the halogen atom in bromo-malonamide." By R. W. WEST.

CERTIFICATES OF CANDIDATES FOR ELECTION AT  
THE BALLOT TO BE HELD AT THE ORDINARY  
SCIENTIFIC MEETING ON THURSDAY, FEBRUARY  
19TH, 1925.

N.B.—The names of those who sign from "General Knowledge" are printed in *italics*.

ASHLEY, JULIUS NICHOLSON, 37, Scarsdale Road, Victoria Park, Manchester.  
British. Chemical Research student at the Victoria University of Manchester.  
B.Sc. Hons. (Birm.) 1923. A.I.C. 1923. (*Signed by*) Arthur Lapworth,  
R. Robinson, Frederick Challenger.

BARTRAM, GEORGE ALFRED, 19, Valley Rd., Spital, Chesterfield. British. Teacher of Chemistry. Student at University College, Nottingham, 1914-15, 1919 and 1920. B.Sc. (London Pass), 1920; B.Sc. (Lond., 2nd Class Hons. Chem.), 1922. Elected A.I.C. 1923. Teacher of Chemistry 1920 to present time. In charge of Chem. Advanced Course recognised by Board of Education 1922 to present time. (*Signed by*) F. Stanley Kipping, E. B. R. Prideaux, J. B. Firth, A. R. Blackburn.

BEEBY, GEORGE HARRY, 92, Ashby Rd., Loughborough. English. Chemistry Research Student. Training received at Loughborough College, under A. Bramley, Esq., D.Sc., F.I.C., etc. Hold degree of B.Sc. London. 2nd Hons. Chemistry. A.I.C. Diploma of Loughborough College (Hons.). Engaged on Metallurgical Research. (*Signed by*) Arthur Bramley, George Lawton, T. L. Garner, A. T. Eggington.

BISHOP, ARTHUR HENRY BURDICK, Westminster Training College, 130, Horseferry Rd., Westminster, S.W. 1. British. Assistant Lecturer in Chemistry. Research for one year at Jesus College, Oxford, on "Adsorption of Gases by Glass Wool." At present engaged in research on "Optical Rotatory Dispersion." (*Signed by*) P. C. Austin, E. E. Walker, Gerald Druce.

BLOOMER, VINCENT, B.Sc., 33, Balfour St., Oldham. British. Student. Have completed 3 years' Honours Chemistry Course at Victoria University, Manchester; am now doing one year's research course for the degree of M.Sc. (*Signed by*) Henry Stephen, F. P. Burt, D. H. Bangham.

BOTTOMLEY, CLAUD McCLELLAN, 43, Manor Road, Blackburn. British. Brewer. B.Sc. (Lond.) [Chemistry taken at Final Exam.]. (*Signed by*) W. J. Stansfield, A. Bramley, G. W. F. Holroyd.

BROWN, FREDERICK STANLEY, "Rosebank," Tile Hill Lane, Coventry. British. Research Student (in receipt of a Scientific and Industrial Research Grant). Two years' works experience. Academic training at University College of Wales, Aberystwyth, from 1919 up to present time. 1st Hons. B.Sc. (Wales). A.I.C. Over two years' research experience. *J.C.S.* 1923, Vol. 123, 2430. *J.C.S.* 1924, Vol. 125, 2219. (*Signed by*) T. Campbell James, C. R. Bury, Albert Green.

CHORLEY, PERCY, 87, Hazelbottom Rd., Crumpsall, Manchester. British. Chemist. M.Sc. (Vict.). Beyer Fellow, Victoria University, Manchester, 1914. Published, with Professor A. Lapworth, a paper on "A new series of nitrogenous compounds derived from camphoroxalic acid" (*Trans.*, 1920, 728). Chemist, on the staff of British Dyestuffs Corporation, Ltd. (*Signed by*) E. H. Rodd, R. Brightman, H. Swann, Carlton Butler, Morvan Lapworth.

COOMBS, HERBERT ISAAC, Trinity College, Cambridge. British. Student. Bachelor of Science, First-class Bachelor of Arts of Oxford; Research work under Professor Perkin, F.R.S., and Professor Hopkins, F.R.S. (*Signed by*) W. H. Perkin, H. Raymond Ing, R. H. Griffith, N. V. Sidgwick.

CORBET, ALEXANDER STEVEN, "Abbey Stone House," Sidmouth St., Reading. British. Chemist. B.Sc., Ph.D. (London University). A.I.C. Papers published with Professor H. Bassett: "The Hydrolysis of Potassium Ferricyanide and Potassium Cobalticyanide by Sulphuric Acid," *J.C.S.*, June 1924. "A Phase-rule Study of the Cupro-, Argento-, Auro-, and Thallo-cyanides of Potassium," August, 1924. (*Signed by*) H. Bassett, J. W. Dodgson, D. Roy Maxted.

CROWE, WILLIAM HAUGHTON, "Bettswville," Cherry Valley Park, Belfast (N. Ireland). British. Assistant in Chemistry (Q.U.B.). Research in Chemistry, Queen's University, Belfast. 1922-23, subject, "Effect of Light

on Brominations." 1923-24, University College, London, "Pyridones." (*Signed by*) A. W. Stewart, J. K. Marsh, H. Graham.

DAVIDSON, ALFRED, 91, Hazelbottom Rd., Cheetham, Manchester. British. Research Chemist, British Dyestuffs Corporation. B.Sc. (Glasgow) with distinction in Chemistry. T. S. Patterson and A. Davidson, *J.C.S.* (1912), 101, 374. (*Signed by*) E. J. Amies, C. Hollins, S. C. Bate.

DAVIS, ERNEST JAMES, 45, McClure Street, Ormeau Road, Belfast. British. Chief Assistant Chemist, Messrs. Harland and Wolff, Belfast. Ten years Industrial Chemist with Messrs. J. Stone & Co., Deptford; Martin's Heat Treating and Testing Works, Coventry; Harland and Wolff, Ltd., Belfast. (*Signed by*) Henry Wren, Theophilus Harper, James W. Porter.

DUFFIN, WALTER MARK, 35, Binfield Road, S.W. 4. English. Research Student. A.R.C.S. B.Sc., London. Engaged in Research. (*Signed by*) H. B. Baker, G. A. R. Kon, Arnold Stevenson, M. A. Whiteley.

DURRANT, ARTHUR HYNARD, 47, Cassiobury Rd., London, E. 17. British. Bacteriologist and Demonstrator in Chemistry, Guy's Hospital and The Technical Institute, E. 17. Inventor of a Constant Cell, see *Junior Mechanic*, May, 1921. (*Signed by*) W. H. Collier, H. L. Long, E. C. Edgar.

EATON, FREDERICK JOHN, Ph.D. (Edin.), B.Sc. (Edin.), A.I.C., Chemical Laboratory, Gas Light and Coke Coy., Horseferry Rd., Westminster. British. Research Chemist, Gas Light and Coke Coy. Formerly part time Assistant Dept. of Medical Chemistry, Univ. of Edinburgh, and Research Student under Prof. Barger, F.R.S., Univ. of Edinburgh. Paper on "Blue Adsorption Compounds of Iodine," accepted 9th Sept., 1924. (*Signed by*) George Barger, Ellen Field, John E. Mackenzie.

EDWARDS, GEORGE ALFRED, 21, Crystal Palace Rd., London, S.E. 22. British. Demonstrator in Chemistry, King's College, London University. B.A. Oxon., First Class Honours in Chemistry. B.Sc. Oxon. Demonstrator in Chemistry at King's College, London University. Joint author of "Amino-derivatives of Tetrahydrocarbazole." (*Signed by*) Samuel Smiles, A. J. Allmand, E. W. McClelland, Frank W. Stoyke.

EMELEUS, HARRY JULIUS, Battle, Sussex. British. Student. Research Student at Imperial College of Science and Technology. Graduate of London University. Chemistry (1st Class Hons.). A.R.C.S. (1st Class Chemistry). (*Signed by*) H. B. Baker, M. A. Whiteley, M. Carlton.

ESDALE, RALPH MARCRAVE, the Lytle Coal Co., Ltd., Minerville, Pa., U.S.A. British. Chemist to the Lytle Coal Co., Ltd., Minerville, Pa., U.S.A. Trained at Finsbury Technical College, 1919-1923. Desires to receive the publications of the Chemical Society. Awarded Diploma, July, 1922, A.C.G.F.C. (*Signed by*) A. J. Hale, H. M. Atkinson, R. J. Seal.

FLACK, EDWARD HUGH ST. CLAIR, 9, Bridge Street, Cambridge. British. born subject. Research Student in Organic Chemistry, Univ. of Cambridge. M.Sc. (Univ. of S. Africa). (*Signed by*) W. J. Pope, W. H. Mills, R. C. Odams.

FOOTNER, HENRY BELL, Great Dean, nr. Christchurch, Hants. British. Chemist. B.Sc. (Lond.), 1st Hons. Chemistry. 1922-1924, Research work on reactions of Alkyl Thiosulphates and Allied Compounds—publication pending. (*Signed by*) Samuel Smiles, C. Montague Bere, Hubert Painter.

GEOGHEGAN, DESMOND, 13, Port View, Heavitree, Exeter. British. Analytical Chemist. Three years pupil-assistant to T. Tickle, Esq., Devon County Analyst; two and a half years' experience in Practical Organic Chemistry and General Chemical Analysis at University College, Exeter, under Prof. W. H. Lewis. Educated at Sherborne School, Dorset, and at Douai School, Berks. Desires Fellowship, to have use of the Library, and

to keep in touch with modern research through the publications of the Society. (*Signed by*) Thomas Tickle, S. Glasstone, F. Southerden, R. King, W. H. Lewis.

GIBBY, CLIFTON WILLIAM, "The Rise," Foxley Lane, Purley, Surrey. British. Research Worker in Chemistry. Three years' study of Chemistry at University College, London, including a year's research with Professor Irvine Masson. Honours B.Sc. in Chemistry. A.I.C. by Exam. Now appointed Research Assistant to Mr. A. C. Egerton, at the Clarendon Laboratory, Oxford. (*Signed by*) F. G. Donnan, Henry Terrey, L. F. Gilbert.

GIBSON, REGINALD OSWALD, 41, Peak Hill, Sydenham, S.E. 26. British. Research Chemist. Bachelor of Science (London), 1924. Associate of the Institute of Chemistry, 1924. (*Signed by*) F. G. Donnan, W. E. Garner, O. L. Brady, I. E. Weber, V. W. Slater.

GLIMMINGHAM, CONRAD THEODORE (F.I.C.), Haddon House, Aarenbury Lane, Harpenden, Herts. British. Research Chemist, Insecticides and Fungicides Dept., Rothamsted Experimental Station, Harpenden, Herts. Research and Advisory Work in Agric. Chemistry at University of Bristol, 1909-1919. Research Work, Chemical Warfare Dept., 1916-1919. Chemist, Research Dept., Olympia Agric. Co., 1920-1923. Since then at Rothamsted Experimental Station. Various papers on Agric. Chem. subjects in *Jour. Agric. Sci.*, *Ann. App. Biol.*, etc. (*Signed by*) E. J. Russell, H. J. Page, H. W. Dudley.

GOODSPEED, JONATHAN, 36, Vicarage Lane, East Ham, E. 6. Student. Chemistry Student at East London College. (*Signed by*) J. R. Partington, E. E. Turner, B. D. Shaw.

GREENHALGH, RICHARD, 139, Stuart Street, Clayton, Manchester. British. Research work at Manchester University for M.Sc. Degree. Degree of B.Sc. in Chemistry Honours at Manchester University, Class II, Division I. (*Signed by*) Arthur Lapworth, Henry Stephen, Frederick Challenger, Fred Fairbrother, Colin Campbell.

GRIFFITH, ROBERT OWEN, Muspratt Laboratory of Physical Chemistry, Liverpool University. British. Lecturer in Physical Chemistry, Liverpool University. B.Sc., 1st Class Hons. Chem. (Liverpool), 1914; M.Sc., 1915; A.I.C., 1915-1918. Chemist under D.I.H.E., Liverpool. 1919, Lecturer in Physical Chemistry, Liverpool University. *Publications*: "Einstein's Law of the Photochemical Equivalent," Appendix VII. Lewis's "System of Physical Chemistry," Vol. 3, 3rd edition. Sections "Chemical Equilibrium" and "Reaction Velocity" in "Tables Annuelles de Constantes," Vol. 5 (in print). Papers in *J.C.S.*: (1) 1916, 109, 67; (2) 1917, 111, 389; (3) 1921, 119, 1948; (4) 1923, 123, 2752; (5) 1923, 123, 2767. Also *Trans. Faraday Soc.*, 1921, 17, 525. (*Signed by*) W. C. M. Lewis, F. C. Guthrie, E. C. C. Baly, I. M. Heilbron.

HAILWOOD, ANTHONY JAMES, Hazel Bank, Hazel Road, Altrincham. British. Research Chemist in the British Dyestuffs Corporation, Ltd., Manchester. Formerly on the manufacturing staff of the same Corporation. B.Sc. with 1st Class Honours in Physics (Manchester University). (*Signed by*) W. H. Perkin, G. R. Clemo, S. C. Bate.

HISCOCKS, EDWARD STANLEY, 5, Rosehill, Swansea. British. Research Student, Chemistry Dept., University College, Swansea. Part-time Lecturer in Chemistry to the Municipal Technical College, Swansea. Hons. Graduate (Wales) in Chemistry. Part-time Lecturer in Physical and Inorganic Chemistry to the Municipal Technical College, Swansea. (*Signed by*) J. E. Coates, Leonard E. Hinkel, Ernest E. Ayling.

HODGSON, HERBERT HENRY, M.A. (Cambridge), B.Sc. (London), Ph.D. (Heidelberg), F.I.C., 136, Paley Road, Bradford. British. Head of Colour Chemistry Dept., Technical College, Huddersfield, since Sept. 1918. Previous posts, 1908-1912, Lecturer and Research Chemist, Technical College, Bradford; 1912-1915, Head of Chemical Dept., Northern Polytechnic Institute, London, N.; 1915-1918, Chief Chemist to Messrs. Brotherton & Co. at Birmingham and Stourton (Leeds). *Papers*: (1) "Dissertation," Heidelberg, 1908; (2) "Some Reactions of Phenyl Iodide, Chloride, and Iodosobenzenes Acetate," *Proc. Camb. Phil. Soc.*, 1908; (3) "Isomere organische Magnesiumverbindungen" (with J. Schmidlin), *Ber.*, **41**, 430-437; (4) "Triphenylelessigsäure und Tritolylessigsäure" (with J. Schmidlin), *Ber.*, **41**, 438-447; (5) "The Iodination of Phenols, etc." (with W. M. Gardner), *J.C.S.*, 1909, **95**, 1819-1827; (6) "The Development of Sulphuric Acid from Sulphide Dyestuffs and from Free Sulphur" (with W. M. Gardner), *J. Soc. Chem. Ind.*, 1910; (7) "The Action of Sulphur on Amines. Part I. *o*-Toluidine," *J.C.S.*, 1912, **101**, 1693-1701; (8) "The Action of Sulphur on Amines. Part II. Aniline," *J.C.S.*, 1914, **105**, 952-956; (9) "Nitrosation of Phenols. Part I. 3-Chloro-4-nitrosophenol and its Conversion into Two Isomeric Chloroquinone Monoximes" (with F. H. Moore), *J.C.S.*, 1923, **123**, 2499-2507; (10) "The Preparation of 2- and 4-Nitro-1-naphthols" (with E. Kilner), *J.C.S.*, 1924, **125**, 808-811; (11) "Direct Sulphuration of Aniline," *J.C.S.*, 1924, **125**, 1855-1858; (12) "Mononitration of *p*-Chlorotoluene" (with P. Anderson), *J.C.S.*, Oct. Notes, 1924; 4 papers now before the Publication Committee. *Patents*: Some New Sulphur Compounds and Dyestuffs therefrom, 1912; Preparation of Meta Halogenated Phenols, Brit. Pat. 200714; Preparation of Dihalogenated Fluoranes, Brit. Pat. 205254; Preparation of Tautomers of Nitroso-*m*-halogenated Phenols, Brit. Pat. 206734; 2 now filing on *m*-Hydroxybenzaldehyde and Azo Dyestuffs from Alkyl Thiol Amines. (*Signed by*) James Bruce, L. Gordon Paul, R. W. Merriman.

HUGHES, DAVID, 18, Holmes Grove, Westbury on Trym, Bristol. British. Chemist. At present on the Staff of British Colloids, Ltd. Passed Qualifying Examination of the Pharmaceutical Society, 1894. Engaged for 10 years in Chemical and Clinical Laboratory Work on my own account in Bath and Clifton. Studied Bacteriology under Prof. Stanley Kent, Bristol University. Co-operated with Dr. A. L. Flemming, Bristol, in a monograph on the Spectroscopic Examination of Blood in Ethyl Chloride Anaesthesia. Desirous of keeping up to date in developments of Chemical Science and to be allowed the privilege of the Library. (*Signed by*) John Macvie Hill, Archibald Macpherson, John F. Ward, Geo. A. Turner.

HUGHES, KATHLEEN HARRIET, 8, Ormiston Drive, Knock, Belfast. British. Lecturer in Pure and Applied Chemistry, Municipal College of Technology, Belfast. Lecturer in Chemistry, M.C.T.B., 1920-1924. Temporary Assistant Chemist, Government Laboratory, Strand, 1917-1920. (*Signed by*) Henry Wren, Theophilus Harper, James W. Porter.

HUNT, ARTHUR FREDERICK, 6, Seabrooke Cottages, Front Lane, Cranham (nr. Upminster), Essex. Chemical Research Student. B.Sc. (Lond.), 1st Class Hons. Research Student at East London College under Dr. E. E. Turner. (*Signed by*) J. R. Partington, Elwyn Roberts, D. C. Jones, E. E. Turner.

INGHAM, BERTRAM HOBART, Yew Bank, Langham Rd., Bowdon, Cheshire. British. Research Student. B.Sc. Hons., Victoria University, Manchester (*Signed by*) Arthur Lapworth, F. P. Burt, J. E. Myers, Henry Stephen, R. Robinson.

JOHNSON, JOHN DOBNEY, 6, Edward St., Loughborough, Leics. British. Research Student. B.Sc. Hons., London. Royal Scholar. Research Student. (*Signed by*) Jocelyn Thorpe, M. A. Whiteley, G. A. R. Kon, Arnold Stevenson.

JOHNSON, WILFORD JORDAYNE, "Devanha," South Rd., Brighton Beach, Victoria. Licensed Gold Assayer and Chemical Analyst. Associate, Australian Chemical Institute. 1913-1922 (except for War Service), Assistant to Mr. Henry W. Levy, Assayer and Metallurgical Chemist, Melbourne, Australia. September 1922 to date, in partnership with Mr. Henry W. Levy, in private practice as Assayers and Metallurgical Chemists. (*Signed by*) D. O. Shiels, Henry W. Levy, Robert Law.

JONES, CECIL BRELLISFORD OAKES, Old Sewage Works, Whitley, Coventry. British. Analytical Chemist to the Coventry City Council. Four years assistant to W. D. Scouller, Esq., M.Sc., A.I.C., F.C.S. Ten years chief assistant to John Haworth, Esq., F.I.C., F.C.S. Author of "Sewage Works Analyses" (*Surveyor*, April 25th, 1924). (*Signed by*) John Haworth, W. D. Scouller, James H. Kershaw.

JONES, WILLIAM WENALIT, 19, White Hart Lane, Wood Green, N. 22. British. Assist. Chemist, The British Drug Houses, Ltd., Graham St., City Road, N. 1. B.Sc. Wales, June 1922; 2nd Class Honours Chemistry. M.Sc. Wales, June 1924. One session's Research Experience at the University College of North Wales, Bangor. (*Signed by*) Francis H. Carr, Charles Alex. Hill, S. Sugden.

KENNEDY, ALAN RICHMOND, 88, Sellons Avenue, Harlesden, N.W. 10. British. Assistant Chemist (Thomas de la Rue & Co., 110, Bunhill Row, E.C.). Undergraduate (University of London) in Faculty of Science (graduation, 1925). Employed in commercial Laboratory (founded by Dr. Hugo Müller). Desirous of receiving Society's literature concerning particularly modern researches in Organic Chemistry. (*Signed by*) Hubert L. Lucking, P. C. L. Thorne, E. de Barry Barnett, Henry J. S. Sand.

KENYON, FRANK, Power Station, Creekmouth, Barking, Essex. British. Chemist to the New Electrical Station, Barking, County of London Electric Supply Co., Ltd. Associate of the Institute of Chemistry, Branch D. (*Signed by*) J. Kenyon, J. L. White, Harold Hunter.

KING, FREDERICK ERNEST, 101, Cavendish Road, Highams Park, Essex. British. Student (Research at East London College). (*Signed by*) J. R. Partington, E. E. Turner, D. C. Jones.

KNOTT, ERIC, 21, West Richmond St., Edinburgh. British. Lecturer in Chemistry and Physics at the Royal Dispensary and School of Pharmacy of Edinburgh. Student of the Royal Dispensary and School of Pharmacy of Edinburgh, 1919-21, from which place I obtained the Qualifying Certificate of the Pharmaceutical Society and also the Diploma of Pharmaceutical Chemist. For past three years engaged as Lecturer at above School in Chemistry and Physics. (*Signed by*) Russell G. Thin, A. Scott Dodd, William Duncan.

KRACOVSKI, JACOB, 11, Ernest St., London, E. 1. English. Research Student. B.Sc., 1st Class Hons. in Chemistry. At present engaged in research. (*Signed by*) Jocelyn Thorpe, G. A. R. Kon, M. A. Whiteley, E. H. Farmer.

LAMBOURNE, HERBERT, 44, Brighton Road, S. Croydon, Surrey. British. Head of the Chemistry Dept., Borough Polytechnic Institute, Borough Road, S.E. 1. Late Senior Lecturer in Organic Chemistry, University College, Nottingham. Research work on "Quinaldine and Derivatives," "Methyl-

stannonic Acid and Derivatives." M.A. (Cantab.), M.Sc. (Lond.), F.I.C. (*Signed by*) F. S. Kipping, J. B. Firth, E. B. R. Prideaux, F. C. Laxton.

LAW, JOHN JOSEPH, 45, Fulham Rd., South Kensington. English. Chemist, Dentist, and Optician. Holding the Qualifying Certificate of the Pharmaceutical Society of G.B. (Lond.). Hon. Treasurer of the Chemists' Dental Society of Great Britain and Ireland (Reg. No. 15073). Hon. Gen. Secretary of the Institute of Chemists and Opticians. Examiner in Refraction to the Institute of Chemists and Opticians. Member of the Public Dental Services. At one time principal of the West End College of Chemistry and Pharmacy. Private tutor of Chemistry for many years. (*Signed by*) Percy Barrs, Robert W. Lindsey, James Harry Smith, Frank B. Arnold.

LE FEVRE, RAYMOND JAMES WOOD, 17, Broadway Avenue, St. Margarets, Twickenham, Md. British. University Undergraduate. Chemistry Student, East London College (2nd year of final). (*Signed by*) J. R. Partington, E. E. Turner, B. D. Shaw.

LEIPER, ALEXANDER JOHN SIMPSON, 74, Whitworth Road, South Norwood, London, S.E. 25. Scottish. Chemist. I wish to join the Chemical Society in order to keep in touch with up-to-date research and proceedings. I am an Associate of the Royal College of Science in Chemistry. (*Signed by*) M. A. Whiteley, Jocelyn Thorpe, James C. Philip.

LENNANE, ALFRED JAMES ANDREW, 22, Ryder St., St. James's, S.W. 1. British. Physician and Surgeon. Formerly Opium Analyst to the Indian Government. M.R.C.S., L.R.C.P. (*Signed by*) Frank Radcliffe, Thos. R. Owles, Samuel Gray Fenton.

LILEY, FREDERICK WILLIAM, 41, Beaconsfield Rd., West Croydon. British. Assistant, Croydon Borough Analyst. Student at King's College, London. 2 Years assistant to Croydon Borough Analyst. (*Signed by*) Lester Reed, Eric K. Rideal, Ed. Hinks.

LUNT, JAMES GILBERT, 17, York Avenue, Sefton Park, Liverpool. British. B.Sc. of Liverpool. Chemical Analysis, c/o Anglo-South American Meat Co., San Martin 235, Buenos Aires, Argentina. (*Signed by*) I. M. Heilbron, William Doran, Stanley J. C. Snedker.

McVICKER, WILLIAM HAMILTON, 45, Wellington Park, Belfast. British. Chemical Research Student. B.Sc. (1st Class Honours), and M.Sc., Queen's University of Belfast. Musgrave Research Student, Queen's University of Belfast, 1923-25. Joint author of 7 papers as follows: *J.C.S.*, 123, 642, 817, 820, 2147; 125, 1743; *J. Amer. C. S.*, XLVI, 1351; *Phil. Mag.*, XLVIII, 628. (*Signed by*) A. Killen Macbeth, Ernest W. McClelland, A. W. Stewart, J. K. Marsh, H. Graham.

MANN, THOMAS, Alexander Terrace, Bransty, Whitehaven. British. Partner in firm of Hellon and Mann, Analytical and Consulting Chemists, Whitehaven. (*Signed by*) G. W. Martin, C. A. Mitchell, Bernard Dyer.

MASCARENHAS, VINCENT MARK, Bangalore. Indian Christian. Student, Indian Institute of Science, Bangalore. Bachelor of Arts of the University of Mysore with Chemistry as a main subject. Completed the work on the Chemistry of Indian Black Mustard Seed Oil, and that of Malabar Tallow (*Vateria Indica*) awaiting publication in the Journal of the Indian Institute of Science. (*Signed by*) J. J. Sudborough, M. O. Forster, Roland V. Norris.

MILES, FRANK DOUGLAS, Caldwell Road, West Kilbride, Ayrshire. English. Research Chemist. Asst. Lecturer in Inorganic Chemistry, Heriot-Watt College, Edinburgh, 1909-1915. Service in Dept. of Explosives Supply,

1915-1919. Senior Research Chemist, H.M. Factory, Gretna. Chief Research Chemist, Messrs. Burt, Boulton, and Haywood, 1919-1922. At present a member of the Research Section of Nobel Industries, Ltd. *Publications*: "Egyptian Blue," with H. P. Laurie and W. F. P. McLintock, *Proc. Roy. Soc.*, 1914. Also papers in *Proc. Roy. Soc. Edin.* (two, 1915), and in *Journ. Soc. Chem. Ind.*, 1920 and 1922. "A Volumetric Method for the Estimation of Lead," *J.C.S.*, 1915, **107**, 988; "The Solubility of Sulphur Dioxide in Sulphuric Acids" (with J. Fenton), *J.C.S.*, 1920, **117**, 59. Also author of forthcoming volume of Lunge's "Sulphuric Acid and Alkali" entitled, "Sulphuric Acid—Contact Process." (*Signed by*) John Weir, Norman Picton, W. Young.

NIGHTINGALE, EDWARD ARTHUR, 39, Pacific Rd., Fords Park Rd., Canning Town, E. 16. British. Commercial Analytical Chemist, Messrs. Burt, Boulton, and Heywood, Ltd., Coal Tar and Creosote Works, Silvertown, 1918-1920. Messrs. Pinchin, Johnson & Co., Paint and Varnish Manufacturers, Silvertown, 1920. Student at Borough Polytechnic for Paints, Oils, and Colours. Student at East Ham Technical College, Chemistry, 6 years' course. City and Guilds of London Institute, Coal Tar, 1st Class certificate. (*Signed by*) R. W. Griffiths, W. H. Barker, W. T. Clough.

OFFORD, FREDERICK WILLIAM, 66, Watford Road, Canning Town, London, E. 16. English. Analytical Chemist. National Certificate in Chemistry, "Higher" or "Advanced," 1923. Worked under J. Bendix, F.I.C., F.C.S. (1915-1920). (*Signed by*) E. W. Griffiths, E. G. Churchill, W. H. Barker.

OUTRIDGE, LIONEL EDWARD, "Fernhurst," The Avenue, Chingford, Essex. British. Research Student. B.Sc. (London), Honours Chemistry. Research student at East London College under Dr. D. C. Jones. (*Signed by*) J. R. Partington, Elwyn Roberts, D. C. Jones, E. E. Turner.

PARKER, THOMAS WEBSTER, Mildenhall, Suffolk. British. Chemist. Student at the Royal College of Science (London), 1919-23. A.R.C.S., 1921. Chemist to the Dartmoor China Clay Co. (*Signed by*) James C. Philip, M. B. Donald, A. B. P. Page.

PARKER, WILLIAM BAYLEY, F.I.C., 3, Murray Road, Rugby, Warwickshire. Chief Chemist (Research and Works), The British Thomson-Houston Co., Ltd., Rugby. Chief Chemist to B.T.H. from April 1902, and Author of "Specifications for Foundry Pig Irons," Pt. I and II., Proceedings British Foundrymen's Association, 1912-13 and 1906; "Specifications for Alloys for High Speed Superheated Steam Turbine Blading," *Jnl. Inst. of Metals*, No. 2, 1915; "Purchasing Specifications for Resins and Shellac," *Jnl. Oil and Colour Chemists' Association*, Vol. V, 1922; "Variation of Refractive Index and Density of Benzene with Temperature," W. B. Parker and G. Thompson, *Trans. Chem. Soc.*, 1922, Vol. **121**. (*Signed by*) Percy F. Frankland, S. Judd Lewis, Gartha Thompson.

PARSONS, STUART RUSSELL, 65, Oakfield Road, Ilford. Research Student (Chemistry). B.Sc. (Lond.), Honours Chemistry. A.I.C. Research student at East London College, under Dr. E. E. Turner. (*Signed by*) J. R. Partington, Elwyn Roberts, D. C. Jones, E. E. Turner.

PAYNE, WILLIAM SAMUEL, Moseley House, Rounds Green, Oldbury. English. Chemist. 5 years Laboratory Steward, Oldbury Secondary Schools. 3 years Laboratory Steward, Oldbury Technical Schools. 2 years Demonstrator and Assistant Chemistry Master, Oldbury Technical Schools. U.E.I. Certificate in Advanced Inorganic and Physical Chemistry, 1924. (*Signed by*) John G. Clarke, C. Mansfield Swain, E. Pritchett.

PIERSON, KENNETH JOHN, 105, Winterbourne Road, Thornton Heath.

British. Two years Assistant to the Croydon Borough Analyst. (*Signed by*) Lester Reed, Ed. Hinks, Henry P. Stevens.

PIKE, RICHARD EDWIN, 6, Haymarket, London, S.W. 1. British. Student. Pass B.Sc. (Lond.). Studying for Honours at Royal College of Science since October, 1923. (*Signed by*) H. B. Baker, H. F. Harwood, M. A. Whiteley, James C. Philip.

PLUMBRIDGE, DOUGLAS VICTOR, 21, Heathfield Rd., Wavertree, Liverpool. British. Research Chemist. Ph.D. (Munich). A.R.C.Sc. (London). A.I.C. On the staff of the Chemical Dept., Messrs. The Salt Union, Ltd., Western Point, Cheshire. (*Signed by*) A. Bramley, Norman M. Comber, James C. Philip.

PRESTON, JOHN MASSEY, The Dower House, Euxton, Chorley, Lancs. British. Private Research in Chemistry. B.Sc., 2nd Class Hons. Chem. (Liv.). A.I.C. (*Signed by*) E. C. C. Baly, H. Rogerson, F. C. Guthrie.

RAPER, RICHARD, 12, Mill Lane, Cambridge. British. Research Student. 1st Class Honours in Nat. Sci. Tripos, Parts I and II (Chemistry) of Cambridge University. Two years' research work under Dr. Mills, F.R.S., and two years' experience as Demonstrator in Cambridge University Chemical Laboratory. (*Signed by*) W. J. Pope, W. H. Mills, H. R. Stevens.

RULE, JOHN FREDERICK JAMES, 29, Alexandra Road, East Ham, E. 6. Research Student. Have passed the B.Sc. Hons. examination in Chemistry of London University, and I am undertaking Research Work under Professor Partington. (*Signed by*) J. R. Partington, W. H. Patterson, E. E. Turner.

SCORAH, LESLIE VIVIAN DONALD, 139, Dodworth Road, Barnsley (Yorks). British. Research Student. B.Sc. (Hons. Chem.) Sheffield. A.I.C. (*Signed by*) W. P. Wynne, G. M. Bennett, F. G. Tryhorn, Arthur W. Chapman.

SHEPPARD, GEORGE FREDERICK, 72, Mortlake Rd., Kew Gardens, Surrey. British. Chemist, Cl. II. Department of Government Chemist. Position as above. Student, Royal College of Science, London, 1900-2, passed examinations of the Associateship Course in Chemistry for Revenue Students. Past experience: Analytical work in above Department since November, 1902. (*Signed by*) Thos. J. Cheater, W. Williamson, Robert Robertson, Geo. Stubbs.

SHEVLIN, JOSEPH THOMAS, "Corwen," Frederick Road, Wylde Green, Birmingham. British. Patent Agent. Associate of the Chartered Institute of Patent Agents. Associate of the Institute of Physics. Associate of the Institution of Electrical Engineers. Fellow Physical Society of London. I am desirous of becoming a Fellow of the Society in order that I may be well versed in the more recent developments in Chemistry. (*Signed by*) G. G. Henderson, F. J. Wilson, E. W. Moss.

SMETHURST, ARTHUR FREDERICK, Nippon, Cedar Road, Sutton, Surrey. British. Undergraduate. Student in Chemistry at the Royal College of Science since October, 1922. (*Signed by*) H. B. Baker, H. F. Harwood, M. A. Whiteley, James C. Philip.

SMEWING, ETHEL MINNIE, 42, Park Avenue South, Crouch End, N. 8. British. Teacher. B.Sc. Hons. Chem. (Lond.). Teacher of Chemistry. (*Signed by*) J. F. Spencer, M. S. Crewdson, H. Crompton.

SMITH, ALTON EWART CLARENCE, Breydon, Oakmount Avenue, Southampton. British. Lecturer in Physical Chemistry, University College of Southampton. Lecturer as above since 1919. (*Signed by*) D. R. Boyd, C. K. Ingold, C. F. Cross.

SNELUS, SUZANNE MABEL LAVINIA, 67, Elgin Mansions, W. 9. British. Analytical and Consulting Chemist. Member of the Pharmaceutical Society

Associate of the Institute of Chemistry. Senior Analyst to Messrs. Parke Davis & Co. Chemist in Charge to Messrs. J. C. Arnfield & Sons. Assistant Research worker, Dr. F. W. Passmore. (*Signed by*) P. C. L. Thorne, E. de Barry Barnett, Henry J. S. Sand.

SPIERS, CLAUDE HYMAN, 34, Brondesbury Road, N.W.6. British. Research Chemist. M.A. (Cambridge). B.Sc. (London). Ph.D. (Cambridge). *T.*, 1924, 125, 450. (*Signed by*) Jocelyn Thorpe, Arnold Stevenson, G. A. R. Kon, H. M. Spiers.

STERN, HAROLD JACOB, 17, Croxteth Grove, Sefton Park, Liverpool. British. Chemist to firm of paper stainers. Research on Photosynthesis, Liverpool University, 1921-22. Research in Organic Chemistry under Prof. W. H. Perkin, Oxford, 1922-24. B.Sc. (Hons. Chem.), Liv., 1921. Ph.D., Liv., 1923. B.Sc., Oxon., 1924. Baly, Heilbron, and Stern, 1923, 123, 185. (*Signed by*) W. H. Perkin, Fredk. A. Mason, G. R. Clemo, S. G. P. Plant, E. Hope, F. Raymond Ing.

STILL, CHARLES JAMES, 50, Queen's Parade, Bangor, Co. Down. British. Lecturer in Bleaching and Dyeing, Municipal College of Technology, Belfast. B.Sc. (Lond.); M.Sc. and Ph.D. (Queen's Univ., Belfast). Joint author of several communications (in collaboration with Dr. Henry Wren) on Diphenylsuccinic Acids, published in *J. Chem. Soc.* (*Signed by*) Henry Wren, James W. Porter, Theophilus Harper.

SYED, MOHAMMAD HASSAN, Rupar (Amballa), India. Indian Muhammadan. Demonstrator, MacLagan Engineering College, Lahore, India. B.Sc. (Chemistry), Punjab University. Desirous of being in touch with the recent work in Chemistry. (*Signed by*) S. D. Muzaffar, S. J. Kohli, Edwin Theodore Dean.

THOMAS, MARY BEATRICE, Girton College, Cambridge. Lecturer in Chemistry and Director of Studies in Natural Sciences. Lecturer in Chemistry, Girton College, Cambridge. (*Signed by*) W. J. Pope, F. G. Hopkins, A. Hutchinson.

TIMMS, ERIC SPENCER, 96, Grange Park Rd., Thornton Heath. Research Student (Chemistry). B.Sc. (London), Honours Chemistry. Research Student at East London College under Dr. D. C. Jones. (*Signed by*) J. R. Partington, Elwyn Roberts, D. C. Jones, E. E. Turner.

TITTERINGTON, ERIC, Abdine Palace, Cairo, Egypt. British. Private Chemist to H.M. the King of Egypt. Member of the Pharmaceutical Society of Great Britain. Engaged in the examination of food and all drugs used in the household of His Majesty. Attached to the Medical Staff of His Majesty for Physiological work. Appointed Examiner in Chemistry to the Cairo Medical School, 1924. (*Signed by*) Ayerst Henham Hooker, W. Morris Colles, C. S. Gibson.

TUDHOPE, THOMAS MARTIN AITKEN, 8, Anson Road, Tufnell Park, London, N. 7. British. Temporary Assistant Chemist in the Government Laboratory. B.Sc. (St. Andrews), with Special Distinction in Chemistry. Ph.D. (St. Andrews). Carnegie Research Scholar for two years (sessions 1921-1923). Engaged in Chemical Research at University College, Dundee, for three years. "Optically Active  $\beta$ -Phthalimino- $\beta$ -phenylpropionophenones," McKenzie and Tudhope, *J.C.S.*, 1924, 125, 923. (*Signed by*) Robert Robertson, Geo. Stubbs, J. J. Fox.

VASS, CHARLES CYRIL NORREY, "Holmleigh," Harboro' Rd., Kingsthorpe, Northampton. British. Student. B.Sc. Ordinary (Leeds, 1924). (*Signed by*) C. K. Ingold, P. K. Dutt, W. A. Wightman, H. M. Dawson, R. Whytlaw-Gray.

VILLAGE, JOHN HARRY, 61, Broxholme Lane, Doncaster. British. Chemist. B.Sc. Hons. (Lond.). For 5 years engaged as Assistant Chemist by the Koppers' Coke Oven Co. under G. E. Foxwell, M.Sc., A.Inst.P., F.C.S. Here I have assisted in numerous researches on coal and its by-products. Now in charge of Laboratory. (*Signed by*) G. E. Foxwell, P. G. Mander, G. D. Crosley.

VOGEL, ISRAEL, 16, Wellclose Square, London, E. 1. Research Student in Chemistry at the East London College. B.Sc., 1st Class Honours Chemistry. Neil Arnott Scholar and Bronze Medallist in Chemistry of the University of London. Author of "The Constitution of the Thionic Acids," *Chem. News*, 128, 325-327, 342-345, 361 (1924). (*Signed by*) J. R. Partington, E. E. Turner, D. C. Jones.

WILSON, JOHN, 115, Canterbury Rd., North Harrow. British. Student engaged in Biochemical Research, Imperial College of Science and Technology, M.Sc. (Sheffield). (*Signed by*) S. B. Schryver, Harold Mastin, J. Knaggs.

WALKER, NELLIE, 15, Fintry Place, Broughty Ferry, Forfarshire. Lecturer in Chemistry, University College, Dundee (University of St. Andrews). M.A., B.Sc., Ph.D. (St. Andrews). Conjoint author of the following papers in the Journal of the Chemical Society: *J.C.S.*, 1914, 105, 1131; *J.C.S.*, 1915, 107, 1685; *J.C.S.*, 1922, 121, 349; *J.C.S.*, 1923, 123, 2875. (*Signed by*) Alex. McKenzie, J. C. Irvine, John S. W. Boyle.

WARD, WILLIAM JOSEPH VICTOR, 41, Marlowe Rd., Cambridge. English. Research Student. 1st Class Natural Sciences Tripos, Part II, Chemistry 1924, Cambridge. (*Signed by*) W. J. Pope, W. G. Palmer, W. H. Mills.

WHIPP, JAMES EWART, 15, St. John's St., Longsight, Manchester. Pharmacist. Student of the Institute of Chemistry. Fellow of the Biochemical Society. Fellow of the Royal Microscopical Society. Member of the Society of Chemical Industry. (*Signed by*) Henry Garnett, Harry Brindle, Chas. Turner.

WHITEHEAD, ALAN DOUGLAS, "Trevorian," 90, West Hill, Putney, S.W. 15. British. Chemist. Student in Dept. of Chemistry, University College, London, Sessions 1921-22, 1922-23, 1923-24. B.Sc. (Lond.), Honours in Chemistry. (*Signed by*) F. G. Donnan, A. Groeves, W. E. Garner.

WILLIAMS, LESLIE THOMAS DOUGLAS, 23, Queen's Gate Gardens, S.W. 7. British. Student. Associateship of the Royal College of Science. I am now performing research at the above college and am desirous of keeping abreast with modern progress in science. (*Signed by*) G. A. R. Kon, M. A. Whiteley, H. L. Riley.

WYLDE, JOHN HENRY, 203, Boleyn Rd., Forest Gate, E. 7. English. Asst. Chemist, Laboratory of the Gas Light and Coke Coy, Stratford Station. Student at the East Ham Tech. College. National Cert. in Chemistry, Part-time Course, Higher or Advanced (distinction Inorganic Chemistry). City and Guilds of London, Gas Engineering, Ordinary and Honours. (*Signed by*) E. W. Griffiths, W. H. Barker, W. T. Clough.

YARSLEY, VICTOR EMMANUEL, The View, Highfield, Chasetown, nr. Walsall. British. Salter Research Fellow, 1924. B.Sc., 1st Hons., School of Chemistry, B'ham. Associate of the Institute of Chemistry. (*Signed by*) G. T. Morgan, H. D. K. Drew, C. E. Wood.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2).

NAIR, SADASHIV PARASHURAM, Nair Building, Lamington Road, Bombay. Indian (British subject). Pharmaceutical Chemist, i/o Powell's Pharma-

ceutical and Chemical Laboratory. Ph.G. (Boston). Graduate of the Massachusetts College of Pharmacy, Boston, Mass. Member of the American Pharmaceutical Association. At present working on finding out the commercial utility of some of the indigenous plants. My aim in joining the Society is to come in contact with the members of the Society and enjoy the privileges given by the same. (*Signed by*) H. B. Tilden.

SAN, MOUNG BA, B.A., 3, Stewart Road, Rangoon, Burma. Burmese. Assistant to the Chemical Examiner to the Government of Burma and Demonstrator in Physics and Chemistry at the Burma Government Medical School, Rangoon. Graduate of Calcutta University (1911-12). Winner of Chemistry Prize (term 1911-12) in the then Govt. College, Rangoon, now the Rangoon University College. No publications yet. 11 years' analytical experience in the Chemical Examiner's Laboratory, comprising examination of Mineral Oils, Drugs, Foodstuffs, Public Water supplies, and also Toxicological and Medico-legal analysis as well as Analysis of Ores, Minerals, and other commodities. (*Signed by*) Thein Kin, William Dallas.

# PROCEEDINGS

OF THE

## CHEMICAL SOCIETY.

Ordinary Scientific Meeting, Thursday, February 5th, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., President, in the Chair.

The following were formally admitted Fellows of the Chemical Society: E. Lakeman, W. Kilroy, D. McKie, R. F. Barnes, and S. Krishnamurti.

Certificates were read for the first time in favour of:

- Niels Janniksen Bjerrum, Vendersgade 28, Copenhagen.  
James Herbert Clegg, West Cliffe, Queens Park Road, Burnley.  
Horace Cecil Cockroft, B.Sc., A.I.C., 6, Highfield Terrace, Halifax.  
Francis Xavier Coyne, 160, Addison Street, Blackburn.  
Robin George Westbury Farnell, A.R.C.S., A.I.C., Exeter College, Oxford.  
Richard Randolph Garran, B.Sc., Orphir, St. George's Road, Toorak, Melbourne.  
James Francis Halpin, F.I.C., 39, Benson Road, Forest Hill, S.E. 23.  
John Stanley Heaton, Ph.D., B.Sc., 43, Birch Road, Crumpsall, Manchester.  
John Cyril Hensman, M.A., A.I.C., Aldenham School, Elstree.  
Horace William Hughes, B.Sc., 27, Ombersley Road, Balsall Heath, Birmingham.  
David Bret Jehu, M.Sc., 34, High Street, Welshpool, Montgomeryshire.  
Clifford Merton Jones, B.Sc., Buxton Crescent, Newton Hill, Wakefield.  
David McDowall, 2, Kennishead Road, Thornliebank, Glasgow.  
Richard Alan Morton, B.Sc., Ph.D., A.I.C., 2, Lumley Street, Garston, Liverpool.  
Frederick Wilson Moulds, Hill Crest, Villa Road, Nottingham.  
David Pomerantz, 15, Nottingham Place, Commercial Road, E. 1.  
Robert Joseph Salmon, M.Sc., Holly Bank, Rowton, Chester.  
Tairain Singh Prem Chandra Sharma, M.Sc., Engineering College Hostel, Hindu University, Benares, India.  
John Robert Shepherd, M.Sc., A.I.C., Lady Hall Farm, Broughton-in-Furness.  
Leslie John Walker, 45, Devereux Road, Wandsworth Common, S.W. 18.  
William Alexander Waters, B.A., 35, Shirley Road, Cardiff.  
James Bernard Watson, 30, Mulgrave Road, West Hartlepool.

The following papers were read :

- "The chemistry of petroleum. Part I. The occurrence of compounds of sulphur in the light distillate from the crude oil of Maidan-i-Naftun." By S. F. BIRCH and W. S. G. P. NORRIS.
- "The chemistry of the three-carbon system. Part IV. A case of retarded mobility." By G. A. R. KON and R. P. LINSTAD.
- "Alternation in the molecular volumes of the normal monobasic fatty acids." By W. E. GARNER and E. A. RYDER.

Ordinary Scientific Meeting, Thursday, February 19th, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society through the death of Dr. Horace T. Brown on February 6th, and announced that the Council had passed the following resolution :

"On behalf of the Chemical Society the Council desires to express its sense of the great loss the Society has sustained in the death of Dr. Horace T. Brown, who served on the Council as Vice-President, Ordinary Member of Council, Treasurer, and Foreign Secretary during a period of twenty years, and offers to his son and daughters deep sympathy in their bereavement."

Certificates were read for the first time in favour of :

- Janardhana Ram Bhatt, B.A., Sre Sumangala College, Panadura, Ceylon.
- Archibald Beresford Blunsden, The Bungalow, Westbury-on-Trym, Bristol.
- Thomas Henry Bowles, Allandale, Meadows Road, Cheam.
- William Harrison Brindley, M.C., M.A., M.Sc.Tech., A.I.C., 11, Millmoor Terrace, Glossop.
- Thomas James Elijah Gardner, 12, Bushwood Road, Kew.
- Helen Simpson Gilchrist, 82, North Street, St. Andrews.
- Frederick Denison Maurice Hocking, M.Sc., A.I.C., 18, Woodside Park Road, N. Finchley, N. 12.
- Joseph Taylor Jackson, B.Sc., 192, Algernon Road, Lewisham, S.E. 13.
- Ernest Edward Mabbott, B.Sc., 358, Fore Street, Edmonton, N. 9.
- Edgar Kent Palmer, B.Sc.Tech., Rose Bank, Victoria Road, Hale, Cheshire.
- John Brent Reed, B.Sc., A.I.C., 49, St. Mildred's Road, S.E. 12.
- George James Robertson, M.A., B.Sc., Ph.D., The Manse, Stratkinness St. Andrews.
- Leonard William Ernest Townsend, 35, Harewood Road, Collier's Wood, Merton, S.W. 19.
- Edwin John Woodcock, Stonecot, Claremont Hill, Jersey.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2) :

- James Munsie Bell, Department of Chemistry, University of North Carolina, Chapel Hill, N.C., U.S.A.
- John Cameron, Peking Union Medical College, Peking, Chihli, N. China.
- Gordon McIntyre, B.Sc., Sarnia, Ontario, Canada.

Dr. B. Flürschheim and Dr. S. Sugden were elected Scrutators, and a ballot for the election of Fellows was held. The following were subsequently declared elected as Fellows :

- |   |  |
|---|--|
| Julius Nicholson Ashley, B.Sc., A.I.C.            | Jacob Kracovski, B.Sc.                             |
| George Alfred Bartram, B.Sc., A.I.C.              | Herbert Lambourne, M.A., M.Sc., F.I.C.             |
| George Harry Beeby, B.Sc., A.I.C.                 | John Joseph Laws.                                  |
| Arthur Henry Burdick Bishop.                      | Raymond James Wood Le Fevre.                       |
| Vincent Bloomer, B.Sc.                            | Alexander John Simpson Leiper, A.R.C.S.            |
| Claude McClellan Bottomley, B.Sc.                 | Alfred James Andrew Lennane, M.R.C.S., L.R.C.P.    |
| Frederick Stanley Brown, B.Sc., A.I.C.            | Frederick William Liley.                           |
| Percy Chorley, M.Sc.                              | James Gilbert Lunt, B.Sc.                          |
| Herbert Isaac Coombs, B.A., B.Sc.                 | William Hamilton McVicker, M.Sc.                   |
| Alexander Steven Corbet, Ph.D., B.Sc., A.I.C.     | Thomas Mann.                                       |
| William Houghton Crowe.                           | Vincent Mark Mascarenhas, B.A.                     |
| Alfred Davidson, B.Sc.                            | Frank Douglas Miles.                               |
| Ernest James Davis.                               | Sadashiv Parashuram Nair, Ph.G.                    |
| Walter Mark Duffin, B.Sc., A.R.C.S.               | Edward Arthur Nightingale.                         |
| Arthur Hynard Durrant.                            | Frederick William Offord.                          |
| Frederick John Eaton, Ph.D., B.Sc., A.I.C.        | Lionel Edward Outridge, B.Sc.                      |
| George Alfred Edwards, B.A., B.Sc.                | Thomas Webster Parker, A.R.C.S.                    |
| Harry Julius Emeléus, B.Sc., A.R.C.S.             | William Bayley Parker, F.I.C.                      |
| Ralph Margrave Esdaile.                           | Stuart Russell Parsons, B.Sc., A.I.C.              |
| Edward Hugh St. Clair Flack, M.Sc.                | William Samuel Payne.                              |
| Henry Bell Footner, B.Sc.                         | Kenneth John Pierson.                              |
| Desmond Geoghegan.                                | Richard Edwin Pike, B.Sc.                          |
| Clifton William Gibby, B.Sc., A.I.C.              | Douglas Victor Plumbridge, Ph.D., A.R.C.S., A.I.C. |
| Reginald Oswald Gibson, B.Sc., A.I.C.             | John Massey Preston, B.Sc., A.I.C.                 |
| Conrad Theodore Gimingham, F.I.C.                 | Richard Raper, B.A.                                |
| Jonathan Goodspeed.                               | John Frederick James Rule, B.Sc.                   |
| Richard Greenhalgh, B.Sc.                         | Moung Ba San, B.A.                                 |
| Robert Owen Griffith, M.Sc., A.I.C.               | Leslie Vivian Donald Scolah, B.Sc., A.I.C.         |
| Anthony James Hailwood, B.Sc.                     | George Frederick Sheppard.                         |
| Edward Stanley Hiscocks, B.Sc.                    | Joseph Thomas Shevlin.                             |
| Herbert Henry Hodgson, M.A., Ph.D., B.Sc., F.I.C. | Arthur Frederick Smethurst.                        |
| David Hughes.                                     | Ethel Minnie Snewing, B.Sc.                        |
| Kathleen Harriet Hughes.                          | Alton Ewart Clarence Smith.                        |
| Arthur Frederick Hunt, B.Sc.                      | Susanne Mabel Lavinia Snelus, A.I.C.               |
| Bertram Hobart Ingham, B.Sc.                      | Claude Hyman Spiers, M.A., Ph.D., B.Sc.            |
| John Dobney Johnson, B.Sc.                        | Harold Jacob Stern, Ph.D., B.Sc.                   |

The following paper was read :

- "The nature of the alternating effect in carbon chains. Part II. The directing influence of the  $\alpha$ -methoxyvinyl group in aromatic substitution." By C. K. INGOLD and E. H. INGOLD.  
 Dr. T. SLATER PRICE discussed "The action of light on the photographic plate."

### ANNUAL GENERAL MEETING.

The Annual General Meeting will take place on Thursday, March 26th, 1925, at 4 p.m., when the PRESIDENT, Professor W. P. WYNNE, D.Sc., F.R.S., will deliver his Address.

### ANNIVERSARY DINNER.

The Anniversary Dinner will be held in the Grand Hall of the Hotel Victoria, Northumberland Avenue, W.C.2., on Thursday, March 26th, 1925 (the day of the Annual General Meeting), at 7 for 7.30 p.m. The presence of ladies will be welcomed.

Tickets, price 12s. 6d. each (including gratuities to waiters) can be obtained from the Assistant Secretary. It will facilitate arrangements if Fellows will apply for tickets at an early date, in any event before March 19th.

List of Papers, or Abstracts thereof, received between January 16th and February 19th, 1925. (This list does not include the titles of papers which have been read at a Scientific Meeting, or which have appeared in the Journal.)

"Colour and molecular geometry. Part III. A graphical presentation of the theory." By J. MOIR.

"Tesla-luminescence spectra. Part V. Some polynuclear hydrocarbons." By W. H. McVICKER, J. K. MARSH, and A. W. STEWART.

"The surface tensions of aqueous solutions of various organic compounds." By P. R. EDWARDS.

- "The cryoscopic method for adsorption." By H. L. RICHARDSON and P. W. ROBERTSON.
- "Ring-chain tautomerism. Part XII. Derivatives of  $\alpha$ -ethyl- $\beta\beta$ -dimethylglutaric acid." By G. A. R. KON, L. F. SMITH, and J. F. THORPE.
- "A determination of the melting and transition points of potassium dichromate." By P. L. ROBINSON, G. E. STEPHENSON, and H. V. A. BRISCOE.
- "Interaction of hydrogen and carbon dioxide on the surface of platinum." By C. R. PRITCHARD and C. N. HINSHELWOOD.
- "The identity of uncineol with eudesmol." By A. R. PENFOLD.
- "Further X-ray measurements on long-chain compounds ( $n$ -hydrocarbons)." By A. MÜLLER and W. B. SAVILLE.
- "An X-ray investigation of the ketone series." By W. B. SAVILLE and G. SHEARER.
- "The relationship of thyroxin to tryptophane." By C. S. HICKS.
- "A new method of flame analysis." By O. C. DE C. ELLIS and H. ROBINSON.
- "The movement of flame in closed vessels." By O. C. DE C. ELLIS and R. V. WHEELER.
- "*cyclo*Telluropentanediones containing aliphatic and aromatic substituents." By G. T. MORGAN and C. J. A. TAYLOR.
- "3-Chlorobenzopyrylium derivatives." By L. R. RIDGWAY and R. ROBINSON.
- "A qualitative test for weak bases." By R. ROBINSON.
- "The labile nature of the halogen atom in organic compounds. Part X. The action of hydrazine hydrate on the halogen derivatives of  $\alpha$ -nitro-fatty acids." By A. K. MACBETH and D. TRAILL.
- "The effect of colloids on the replacement of lead and copper from their salts by zinc." By L. T. M. GRAY.
- "A new portable apparatus for the analysis of illuminating and other gases." By H. D. MURRAY.
- "The action of halogen on phenylhydrazones. Part II. The action of chlorine." By J. E. HUMPHRIES, H. HUMBLE, and R. EVANS.
- "Anomalous adsorption." By J. B. SPEAKMAN and A. E. BATTYE.
- "The photo-decomposition of chlorine water and of aqueous hypochlorous acid solutions. Part I." By A. J. ALLMAND, P. W. CUNLIFFE, and R. E. W. MADDISON.
- "Studies of dynamic isomerism. Part XVII. The mutarotation of aluminium benzoyl-camphor." By I. J. FAULKNER and T. M. LOWRY.

- "Studies of dynamic isomerism. Part XVIII. The mechanism of mutarotation and of hydrolytic and prototropic change; with a criticism of Baker, Ingold, and Thorpe's doctrine of non-intervention." By T. M. LOWRY.
- "Studies of dynamic isomerism. Part XIX. Experiments on the arrest of mutarotation in tetramethylglucose." By T. M. LOWRY and E. M. RICHARDS.
- "The freezing points of hydrofluoric acid." By J. D. C. ANTHONY and L. J. HUDLESTON.
- "The hydrolysis of iodine as measured by the iodine electrode." By H. D. MURRAY.
- "Some aromatic chlorovinylarsines." By A. F. HUNT and E. E. TURNER.
- "The mechanism of the reaction between arylhydrazine sulphonic acids and acetoacetic ester." By G. REEVES.
- "The compounds formed by the action of bromine upon benzaldehyde-phenylhydrazine." By F. D. CHATTAWAY and A. J. WALKER.
- "Periodic electrochemical phenomena." By E. S. HEDGES and J. E. MYERS.
- "The nitration of meta-hydroxybenzaldehyde carbonate and ethyl carbonate." By F. A. MASON.
- "A synthesis of 1 : 2-dihydroquinaldine." By F. A. MASON.
- "The synthesis of 5 : 5'-dibromo-6 : 6'-dimethoxy thioindigo." By R. H. GRIFFITH and E. HOPE.
- "The interaction of sodium chloride and alumina." By F. H. CLEWS.
- "A resolution of benzoin." By F. J. WILSON and I. V. HOPPER.
- "Semicarbazones of benzoin. Part I." By I. V. HOPPER.
- "The 'activation' of graphite as a sorbent of oxygen." By D. H. BANGHAM and J. STAFFORD.
- "The mechanism of the formation of malachite from basic cupric carbonate." By J. R. I. HEPBURN.
- "A synthesis of oxyberberine. Part I." By W. H. PERKIN, J. N. RÂY, and R. ROBINSON.
- "Variation of colour in the fluoresceine family." By J. MOIR.
- "The equilibria underlying the soap boiling processes. Pure sodium palmitate." By J. W. MCBAIN and G. M. LANGDON.
- "Some reactions of triethylphosphine." By J. N. COLLIE.
- "Nitro- and amino-ethoxy-lutidine." By J. N. COLLIE and G. BISHOP.

# PROCEEDINGS

## OF THE

### CHEMICAL SOCIETY.

Lecture, held in the Lecture Hall of the Institution of Mechanical Engineers, Storey's Gate, Westminster, S.W. 1, on Thursday, February 26th, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., President, in the Chair.

Sir WILLIAM HARDY, M.A., Sec.R.S., delivered his Lecture entitled: "Problems presented by Films on Solid Surfaces." A vote of thanks to the Lecturer, proposed by Professor H. E. Armstrong, F.R.S., seconded by Professor A. V. Hill, F.R.S., and supported by the Chairman, was carried with acclamation, and acknowledged by Sir William Hardy.

Ordinary Scientific Meeting, Thursday, March 5th, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of the following Fellows:

	Elected.	Died.
Sir Edward Thorpe .....	Feb. 16th, 1871.	Feb. 23rd.
Alexander Mitchell Williams .....	Dec. 7th, 1922.	Feb. 21st.

The PRESIDENT also announced that at a Special Meeting of the Council, held on February 26th, 1925, the following resolution was passed:

"On behalf of the Chemical Society, the Council desires to express its profound regret at the death of Sir Edward Thorpe, who for 54 years was a Fellow, and during 39 years served the Society as Member of Council, Vice-President, Treasurer and President, and while Treasurer initiated and supervised the production of the first three volumes of the Collective Indexes of the Society's Journal.

"The Council recognises that by Sir Edward Thorpe's death the

Society loses a wise counsellor and British Chemistry a distinguished investigator, and offers to Lady Thorpe its sincere sympathy in her bereavement."

The Fellows present expressed their concurrence in this resolution by rising from their places.

It was also announced that

(1) With a view to increasing the usefulness of the Library, the Council has made arrangements for the photographic copying by means of the Photostat, of material contained in the Library. Particulars as to cost, etc., can be obtained from the Librarian.

(2) The first lecture in connection with the Fison Memorial Fund, which was established to endow a Lectureship in memory of the late Dr. A. H. Fison, will be delivered by Professor J. J. Thomson, O.M., F.R.S., on Thursday, May 7th, 1925, at 5 p.m., the Right Hon. the Earl of Balfour presiding. The place of meeting will be announced later. Tickets of admission will be obtainable from Mr. S. E. Carr.

The following List of Nominations for vacant places on the Council was read from the Chair :

President : Arthur W. Crossley.

Vice-Presidents who have filled the office of President (3 vacancies) : H. E. Armstrong, A. Scott, W. P. Wynne.

Vice-Presidents who have not filled the office of President (2 vacancies) : J. B. Cohen, N. V. Sidgwick.

Secretary : T. Slater Price.

Foreign Secretary : F. G. Donnan.

Ordinary Members of Council :

(a) Town Members, *i.e.*, those resident within 50 miles of Charing Cross (5 vacancies) : H. Bassett, F. W. Gamble, J. Kenyon, B. D. Porritt, G. Stubbs.

(b) Country Members, *i.e.*, those resident beyond 50 miles from Charing Cross (2 vacancies) : F. A. Freeth, W. Rintoul, F. J. Wilson.

Dr. P. W. Austin and Dr. E. E. Turner were appointed Scrutators to assist in the counting of votes recorded in the election of the Country Members of Council.

The following were formally admitted Fellows of the Chemical Society : F. H. Banfield, F. Kenyon, A. H. Durrant, A. F. Smethurst, J. D. Johnson, R. E. Pike, C. H. Spiers, S. Dutt, J. Kracovski, H. J. Emeléus, I. Vogel, K. V. Thimann, S. S. G. Sircar, B. T. Narayanan.

The Treasurer drew attention to the fact that on Thursday, March 5th, 1885, exactly 40 years ago, a certificate of a candidate for election as a Fellow was read for the first time in favour of William Palmer Wynne. Commenting on the uniqueness of the occasion, the Treasurer expressed the hope that the President would long be spared to give the Society the benefit of his wise counsel. The meeting showed its hearty approval of the Treasurer's remarks, and the President expressed his sincere thanks for the kind reference.

Certificates were read for the first time in favour of :

Geoffrey Alger Blyde, East Cliffe, East Bank Road, Sheffield.

Frank Henry Charles Bull, B.Sc., A.I.C., 50, Cornwall Road, Bishopston, Bristol.

Harry Dean, 134, New Lane, Oswaldtwistle.

Irvine John Faulkner, Emmanuel College, Cambridge.

Thomas Flett, B.Sc., A.I.C., Anchor Cottage, Kirkwall, Orkney.

John Charles Giblin, B.Sc., A.I.C., 3, Kensington Terrace, Brecon.

Isabel Hodgson Hadfield, M.Sc., 65, Langham Road, Teddington.

Thomas Haworth, 8, Park Terrace, Fielding Lane, Oswaldtwistle.

William Jobson, 52, The Mall, Swindon.

Thomas William Jones, B.Sc., 36, St. Vincent Road, Westcliff-on-Sea.

John Keane, M.Sc., Ph.D., 6 Shamrock Villas, Drumcondra, Dublin.

Andrew Joseph Myles, 12, Gardner Road, Tue Brook, Liverpool.

Alfred William Nash, B.Sc., 18, Prospect Road, Moseley, Birmingham.

Henry Bowen Oakley, M.Sc., A.R.C.S., Wellcome Tropical Research Laboratories, Khartoum.

Harry Rawlings, B.Sc., 15, Station Road, Ramsey, Huntingdon.

Alan Lawrence Smith, M.Sc., 22, Dean Street, Blackpool.

George Thorn, B.Sc., Grove House, Beechen Grove, Watford.

Ernest Swann Watts, Eaglesfield, Limefield Road, Kersal, Manchester.

Archibald Steele Whamond, 22, Church Street, Alloa.

John Stanley Worthington, 27, Rowena Street, Great Lever, Bolton.

The following papers were read :

"Studies of dynamic isomerism. Part XVII. The mutarotation of aluminium benzoylcamphor." By I. J. FAULKNER and T. M. LOWRY.

"Studies of dynamic isomerism. Part XVIII. The mechanism of mutarotation, and of hydrolytic and prototropic change; with a criticism of Baker, Ingold, and Thorpe's doctrine of non-intervention." By T. M. LOWRY.

"Studies of dynamic isomerism. Part XIX. Experiments on the arrest of mutarotation in tetramethylglucose." By T. M. LOWRY and E. M. RICHARDS.

Ordinary Scientific Meeting, Thursday, March 19th, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through the death of Joseph Arderne Ormerod, who was elected a Fellow on May 16th, 1872, and died on March 5th.

R. H. Purcell was formally admitted a Fellow of the Chemical Society.

Certificates were read for the first time in favour of :

James Lindsay Buchan, B.Sc., Hampden Club, N.W. 1.  
 John Alfred Valentine Butler, M.Sc., The Potteries, Winchcombe, Glos.  
 Annie Lavinia Byford, B.Sc., 73, Elderton Road, Westcliff-on-Sea.  
 James Craik, M.A., B.Sc., Ph.D., The University, St. Andrews.  
 Herbert Greetham Dane, M.Sc., The Diocesan Training College, Winchester.  
 Margaret Stedman Leonora Dixon, Homebush, Worcester Road, Sutton.  
 Donald Hanson, 7, Willow Bank, Halifax.  
 Joseph Hill, 58, Spring Street, Accrington.  
 Jim Hoyle, 11, Crow Lane, Ramsbottom.  
 Richard H. F. Manske, M.Sc., The University, Manchester.  
 Hugh Clonston Moir, B.Sc., A.I.C., 7, Craigielea Street, Dennistoun, Glasgow.  
 William George Rhodes, 318, Granville Road, Park, Sheffield.  
 Thomas Kennedy Walker, M.Sc., Ph.D., F.I.C., 4, Swythamley Road, Cheadle Heath, Stockport.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2) in favour of :

Karl Thomas, M.D., The University, Leipzig.  
 Frederic N. Williams, P.O. Box 1117, Shreveport, La., U.S.A.

The following papers were read :

- "The 'activation' of graphite as a sorbent of oxygen." By D. H. BANGHAM and J. STAFFORD.
- "Ring-chain tautomerism. Part XIV. The structure of Balbiano's acid." By E. ROTHSTEIN, A. STEVENSON, and J. F. THORPE.
- "The tendency towards intramolecular condensation in cyclic keto-esters. Part I. The formation and disruption of bicyclic dihydroresorcinols." By E. H. FARMER and J. ROSS.
- "The structure of the enolic forms of  $\beta$ -ketoesters and  $\beta$ -diketones." By N. V. SIDGWICK.

### PUBLICATIONS FUND.

In connection with the Appeal for the Publications Fund issued by the Treasurer, it has been decided that a list of donations and subscriptions received shall appear in the Proceedings for June. All donations and subscriptions received prior to the end of May will be included in the List.

## LIST OF FELLOWS, 1925.

It has been decided to print the List of Fellows for 1925 and to supply the List to those Fellows who make application to the Assistant Secretary by the 31st July, 1925.

List of Papers, or abstracts thereof, received between February 19th and March 19th, 1925. (This List does not include the titles of papers which have been read at a Scientific Meeting, or which have appeared in the Journal.)

- "The isomerism of the oximes. Part XXI. Action of picryl chloride and of 2:4-dinitrochlorobenzene on aldoximes." By O. L. BRADY and L. KLEIN.
- "Derivatives of semioxamazide. Part III." By F. J. WILSON and E. C. PICKERING.
- "The stereochemistry of the hydronaphthalenes and related sesquiterpenes. Part I. Decahydro- $\beta$ -naphthoic acid." By F. W. KAY and N. STUART.
- "Irregularities in the condensation of certain nitriles with resorcinol." By E. CHAPMAN and H. STEPHEN.
- "Studies in the benzothiazole series. Part III. The pseudobases of the *l*-substituted benzothiazole quaternary salts." By L. M. CLARK.
- "Sulphur compounds removed from a Persian petroleum by means of sulphuric acid. Part I." By E. H. THIERRY.
- "Ring-chain tautomerism. Part XIII. Three carbon ring-chain tautomerism in a bridged ring system." By J. W. BAKER.
- "The measurement of the dielectric constants of liquids." By H. HARRIS.
- "Note on the physiological action of certain benzothiazoles and mercaptan derivatives." By R. F. HUNTER.
- "Note on the physiological action of certain arylamino-derivatives of monochloroacetic acid." By R. F. HUNTER.
- "The hydrolytic properties of certain amino-acids." By L. P. BOSMAN.
- "The reduction of anethole nitrosochloride." By J. B. SHOESMITH and R. H. SLATER.
- "Investigations on the dependence of rotatory power on chemical constitution. Part XXV. Three optically active alcohols containing a phenyl group and some esters derived therefrom." By L. F. HEWITT and J. KENYON.
- "The integral relations between the vibration frequencies of molecules." By E. C. C. BALY, R. A. MORTON, and E. ROGERS.

- "The photochemical decomposition of nitrosyl chloride." By E. J. BOWEN and J. F. SHARP.
- "Ray's supposed triethylene trisulphide." By G. M. BENNETT and W. A. BERRY.
- "Hepta- and nono-dilactones." By G. M. BENNETT.
- "A synthesis of pyrylium salts of anthocyanidin type. Part VI. Polyhydroxyflavylium salts related to chrysin, apigenin, loto-flavin, luteolin, galangin, fisetin, and morin." By D. D. PRATT and R. ROBINSON.
- "Reactions depending upon the vapour at the interface of two immiscible liquids. Part II." By G. HARKER and R. K. NEWMAN.
- "The hydrates of calcium carbonate." By J. HUME.
- "The labile nature of the halogen atom in organic compounds. Part XI. The halogenation of acetylsuccinic ester." By A. K. MACBETH and D. TRAILL.
- "A solid hydride of antimony." By E. J. WEEKS and J. G. F. DRUCE.
- "A study of the effect of the concentration of aqueous sodium hydroxide solutions upon the rate of saponification of olive oil." By G. I. FINCH and A. KARIM.
- "The formation of *d*-2:2:4-trimethylcyclohexan-3-one-1-carboxylic acid from *d*-camphorquinone." By C. S. GIBSON and J. L. SIMONSEN.
- "The reaction between aromatic aldehydes and phenanthraquinone in presence of ammonia." By A. C. SIRCAR and N. C. G. RAY.
- "Studies in heterocyclic compounds. Part I." By A. C. SIRCAR and P. K. DE.
- "The action of azides on toluquinone." By F. D. CHATTAWAY and G. D. PARKES.
- "The partial pressures of water vapour and of sulphuric acid vapour over concentrated solutions of sulphuric acid at high temperatures." By J. S. THOMAS and W. F. BARKER.
- "Investigations on the dependence of rotatory power on chemical constitution. Part XXVI. Four alcohols containing the vinyl group and some esters derived therefrom." By J. KENYON and D. R. SNELGROVE.
- "A synthesis of pyrylium salts of anthocyanidin type. Part VII. The preparation of the anthocyanidins with the aid of tri-acetylphloroglucinaldehyde." By D. D. PRATT and R. ROBINSON.
- "A synthesis of pyrylium salts of anthocyanidin type. Part VIII. A new synthesis of pelargonidin chloride and of galanginidin chloride." By T. MALKIN and R. ROBINSON.

- "The action of halogens upon *m*- and *p*-nitrobenzaldehyde phenylhydrazones." By F. D. CHATTAWAY and A. J. WALKER.
- "Plant cuticles. Part I. Modern plant cuticles. Studies in the composition of coal." By V. H. LEGG and R. V. WHEELER.
- "The explosion of ammonia with carbon monoxide and oxygen." By J. W. BEESON and J. R. PARTINGTON.
- "3 : 3-Diethylpentane (tetraethylmethane)." By G. T. MORGAN, S. R. CARTER, and A. E. DUCK.
- "Aromatic esters of acylecgonines." By W. H. GRAY.
- "The additive formation of four-membered rings. Part VII. The synthesis and division of some dimethylene-1 : 3-oxamines." By C. K. INGOLD.
- "The decomposition of hydrogen peroxide by cobaltic hydroxide." By F. G. TRYHORN and G. JESSOP.

# PROCEEDINGS

## OF THE

# CHEMICAL SOCIETY.

### ANNIVERSARY DINNER.

THE Anniversary Dinner of the Society was held in the Grand Hall, Hotel Victoria, on Thursday, March 26th, 1925, at 7 for 7.30 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., D.Sc., F.R.S., President, in the Chair. The following is a list of those present :

Aeschlimann, J. A.	Carr, Miss M.
Anderson, Rt. Hon. Sir John, G.C.B., <i>Permanent Under-Secretary of State for Home Affairs.</i>	Carr, S. E., <i>Assistant Secretary.</i>
Anderson, Miss O. R.	Chapman, A. Chaston, F.R.S.
Armstrong, H. E., F.R.S., <i>Past- President.</i>	Chapman, Mrs. Chaston.
Armstrong, Miss N.	Chapman, A. W.
Austin, P. C.	Chattaway, F. D., F.R.S.
Austin, Mrs. P. C.	<i>Chemical Age.</i>
Backer, H. J.	<i>Chemistry and Industry.</i>
Baker, H. B., C.B.E., F.R.S.	Clifford, E.
Baker, Mrs. H. B.	Clifford, F. W., <i>Librarian.</i>
Baly, E. C. C., C.B.E.	Coates, J. E., O.B.E.
Bassett, H.	Cod, L. M.
Bennett, Miss D. M.	Cohen, Ernst, <i>Nederlandsche Chemische Vereeniging.</i>
Bennett, J. C. S.	Cohen, Mrs. E.
Bennett, G. M.	Collins, S. W.
Bolton, E. R.	Cooper, A. J. Bullen.
Bolton, Mrs. E. R.	Cooper, H. Creemer.
Bolton, L. H.	Corfield, C. E.
Bolton, Mrs. L. H.	Corfield, Mrs. C. E.
Boyd, D. R.	Crossley, A. W., C.M.G., C.B.E., F.R.S., <i>President.</i>
Brady, O. L.	Crossley, Mrs. A. W.
Brewer, F. M.	Crossley, K. H.
Brown, R. B.	<i>Daily Telegraph.</i>
Brown, Mrs. R. B.	Dale, H. H., C.B.E., F.R.S.
Burch, W. J. N.	Desch, C. H., F.R.S.
Burgess, W. T.	Dickes, Miss W. E.
Burton, H.	Donald, M. B.
Carr, F. H., C.B.E.	Donnan, F. G., C.B.E., F.R.S., <i>Foreign Secretary.</i>
Carr, Mrs. F. H.	Donnan, Miss.

- Drew, R. B.  
 Druce, J. G. F.  
 Drummond, J. C.  
 Drummond, Mrs. M. H.  
 Dudley, H. W., O.B.E.  
 Dudley, Mrs.  
 Duncalfe, R.  
 Dunn, F. P.  
 Dyer, B.  
 Dyer, Mrs. B.  
 Eldridge, A. A.  
 Eldridge, Mrs. A. A.  
 Ellingham, H. J. T.  
 Fargher, R. G.  
 Fox, J. J., O.B.E.  
 Freeth, F. A., O.B.E.  
 Galletly, W. G.  
 Gardner, J. A.  
 Garner, W. E.  
 Gibbons, W. M., O.B.E., *Registrar, Sheffield University.*  
 Gibson, C. S., O.B.E., *Secretary.*  
 Gilling, C.  
 Gordon, J. G.  
 Gray, J. Hunter, K.C.  
 Gray, Mrs. J. Hunter.  
 Gray, W. H.  
 Greenaway, A. J.  
 Greeves, A.  
 Greeves, Mrs. A.  
 Gregory, Sir Richard.  
 Griffiths, O. S.  
 Haas, P.  
 Hamer, Miss F. M.  
 Hamer, J. C.  
 Hamer, Sir William.  
 Hamer, Lady.  
 Heath, Sir Frank, K.C.B., *Secretary, Department of Scientific and Industrial Research.*  
 Henderson, G. G., F.R.S., *President, The Institute of Chemistry.*  
 Henry, T. A.  
 Henry, Mrs. T. A.  
 Hewitt, J. T., F.R.S.  
 Heycock, C. T., F.R.S.  
 Hinkel, L. E.  
 Hinks, E., M.B.E.  
 Hinks, Mrs. E.

 Turner, Miss E. G.  
 Turner, G. W.  
 Turner, T., *President*, *The Institute of Metals*.  
 Voelcker, E.  
 Voelcker, E. W.  
 Voelcker, J. A.  
 Whiteley, Miss M. A., O.B.E.  
 Widdows, Miss S. T.  
 Woolcock, W. J. U., C.B.E., *President*,  
*The Society of Chemical Industry*.  
 Wynne, Miss D. P.  
 Wynne, W. P., F.R.S., *Past-President*.

After the loyal toasts had been honoured the President announced that he had had a telegram from Professors Bilmann, Bjerrum, Bohr, Brönsted, and Sørensen sending their hearty greetings and congratulations to the Society. This was received with acclamation.

The following is a list of the Toasts proposed :—

1. "His Most Gracious Majesty The King."
2. "Their Majesties the Queen and Queen Alexandra, His Royal Highness the Prince of Wales, and the other members of the Royal Family."

By Sir H. FRANK HEATH, K.C.B., Secretary of the Department of Scientific and Industrial Research :—

3. "The Chemical Society," coupled with the name of the President.

By Professor HENRY E. ARMSTRONG, LL.D., F.R.S., Past-President :—

4. "The Retiring President, Professor W. P. Wynne, D.Sc., F.R.S."

By Professor IRVINE MASSON, M.B.E., D.Sc. :—

5. "The Federated Societies," coupled with the name of W. J. U. Woolcock, Esq., C.B.E., President of the Society of Chemical Industry.

By Professor F. G. DONNAN, C.B.E., D.Sc., F.R.S., Foreign Secretary :—

6. "The Guests," coupled with the names of Professor Ernst Cohen, of Utrecht University (representing the Nederlandsche Chemische Vereeniging), and J. Hunter Gray, Esq., K.C., M.A.

Sir H. FRANK HEATH, K.C.B., in proposing the toast of "The Chemical Society," said :—

Mr. President, Ladies and Gentlemen, after I had accepted with some hesitation the invitation to address you this evening, and to propose this toast, I happened to be present at a public dinner where one of His Majesty's Judges said that after considerable experience of speeches of the kind he had come to the conclusion that most proposers of toasts began by explaining how unfitted they were for the task entrusted to them, and spent the rest of the time in proving it. Well, Ladies and Gentlemen, after that opinion from the Bench, there is nothing left for me but to throw myself on the mercy of the court.

I do, indeed, feel it to be a very great honour that a great scientific society like this should ask to have the principal toast of the evening proposed by a layman. You are not only a focus of research in pure science, you not only have a membership of 4,000 Fellows, but I see at these tables to-night inorganic and organic chemists, analytical and physical chemists, and not least of all, perhaps, biochemists. I won't suggest that the specialisation which is obviously taking place in your ranks has gone quite as far as the young American medical student of whom Dr. Howe told us in Philadelphia last autumn, who announced his intention of specialising in the ear, but had not made up his mind whether it was to be the right ear or the left. But specialisation there certainly is. Indeed, the foundation of the Society was an act of specialisation in 1841; when the Royal Society was first founded, I find from those

interesting records in *Nature* that the discussions ranged quite easily from naval architecture to the distillation of charcoal, from the anatomy of animal intestines to the discussion of a new digester for the brewing industry. Well, every one of those fields now has its own special society or societies. Specialisation must continue, I imagine, and increase, and yet to me as a layman I think there seems to be a movement in progress which must tend to counteract any disadvantages there might be from excessive specialisation; I mean the obvious tendency for different sciences to co-operate in the solution of the more difficult problems that are in front of you.

Professor Wynne, in his address this afternoon, referred to the Department with which I happen to be connected, and spoke of the share which chemists had undoubtedly had in the movement that led to the establishment of that Department. But I do not think that even you perhaps fully realise how close the link always has been, and I imagine always must be, between any organisation established to encourage scientific research and the chemists. Just look back. Professor Wynne's address was partly concerned in dealing with the review that Professor Meldola took before the war—I think in 1907—of the difficulties of the research worker in this country. Professor Meldola, a Past-President of this Society, was an original member of the Advisory Council of the Department of Scientific and Industrial Research and remained a member of that Council until his unfortunate death. Your new President, Dr. Crossley, is Director of Research to the largest Research Association for Industry that has come into existence since those difficult days of the war, the British Cotton Research Association, and that Association and Dr. Crossley are working in constant and continuous co-operation with the Department. Dr. Slater Price, another officer of this Society, is Director of the British Photographic Research Association; Sir Herbert Jackson, a former Vice-President, is Director of the Scientific Instrument Research Association; Dr. Pickard, a former member of your Council, is Director of the Leather Association; Dr. Scott, a Past-President, is a Director of the Laboratory established by the Department at the British Museum in order to study the best means of preserving antique objects of every kind; and finally there is your Treasurer, Professor Jocelyn Thorpe, who is to-day a member of the Chemistry Research Board of the Department and a member of many of its committees.

Now, my contact with all those distinguished men has made a double impression upon my mind. One is the adaptability of the chemist, and the other is his extraordinary power of penetration. Looking at the Research Association movement which I have

referred to already—incidentally there are twenty-four different industries which have organisations of this kind in this country, and the majority of the Directors of Research of those twenty-four Associations are chemists—I draw the conclusion that they must have great adaptability, because I happen to know that in many cases, and in some of the most outstanding cases, the chemists who have been called to those important posts knew nothing about the industry when they took up the appointment, and for that very reason have brought success. Professor Wynne told you this afternoon that those Associations have been useful because they have opened new posts to young men, and nothing could be more important than that. But I think he might possibly have added that these Associations have done more than that. I will tell you an experience of mine which explains. The other day I was in the largest textile mill in the world, and found that they have quite a large and busy research laboratory, and I was told that the reason that that laboratory had been established was because they had been so convinced of the value of research by the Association of which the firm was a member that they were determined to carry the matter further and have an organisation of their own within the works. That is going on all over the country; so that it is not merely if you look at it simply from the point of view of openings for young men—which after all is not the whole story—it is not merely that the Associations provide openings, but that in increasing measure the firms in the Associations as they come to realise the value of research will need the help of chemists and other men of science. And, sir, their power of permeation! Chemistry, it seems to me, has made its way already into almost every sphere of human life. You dictate to us, sir, what we are to eat, though I believe you are not entirely agreed as to the preservatives that should be used for our food; you give us new textiles to wear—or at least you give our wives new textiles to wear, and when we are ill you indicate to us, attracted as we are by the skilful advertisements of people who are out for that weakness of man that comes with illness, and you tell us where the medicines we are advised to take fail to come up to what they claim to be.

Now, sir, I could quite safely, with considerable safety, go on to tell you of the records of your great men who have been officers and Fellows of this Society. I could refer to the Central Library which you have established, which helps all the Societies connected with chemistry to have a nodal point from which they can gather their recorded information. I could speak of your research fund. I could tell you of the brave efforts you are making in spite of rising prices and a printers' strike to keep the publications going. But

if I did, I should only be telling you what you know far better than I do.

I am going to venture, sir, in view of the most excellent hospitality which you have offered me, and in view of the patience with which you, ladies and gentlemen, have listened to me up to the moment, I am going to venture to be bold, and to tell you how the present state of chemistry strikes a rank outsider.

I remember that when my brother-in-law, more than forty years ago, tried to teach me some chemistry, the molecule seemed to me a much more important thing than the atom. The atom, to my untutored mind, seemed a sort of axiom which you had to accept, but which compared with the interest of the molecule was a poor thing. Now I venture to think that possibly until comparatively recent times chemistry has concerned itself a good deal more with the molecule and its behaviour than with the atom. But is that condition going to last? The other night I heard a distinguished young biologist speaking of several sciences and claim as his belief that the central science of the future would be biology. He was prepared to take off his hat to physics and chemistry as important fundamentally, but the future lay with biology. One did not live in the cellars of a house, but in the upper storey. Well, as an outsider I am bound to say that I doubt that. To me, at any rate, and possibly to other people who are not chemists, chemistry seems to be taking increasingly a central position and bringing to its service the work, the tools, which other scientists on both sides of it are preparing. What has physics done recently from the point of view of chemistry? Has it not, by giving you the anatomy of the atom, and by revealing the structure of the space lattice, helped you to get a picture of three things—first, the mystery of chemical attraction, secondly, as Sir William Hardy, in his Bakerian lecture, pointed out, the phenomena presented by liquid and solid surfaces in close contact, and thirdly, the problem of catalysis. Those things are giving you, are they not, larger control over the speed and nature of reaction? But the engineer similarly is bringing in the tool of high pressure, and what will happen when the knowledge you already have, and these tools you already have, are brought to bear under the conditions of high pressure, it is very difficult to prophesy. And so you are forcing your way into the biological field. Another tool I fancy I see in your hands will be those mysterious accessory vitamins which link up your chemical work with those mysterious chemical reactions of the animal and vegetable organisms.

Well, sir, I have proved my incapacity for proposing this toast, and I will therefore ask you to drink to the health and future of the

Chemical Society, coupling with the toast the name of your President, Dr. Crossley.

Dr. ARTHUR W. CROSSLEY replied :—

I am sure the Society would wish me to thank you, Sir Frank Heath, very warmly for the way in which you have proposed this toast. My predecessor in this Chair has this afternoon answered, I think, fairly fully some of the remarks which you have made. He has expressed his appreciation of the efforts of the Department of Scientific and Industrial Research. Perhaps, as being somewhat intimately associated with that Department, I may be allowed to add one or two words. So far as my experience goes that Department is free from, shall we say, a Government monopoly—Red Tape, and is willing in every way possible to help anyone interested in the work it is doing. I have had some experience of the professional or professorial side of chemistry, and for the past five years I have had some experience of chemistry as applied to industry. I say, with full consideration of what I am saying, that in my opinion the Department has founded in the Industrial Research Associations a movement which is destined to play an all-important part in the future of this country. By no other means that I can conceive could science have been brought into those industries. I hope on some future occasion to speak somewhat more fully on this subject, and for the present, if you will not think it impertinent on my part, I should like to congratulate the Department on the big efforts which it has started and to say, "Don't be in the least discouraged by disparaging remarks that may be made about you."

I believe it is customary for the President on these occasions to make some reference to the affairs of the Society. This afternoon we had our Annual General Meeting, and by virtue of a decision arrived at, I find things weighing somewhat heavily on my shoulders. I refer to the decision which permits me to have the honour to occupy the position which I do at the present moment.

The election of one President, of necessity, means the retirement of someone who has occupied that post. It falls to more eloquent lips than mine to propose the toast of Professor Wynne this evening. I hope, however, that Professor Armstrong will forgive me if I say one or two words. When the time comes for Professor Wynne to apply for armorial bearings I would like to suggest that he take one single word for his motto, and that word is "Thorough." His sole aim has been efficiency, and in endeavouring to attain it he has not spared himself in the slightest degree. Few realise when he comes to a meeting and quietly says, "I think we should be well advised to do so and so," that this has possibly meant hours of thought, perhaps wrestling with the mystic language of charters and bye-

laws, perhaps the writing of numerous letters and documents. To do the right thing for the Society's welfare has been his sole object. I should like to speak on behalf of us all just one or two words to Professor Wynne. They are simple, but my long-standing friendship with him enables me to know, I think, that he will understand.

"Professor Wynne, we have learned to know something of the time, care and thought which you have expended on our behalf during the past two years. We appreciate; we are grateful."

The Chemical Society is rightly, in the opinion of its Fellows, a very exceptional and uncommon institution, indeed our forbears taught us to regard it as such. They did not found the Chemical Society of London, or England, or of Great Britain, they founded simply "the Chemical Society," and as such we are proud to regard it. We desire no addition: we ourselves are content to be chemists, without the added epithet of druggists which so many kind friends attempt to hurl at us. But I regret to say that when one consideration is taken into account we become quite unexceptional, quite common, and resemble most other societies, institutions, and individuals, inasmuch as we are finding it very difficult to make our income balance our expenditure. Up to the early days of 1914 we were quite a happy band, able to publish the original communications sent in by our Fellows, able to give our Fellows full value for their subscriptions and able to put by a small sum of money each year. In those days a page of the Journal cost 17s. 5d.; in 1921 the price had risen to £2 12s. 4d. It is true that at the present moment the price has fallen somewhat, but it is still well above twice the amount that it was in 1914. Moreover, the original communications are always on the increase, and we have now to make annual provision for the publication of 3,500 to 4,000 pages of Transactions alone. The situation is a very serious one from the point of view of the Society and it has given the Council furiously to think as to the possibilities of meeting it. The first step was to increase the subscription of our Fellows by 50 per cent. It is greatly to be regretted that it was found necessary to do so, for the majority of our Fellows are young men, and young chemists—in fact, I think I may say most chemists—are not over-burdened with this world's goods. The second step was to adopt the suggestion of the Treasurer to ask our Fellows to subscribe to a Publications Fund, the interest on which should be devoted to the upkeep of the Journal. We have raised in this way nearly two thousand pounds, but that is not enough, and we were faced this year with a possible adverse balance of some three thousand pounds. The Treasurer this afternoon told us we actually had a credit balance of some £210, but how has this been obtained? By ruthlessly cutting down the original communications

sent in for publication, to such an extent as to cause endless displeasure to authors and to leave it doubtful as to whether we are doing justice to their work; further, by asking Fellows to pay for the Annual Reports, which so far have always been distributed free, and by many other curtailments of our legitimate activities which, in my opinion, are greatly to the disadvantage of our Fellows and form a distinct danger to the prestige of British chemistry. Most societies, most institutions and most individuals themselves decide the pace at which they will live, and the pace is generally regulated by monetary possibilities. But the Chemical Society is again exceptional. The pace at which we are living has not been decided upon by ourselves, but has been decided upon by no less an authority than the nation.

I have stated that up to 1914 we were a happy band. In that year the nation spoke to us for the first time on record, I believe, but it spoke in no uncertain voice. It said, in the first place, "We are at war. We want certain drugs used for the alleviation of pain and suffering; we have so far obtained these supplies from abroad, and that source is now cut off. We are aware that these drugs have never previously been made in this country; we are aware that they require skilled labour for their production. Therefore we want you to prepare them for us." Well, those drugs were prepared by an organised effort on the part of the chemists of practically all the Universities and University Colleges in this country. Then came a second call. The nation said, "We want more explosives: T.N.T., picric acid, ammonium nitrate; we want acetone and dye-stuffs." Finally, there came a third call: "We want poison gas, poisonous and always more poisonous, and with each gas we want complete protection." I do not think it can be said that any of these calls were made in vain, or that the chemists of this country were found wanting in any way. So far as I know the chemists of this country, that is, the Chemical Society has never spoken back to the nation, but I suggest the time has come when this might be done, and in terms such as these:—

"In 1914 you asked us to do certain work for you, which we did to the best of our ability. We at once admit that some of our results were not forthcoming as speedily as we could have wished and in circumstances where speed was all important, due to the fact that the type of work which you asked us to do was new to us and we had perforce to gain experience. This experience has shown us clearly that in order to be prepared for any call which you may make upon us in the future, when delay may prove fatal, it is necessary that nothing should be left to chance, and it is therefore essential for us to carry out numberless researches so as to keep ourselves fully

informed of the possibilities of chemistry generally. Your requests of 1914 have greatly stimulated research activities in this country, and the publication of the increased number of papers has become a very serious matter to the Chemical Society, which can only meet the present situation by greatly curtailing its legitimate and rightful activities. In these special circumstances, will you not help us to carry on our legitimate work?"

I cannot think that such an appeal could possibly fall on deaf ears, for this very simple reason, that the Chemical Society through the efforts of its members has proved itself to be a national asset of the utmost magnitude and importance. Sir Frank Heath, once more I thank you for the way in which you have proposed the toast of the Chemical Society.

PROFESSOR HENRY E. ARMSTRONG (Past-President), in proposing "The Retiring President," Professor W. P. Wynne, said:—

Mr. President and Fellows of the Chemical Society, I ask you to lend me your ears and I hope I shall reach them. You have an unusual opportunity, an unusual spectacle, to offer to our guests to-night—that of a retiring President. The programme is wrongly printed. The "The" should be in Clarendon and "retiring" in italics. Presidents are not often retiring. Their business is to be unashamed and aggressive on behalf of the bodies they represent. A little more than two years ago I undertook two tasks: one, an easy one, was to convince the Society, the Council of your Society, that a particular person was *the* man for the office of President; the other, an almost impossible one, to cajole, to persuade, all but to force that particular person to recognise, as the walrus said, that his time was come to take on the many things pertaining to the President's office in our honourable body. It is little short of forty years ago, on March 27th, 1886, that he came to me as private assistant and had we been wise we should never have parted company. The years we worked together were the happiest and most fruitful of my life. We were not called upon to concentrate hydrogen ions; we never wasted time on noughts and crosses; no Lowry worried us with perpetual rechristenings of the already fully-named; we just quietly kept company with a hydrocarbon which was thoroughly well behaved and responsive. Our work was straightforward. There was no angle worship about it and we reported our results without fuss of any kind, in the briefest possible manner.

We put up ten signposts for the Di- and fourteen for the Trichloronaphthalenes and thereby demonstrated the truth of a doctrine fitly to be called, a *theory* of benzenoid structure, which I venture to say no X-ray analysis can upset. I think I may say

we were both proud of our exhibit at Wembley last year, when we thought of its implications. Our work pleased the Germans but it met with no recognition at home. It was unnoticed and that was a double compliment. It cost much toil during many years and a good deal of hard cash; neither of us made a halfpenny out of it.

I am told that Mr. Wells asks a couple of hundred pounds for a couple of thousand words. At all times, we could get what we wanted, what material we wanted, free of cost from Germany. We were never offered anything from our English works and our advice and assistance was never invited, although we worked in a technical college. Now, a great branch of the dye-stuff industry stands upon the foundation we built up. Yet neither before nor during the war, nor since, have we been asked to advise or assist in any way in the construction of the English edifice. Now, I modestly mention these points, in support of what the President said to-day as to the lack of co-operation between science and industry. When that address of his is printed, I trust that the measured terms in which he spoke on that subject will have their effect. I may say that the work was done in a sense *sub-rosa*, without official encouragement. I recollect on one occasion speaking to our hon. secretary, Sir John Watney, about research. His immediate reply was, "Your business is to teach boys, not to do research." That is the kind of encouragement we got in those days. This is the spirit that has been behind the comparative failure of our institutions to do original work, of which the President spoke to-day. It was not the primary fault of those who were working in the institutions.

I was glad to hear him speak out particularly on one subject—I think it was the keynote of his address—and say plainly that it is absurd for the Universities of this country all to attempt to do the same thing and on the same scale. Sir Frank Heath has told you of the tendency there is to specialise. A great lesson to be learnt by the Universities in this country is that they too must specialise. His University has no right to deal with anything but iron and steel and things of that kind. It will only be by specialising, that it will be possible for the several universities to effect the exchange of workers of which he spoke. Supposing we were to legislate to-morrow in the direction in which he spoke, all the research workers would drift to one or two places. That is a serious danger of any attempt of that kind.

Now to return to the man. My respect for his great ability as a worker, as a chemist and teacher and for the nobility of his character, has steadily increased with years. As a chemist, I

know of no better worker and teacher; as a man I have known no man so conscientious and self-sacrificing. I would recall to you the service he rendered as Editor in years gone by, of which our President gave so striking an illustration to-day. I wish the spirit he showed on that occasion could be manifest throughout the Society and I wish that Editors could be brought to take the same interest and at the same time show the same ability in their Editorial work that our late President displayed. You have heard how conscientious he has been. He has attended every possible meeting of the Society it has been possible for him to attend and he has done a great deal of outside work. Such a man deserves our thanks, not only for the work he has done, for the direct service he has rendered, more particularly must we thank him for the example he has set. Unsparring unselfishness is scarcely a present failing of the chemist, but the time is at hand when it must be your distinct characteristic.

Sir Frank Heath has rightly told you that after all it is not the atom but the molecule that is the real thing. The atom has no character until it joins up into the molecule. Speaking before the Institute of Chemistry recently, I said that chemists have reason to be proud of themselves on account of their achievements. At all events, the young women of the day are clad in cellulose and fine raiment mainly through your services. Even the Medical Research Council is faintly yearning for chemical aid. Sir Frank Heath spoke of Biology being the science of the future. Biology is nothing but chemistry when it comes to the real thing. Biology is making slow progress at the present time but most of the Bio-chemists, as I have said, are but bits of chemists. When they become chemists, there will be a real advance in vital chemistry and in medicine too. Still, with all this service to your score you have no recognised public standard and what is worse, no internal cohesion but lots of friction. You are not three hydrocarbons but more than thirty. Now is the time for you to show that you can come together, hold together, log roll together and organise together. There must be complete fusion of interests, I hold; an end must be put to the present chaos and inefficiency of publication. If necessary, to find funds, you must give up smoking. Your analyses will be more trustworthy if you do. There will be less tendency to believe in the transmutation of copper into lithium. No small temporary scheme will suffice. To be at all, you must be big.

Now, gentlemen, if you have any element of human feeling, you will sympathise with me in my determination to overcome to-night the modesty of your too-retiring President and join with

me in thanking him, with all possible warmth, for the distinguished way in which he has served the Society during the past two years and for the great example he has set by his unselfish devotion to the interests of our profession. I call upon you to join with me in drinking the future health and happiness of our late President, Professor Wynne.

Professor W. P. WYNNE, D.Sc., F.R.S., responding, said :—

I rise to thank you most heartily for the cordial way in which you have received the toast. I hope I may be allowed to regard it not as applying only to myself, but as including all those who have worked with me in the interests of the Society during the past two years. But for the loyal co-operation and cordial support of the officers, the Council and the office staff I could have done little or nothing, despite all the kind things Professor Armstrong has said in proposing the toast. He is my father in chemistry, and his eulogy is to be explained not by my merit but by the partiality often displayed by a parent.

As a father, Professor Armstrong is doubly fortunate, for, in addition to four distinguished sons who bear his name, he has a numerous chemical family of which I am proud to be the eldest. Two others of us, Sir William Pope and Professor Lowry, are also present this evening. As will have been gathered from what he said we may not be in complete agreement with our father's views on every subject—a not uncommon experience in families, chemical or otherwise—but that does not diminish in the slightest degree our affection for him or sincere appreciation of our fortunate upbringing.

Professor Armstrong referred to the date on which I became his private assistant. I had left South Kensington a few months earlier, and it was through Professor Japp's kind offices that this most happy chance came my way. If a reference may be permitted to the plea put forward this afternoon for the encouragement of migration, this crossing of Exhibition Road from the one College to the other did undoubtedly exercise a profound influence on my own career.

I had the good fortune to number among my teachers no fewer than seven Fellows of the Royal Society, five of them being Past-Presidents of this Society, and, on an occasion such as this, it is no less a pleasure than a duty gratefully to acknowledge my deep indebtedness to them. The first of these Fellows was Dr. George Gore, who, it may be remembered, published so long ago as 1865 an account of the modification in the properties of some seventy substances produced by complete desiccation, and thus was a pioneer in the field of research so closely associated with Professor

Brereton Baker's name. He was a self-made man. How he came to be chemistry master in King Edward's School, Birmingham, I do not know, but he had never been to a training college, and thus his originality had not been educated out of him. His method of judging the nature of our work was to suggest at the commencement of the class, that we should write a résumé of the previous lesson. This was assessed by the number of pages handed in at the end of a quarter of an hour, irrespective of the fact that some of them might contain six words and some of them sixty. That is the way in which I started to learn chemistry. Then, having left school, I went to evening classes after the day's work, and am a product of that system of "payment by results," under which science classes were farmed out to teachers, who were paid by fees based on successes achieved by their students in the examinations conducted by the Science and Art Department of those days. Despite the hard things which have been said about it, I do not think the system was wholly bad. At any rate it gave me my chance and to many others theirs. It provided, indeed, the only avenue to instruction in science subjects open to most students in the 'seventies of last century before University Colleges and Technical Schools came into existence. By its aid I went to South Kensington in 1881 and there had the great advantage of being a student under Sir Edward Frankland, Professor Percy Frankland and Professor Japp, who began my training in research. Thereafter followed the training as a teacher under Professor Armstrong, who taught me—nay, compelled me—to think; Sir Edward Thorpe, who brought me back to the old College, and Sir William Tilden, who last year, although in infirm health, did me the great honour of coming to the anniversary meeting and saying words which I shall never forget. I am to see him tomorrow, and I hope I may take to him from this gathering a message of affectionate regard and esteem. (Cheers.)

There is just one remark I should like further to make. Sir Frank Heath spoke in most appreciative terms of chemists and of their adaptability, for which we thank him. But it is only right to remember that the indebtedness to which he referred is not wholly on one side. I think the signal success which has attended the work of Sir William McCormick and Sir Frank Heath, neither of them men of science, in producing the result known as the Department of Scientific and Industrial Research, serves to show that success in such enterprises comes not only from a knowledge of men and affairs, but in no small measure from a sympathy with, followed by an understanding of, the type of problem to be solved.

As the thirty-ninth President, no longer retiring but retired, I salute my friend and colleague, the fortieth President, wishing him

as happy a time during his period of office as fell to my lot. Once again I thank you all most sincerely for the way in which the toast has been received. I do not deserve the praise; I have simply done my job.

The toast of "The Federated Societies" was given by Professor IRVINE MASSON, who said:—

There are, I suppose, few of us here who are so deeply learned in chemical politics as to be at once aware of what this term connotes; and I will therefore first adopt the old-fashioned plan of giving instruction by means of enumeration. The Chemical Society is affiliated with no fewer than seventeen others. Of the eighteen, four deal primarily with pure science—the Mineralogical, Faraday, Biochemical, and ourselves; twelve with the methods and the discoveries of pure science as applied to practical arts, namely the Society of Chemical Industry, Society of Public Analysts, Royal Agricultural Society, Institute of Brewing, Society of Dyers and Colourists, Society of Leather Trades' Chemists, Royal Photographic Society, Institute of Metals, Iron and Steel Institute, Ceramic Society, Society of Glass Technologists, Institution of Gas Engineers; and two are of a special character, namely, the Institute of Chemistry and the Association of British Chemical Manufacturers, which deal with chemists professionally and in their relation to the lay public.

What is especially made prominent by this list is, not so much the subdivision of pure chemistry, as the great number of ways in which the science as a whole has found a place in the business concerns of the nation. So evident is this, indeed, to chemists, that we have now and then to remind ourselves that if we have won the privilege of helping a little in the material welfare of our country, we cannot evade the responsibility which has thereby been entrusted to us. And, with this in view, the more we can do to foster intellectual sympathy between all kinds of chemists, the more will our science be able to serve the nation at large. And this is why there is a Federation of all these societies: it is a federation primarily *pro bono publico*, not merely *pro bono chemico*.

Let me indicate briefly two or three ways in which co-operation has usefully shown itself at present.

The Library of the Chemical Society has of late years been extended and is annually increased, with the set purpose of being useful not alone to its own Fellows but also to members of the other affiliated societies. Towards the heavy annual cost of this addition to its original function, many of these Societies have contributed; and now our Library, poorly housed though it is, is becoming a truly national asset. Last year, for instance, the

visits to consult our 30,000 volumes averaged about twenty-two per day; and of these, one-third of the consultations were made by members, not of the Chemical Society, but of other societies, while among the other two-thirds many were members of the Chemical Society and the others as well.

Another example is seen in the co-operation between the Chemical Society and the Society of Chemical Industry which has set going the Bureau of Chemical Abstracts. The Bureau has done a great deal of quiet work already, and it has before it the central problem of unifying the British publications which survey each month or fortnight the whole of the world's current literature of chemistry. Surely no obstacle short of insuperable bankruptcy should be allowed to stand in the way of an end so desirable.

A collective token of federation is, I take it, to be seen in that body of delegates, the Federal Council for Pure and Applied Chemistry. There is something in this Council which reminds one of the luminiferous ether. It was originally invented to offer a medium for the propagation of light and radiation of energy, and to overcome the difficulty of action at a distance. Yet, I have been told, experiments made with the object of detecting it in motion have failed; and some daring moderns have even questioned the necessity for believing in it, and have dubbed it a pure convention.

Now there is a name which I have to couple with this toast—that of Mr. Woolcock. Chemists, as such, are trained to deal with things which are in themselves non-human; yet, because these things, and we ourselves, must everywhere affect human affairs, we need human guidance. It is to wise and experienced men like Mr. Woolcock that we instinctively turn for such help; and not one of you does not know how well and generously Mr. Woolcock gives it—think of one example alone, chemistry at Wembley. Mr. Woolcock fulfils the function of an ideal catalyser; for he starts, facilitates, or hastens actions, without upsetting any equilibrium, and himself emerges apparently unchanged at the end.

I ask you to couple with the toast of the Federated Societies the name of Mr. Woolcock.

Mr. W. J. U. WOOLCOCK in his reply stated :—

I feel my efforts to respond to this toast will be somewhat inadequate, the more so as on looking at the toast list and seeing the term, "The Federated Societies," I did not know what was meant by it. My chemical education is, as you know, very limited. Hitherto I have supposed that I knew just sufficient chemistry to understand what the real chemist was talking about when I had to take his advice. For once I have failed. Professor Masson, convincing as

he is on most subjects, lucid to a fault on his own particular subject, has left me absolutely in the dark as to what is meant by the "Federated Societies." I at first thought that possibly it was a misprint and that Sir William Pope was intended to reply on behalf of the Federal Council. The delightful language in which Professor Masson brushed on one side the Federal Council leaves me in no doubt that he is not referring to that body, but he gave us, in order that we might know exactly about what we are talking, a list of learned bodies which, in the hope or in the anticipation of the Chemical Society, will ultimately become federated. Let us hope that that will eventuate. In future when I have to think of a reason why I should be considered a chemist, I shall always think of what Sir Frank Heath said, and regard adaptability as a qualification in a claim for that distinguished name, because I think it is a qualification which those of us who lack some qualification in science may readily embrace and regard as practicable, and in that way seek admission to the inner circle, because it is very true that the chemist is an adaptable person, and those who have to have something to do with him need to be adaptable as well.

It has been my fortune during the past twelve months to study two chemists at very close range. In fact, if I had attempted to define the Federated Societies I should have thought of a rather shorter list, and thought of the Chemical Society, the Institute of Chemistry and the Society of Chemical Industry, because of the real federation which has existed between those three bodies for some little time, and perhaps never more closely than during the past twelve months. I have been able to study at short range the Presidents of the Chemical Society and the Institute of Chemistry. We have travelled together, and it is a common thing for Professor Henderson and myself to speak together in different towns. That kind of intimacy brings familiarity and a working together which can only be obtained in that way. I remember that some time ago we arrived in Birmingham together. We had been in Glasgow the night before and had as usual said the proper thing about each other. Professor Henderson, when we got to Birmingham, called my attention to a placard just outside the station, and, after a quick glance, said, "They know we are coming," but not taking it quite as quickly as Professor Henderson, I saw that he was mistaken and I studied it a little more closely. The two Macs advertised there were not ourselves.

During the past twelve months there has been hardly a local branch of the Society of Chemical Industry or of the Institute of Chemistry that has not had a joint dinner. This indicates a desire for co-operation among the rank and file of which those who are

temporarily the leaders of the chemical societies and associations in this country will have to take notice.

I do not myself believe it is possible for the Councils of the various Societies to lay down a definite scheme for federation and to attempt to impose that on the local branches of the various Societies, but I do think that at the present time there is a demand throughout the country that we shall do something to prevent this appalling overlapping and duplication in the production of chemical literature, and do something which will satisfy the man who likes to consider himself in the rank and file and who at the same time feels that there is a definite need for a closer union among the Societies and the Associations.

Well now, neither Professor Wynne nor Professor Henderson nor myself is capable of doing that sort of thing individually. Together, of course, we have found it very easy. If we were upon a job which required modesty of demeanour, Professor Palmer Wynne did it. If it required some of that native shrewdness and ruggedness of character, Professor Wynne and I pushed Professor Henderson into it. If, of course, it were a mere torrent of words that was required, you know what would happen. But unlike the Duke of Plaza Toro, we have no desire to lead our Societies from behind, and in our individual capacity—not in our representative capacity—we have prepared a scheme for a Chemistry House to which each of us felt entitled to put his name, not binding our respective Societies or Associations in any way. This is a scheme which we feel we can recommend to those of our friends who are prepared to listen to our recommendations. I feel that with you, Dr. Crossley, in the chair in succession to Professor Palmer Wynne—and if I may say so, I welcome you very heartily in the chair—the work will continue.

We of the "Federated Societies," yes, of the Federated in inverted commas Societies, thank you very much indeed for inviting us to-night, and thank Professor Masson for proposing the toast. We wish the Chemical Society every prosperity during the coming year, and hope that the traditions which have been built up during the past four or five years of close working and co-operation between the officers of the various Societies will be maintained. We trust that under your guidance those traditions will continue and we may be even more successful in the coming year than in the past.

Professor F. G. DONNAN, C.B.E., D.Sc., F.R.S. (Foreign Secretary), proposed the toast of "The Guests," coupled with the names of Professor ERNST COHEN, of Utrecht University (representing the Nederlandsche Chemische Vereeniging), and Mr. J. HUNTER GRAY, K.C., M.A. \* He said :—

We have here to-night four distinguished representatives of

Holland, Professor H. J. Backer, Professor Ernst Cohen, Professor A. F. Holleman, and Professor H. ter Meulen. Three of them are accompanied by their wives. May I say that we wish these ladies also a very hearty welcome to London and to the Chemical Society dinner.

I believe it is true that although the population of Holland is relatively small, actually the largest number of Nobel prizes has been given to that nation, which is a wonderful tribute to the scientific output and ability of Holland. It is nothing new, for that country has always been perhaps the greatest centre of scientific culture in Europe. I have great pleasure in saying a few words about my friend Professor Cohen, of Utrecht, whose name I have the honour to couple with this toast. I think it is rather late in the evening to refer to the distinguished work of Professor Cohen, but he is the most eminent pupil of that great man, Professor J. H. van't Hoff, and is one of the greatest authorities on the effect of high pressure on chemical reactions, and many other things.

When I come to look at the list of other distinguished guests associated with this toast, I feel like a miserable sinner transported to Paradise and asked to propose the toast of all the holy Saints. The Rt. Hon. Sir John Anderson, G.C.B. (Permanent Under-Secretary of State for Home Affairs), is one of our guests, and may I assure him, speaking as one Secretary of State to another, that if in the conduct of the affairs of this great country he wishes for any advice, the President of the Chemical Society will be always willing to help.

I have also the pleasure of coupling with this toast another name, that of one of those modest men of law, Mr. J. Hunter Gray. I have had the honour to be associated with him in one or two cases. It is needless to speak about these great men, because we all spend our nights reading the *Evening Standard*, and our days reading *The Times*, and we have the greatest admiration for their work.

There is one thing I should like to say before I conclude, namely, in reference to a very important part of the toast, that of the ladies present to-night. We wish them all a very hearty welcome.

It is my great pleasure and honour now to give you the toast of "The Guests," coupled with the names of Professor Cohen and Mr. Hunter Gray.

Professor ERNST COHEN, who replied for the Dutch chemists present, said :—

During the toast of my friend Donnan I made some notes, but it seems to be impossible to make a response to all the remarks he made in the toast. I think it would take too much time. This afternoon I had a warning from the new President of your Society

that everyone must be brief. I think there is no nation more fond of conciseness in speech than the English. Take, for instance, your chemical abstracts. When an English chemist wants to describe the properties of any substance or fluid he says: B.P. 100, F.P. zero, D.C. 80, and for those who are not familiar with those telegraphic hieroglyphics I will add that B.P. means boiling point, F.P. freezing point, D.C. dielectric constant.

In English literature or poetry you find absolutely the same thing. I remember an English rhyme made up of initial letters which, for those who are not in a hurry, I will translate:

A fishy old fisher, called Fisher,  
Fished fish on the edge of a fissure.  
The fish with a grin  
Pulled the fisherman in.  
Now they're fishing for the Fisher within.

But the most striking conciseness is found in the language of English daily life. When I have to write a letter to the Foreign Secretary of the Chemical Society I write: F. G. Donnan, M.A., Ph.D., F.R.S., F.S.C.S., London, W.C.1, and so I could go on. If I were to follow these lines in responding, I would have to condense them into a few initials, which in plain English would mean, "I wish to the Council and the Fellows of the Chemical Society, good luck, welfare, prosperity and happiness."

Ladies and gentlemen, as I am a foreigner, you will allow me to express myself in a somewhat more elaborate way. In the first place, I have to thank the Council and the Fellows of the Chemical Society in the name of my Dutch colleagues who were so kindly invited to attend this dinner and the Annual Meeting this afternoon, and also to thank you in the name of the Dutch Chemical Society whose representatives are prevented from being here and celebrating with you the birthday of this Society with which so many illustrious names are linked.

There is a French saying which means, "Every meeting we finish by a dinner whenever we can, and it is by a dinner that we rule over man." But I make an alteration in the last line and say, "It is our dinners which delight ladies and men." The question arises as to the origin of the custom of finishing such a meeting with a dinner. We have had two dinners to-day; in the afternoon our President gave us mental food in his most interesting lecture, and now we have material food. Whence comes the custom of linking the two? It is your countryman, Joseph Priestley, to whom you are indebted for this most pleasant custom. Priestley has been pictured in a fascinating way in a caricature by one of your countrymen as sitting at a dinner, but at a dinner which he never attended.

Priestley was a very wise man. He also invented soda-water, a very good remedy for many persons who have attended a dinner. I have been so lucky as to find the caricature, and I have had it copied and will ask you all to accept a copy not only as a memento of this splendid invention by your countryman, but also as a memento of most pleasant hours spent in your company. I feel sure that my Dutch colleagues will feel with me that we have had a very interesting meeting and enjoyable dinner with you, and thank you all for the very kind way in which you have invited and entertained us.

Mr. J. HUNTER GRAY also replied, saying :—

Professor Donnan, and members of the Chemical Society, a few days ago I had the burden and privilege to make the last speech at another meeting and I had taken the greatest trouble to prepare an impromptu speech to deliver on that evening. It passed through my mind that I might palm it off once more, but I had no sooner come into this room than I found two members of this company—Sir Frank Heath and Professor Armstrong—who had heard my last impromptu effort. Therefore I am thankful I had made preparations for another impromptu speech.

This toast recalls to me a set of questions and answers which appeared recently in one of the newspapers. The publication of those questions and answers was for the purpose of demonstrating the super-excellence of a system of education in this country for which we paid so many millions of pounds annually. One question put was, What is a Guest? One bright youth answered, "A Guest is a joke." Well, I hope the guests are not worse than jokes to-night, because I would rather be a guest than a nuisance, especially as I am making the last speech on the toast list. The guest who talks too much is apt to become a nuisance, so I will be quite brief. Another answer was, "A Guest is a person usually of the male sex who eats and drinks as much as he can and pays nothing for it." I suspect that the young person who wrote that answer was a precocious member of the other sex. But we do, as guests, come within that definition.

We to-night are guests of a most eminent body of scientific men, and it is inevitable that our thoughts should be extraordinary when we hear about molecules and atoms and the somewhat dubious relationship between them, and we may play with unusual ideas. For example, usually when I look at the menu and note the various courses and I see there is one course entitled *Saumon d'Écosse* with some other French words, I should say that was good Scotch salmon. But no such thoughts came into my mind to-night. When I put my knife into that salmon, I wondered if I should find at least a dozen of those bodies Sir Frank Heath referred to, vitamins,

running about, and perhaps I might even find a few of those bodies known by some curious names, and see the poor little vitamin running away and calling in terror-stricken tones, "Yadil, Yadil."

But let me be serious. I am not one of those, although a mere lawyer, who think that the premier gifts of scientific genius have departed from this country. I believe that in the future, as in the past, our British men of science will remain in the van of scientific progress. The whole world has marvelled at the wonderful work done by them, and especially, may I say, by our chemists in the Great War, and believing, as I do, that any future warfare will depend more and more upon scientific progress, I have no fear, if only the public and the Governments of this country will give to science that encouragement which it demands and which it deserves.

I am proud to be associated with the great scientist Professor Cohen to-night in responding to the toast of the Guests. We, the Guests, thank you, our Host.

Ordinary Scientific Meeting, Thursday, April 2nd, 1925, at 8 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of the following :

Honorary Fellow.	Elected.	Died.
Guglielmo Körner .....	Jan. 20th, 1898.	March 28th.
Fellows.		
Charles Samuel Mummery .....	Dec. 5th, 1907.	March 27th.
Robert Atkinson Oddy .....	Feb. 21st, 1918.	March 12th.

The PRESIDENT announced :

1. That the Keith Gold Prize Medal of the Royal Society of Edinburgh awarded to the late Robert Traill Omond, LL.D., has been lent by Mr. Arnold Stevenson for exhibition in the Medal Case. It is hoped that other Fellows will add to the interest of the Society's Collection by loan or gift.

2. That the following Committees for 1925-1926 had been appointed by the Council :

Finance Committee : J. L. Baker, A. Chaston Chapman, F. P. Dunn, C. A. Hill, G. T. Moody, R. H. Pickard, and the Officers (Treasurer as Chairman).

House Committee : J. L. Baker, Sir Herbert Jackson, Alexander Scott, J. M. Thomson, Sir William Tilden, E. W. Voelcker, and the Officers.

Library Committee : P. P. Bedson, O. L. Brady, J. R. Partington (Chairman), Sir Thomas K. Rose, Alexander Scott, J. F.

Spencer, the Officers, and the Librarian, together with the following representatives of contributing Societies : J. L. Baker, R. B. Brown, J. C. Drummond, A. Harden, J. P. Longstaff, R. L. Mond, G. Senter.

Publication Committee : H. B. Baker, E. C. C. Baly, H. Bassett, O. L. Brady, H. W. Dudley, U. R. Evans, J. J. Fox, A. J. Greenaway, I. M. Heilbron, T. A. Henry, C. K. Ingold, H. McCombie, I. Masson, W. H. Mills, T. S. Moore, G. T. Morgan, J. R. Partington, J. C. Philip, R. H. Pickard, F. L. Pyman, N. V. Sidgwick (Chairman), W. P. Wynne, and the Officers.

Research Fund Committee : A. J. Allmand, H. B. Baker, E. C. C. Baly, J. B. Cohen, W. H. Mills, Sir Robert Robertson, R. Robinson, N. V. Sidgwick, Sir James Walker, W. P. Wynne, and the Officers.

The following were formally admitted Fellows of the Chemical Society : G. E. Gardam, G. E. Watts.

Certificates were read for the first time in favour of :

Neville Melton Bligh, A.R.C.S., A.I.C., 67, Castle Road, Bedford.

Hugh Alexander Millar Borland, M.Sc., A.R.C.S., 14, Cotham Road, Bristol.

Malcolm Sinclair Gaskill, 3, Buckingham Road, Hilton Park, Prestwich, Manchester.

Norman Hamer, Ash Mount, Holcombe, Manchester.

Ivor Gray Nixon, 75, The Vale, Golder's Green, N.W. 11.

Vincent Joseph Occleshaw, M.Sc., A.I.C., 22, Byrn Street, Ashton-in-Makerfield, Wigan.

Leon Rubenstein, B.Sc., 87, Eaton Grove, Swansea.

Alec Thomas Streather, B.Sc., A.I.C., 3, Wellington Road, Watford.

Violet Corona Gwynne Trew, 18, Adam Street, Portman Square, W. 1.

The following papers were read :

"The formation of *d*-2:2:4-trimethylcyclohexan-3-one-1-carboxylic acid from *d*-camphorquinone." By C. S. GIBSON and J. L. SIMONSEN.

"Aromatic esters of acylegonines." By W. H. GRAY.

"The decomposition of hydrogen peroxide by cobaltic hydroxide." By F. G. TRYHORN and G. JESSOP.

## RESEARCH FUND COMMITTEE.

A meeting of the Research Fund Committee will be held in June next. Applications for Grants, to be made on forms which can be obtained from the Assistant Secretary, Chemical Society, Burlington House, W. 1, must be received on or before Monday, June 1st, 1925.

All persons who received grants in June, 1924, or in June of

any previous year, whose accounts have not been declared closed by the Council, are reminded that reports must be returned by June 1st.

### PUBLICATIONS FUND.

In connection with the Appeal for the Publications Fund issued by the Treasurer, it has been decided that a list of donations and subscriptions received shall appear in the Proceedings for June. All donations and subscriptions received prior to the end of May will be included in the List.

### LIST OF FELLOWS, 1925.

It has been decided to print the List of Fellows for 1925 and to supply the List to those Fellows who make application to the Assistant Secretary by the 31st July, 1925.

### BERICHTE, 1915 to 1924.

Sets of the Berichte from 1915 to 1924 (10 years) are now offered to Fellows of the Society at £22, carriage extra. Application should be made to Mr. S. E. Carr.

List of Papers, or Abstracts thereof, received between March 20th and April 2nd, 1925. (This list does not include the titles of papers which have been read at a Scientific Meeting, or which have appeared in the Journal.)

"The thermal decomposition of ammonia upon various surfaces."

By C. N. HINSHELWOOD and R. E. BURK.

"Strychnine and brucine. Part III. The position of the methoxyl groups in brucine." By F. LIONS, W. H. PERKIN, and R. ROBINSON.

"Compounds of tervalent molybdenum. Part III. New oxalates." By W. WARDLAW and W. H. PARKER.

"The composition of starch iodide." By H. D. MURRAY.

"Note on the atomic volume of manganese." By A. N. CAMPBELL.

"Note on molybdenum semipentoxide." By W. WARDLAW and F. H. NICHOLLS.

"The action of hydrogen chloride on *cyclohexylideneazine* and on *cyclopentylideneazine*." By W. H. PERKIN and S. G. P. PLANT.

- "The constitution of soap solutions in the presence of electrolytes : sodium laurate and potassium chloride." By W. C. QUICK.
- "The tautomerism of dyads. Part III. The effect of the triple linking on the reactivity of neighbouring atoms." By E. H. INGOLD.
- "The molecular condition of phenol in benzene solution." By J. C. PHILIP and C. H. D. CLARK.
- "The solubility of sulphur dioxide in water and in aqueous solutions of potassium chloride and sodium sulphate." By J. C. HUDSON.

**CERTIFICATES OF CANDIDATES FOR ELECTION AT  
THE BALLOT TO BE HELD AT THE ORDINARY  
SCIENTIFIC MEETING ON THURSDAY, MAY 7TH, 1925.**

BJERRUM, NIELS JANNIKSEN, Copenhagen, Vendersgade 28. Danish. Professor in Chemistry at the Royal Veterinary and Agricultural College in Copenhagen. Researches on liquid potentials, on complex compounds, especially of chromium, on the ionisation of electrolytes, on the thermic dissociation of water and carbon dioxide, on the theory of titration, on the atomistic explication of ultra-red spectra, etc. (*Signed by*) F. G. Donnan, J. N. Collie, W. E. Garner.

BLUNSDEN, ARCHIBALD BERESFORD, "The Bungalow," Westbury-on-Trym, Bristol. English. Asst. Tech. and Analytical Chemist. Employed for over five years by The British Oil and Cake Mills, Ltd. (Bristol branch) in research, etc., in their laboratory and works. Evening study at the Merchant Venturers Tech. College, including lectures, advanced analysis, and research. City and Guilds of London Institute Final Certificate (Technological) in Oils, Fats, and Candle Manufacture. National Certificate in Chemistry. Desire to keep up-to-date with advance in the scientific world. (*Signed by*) Arthur Marsden, M. W. Jones, Chas. J. Waterfall, S. Siddons Wilson.

BLYDE, GEOFFREY ALGER, "East Cliffe," East Bank Road, Sheffield. British. Steel Maker at A. Blyde & Co., The Wallace Steel Works, Sheffield. Late Student of Metallurgy, Applied Science Department, The University of Sheffield. I am desirous of joining with a view to extending my knowledge of Chemistry and Metallurgy by the use of the Society's Library and Journals. (*Signed by*) John Evans, L. Archbutt, J. E. A. Blyde.

BOWLES, THOMAS HENRY, "Allandale," Meadowside Rd., Cheam, Surrey. British. Chemist, 1st Grade, Government Chemists' Department. 28 years Government Chemists' Department. (*Signed by*) R. Robertson, Geo. Stubbs, J. J. Fox.

BRINDLEY, WILLIAM HARRISON, 11, Millmoor Terrace, Glossop, Derbyshire. British. Demonstrator in Chemistry, Faculty of Technology, University of Manchester. M.C., M.A. (Cantab.), M.Sc.Tech. (Manc.), A.I.C. Demonstrator as above since 1921. Joint author of "An Attempt to Resolve Quaternary Phosphonium Compounds," and "Some Esters of Anisic Acid." (*Signed by*) Frank Lee Pyman, Fredk. M. Rowe, John K. Wood.

BUCHAN, JAMES LINDSAY, Hampden Club, London, N.W.1. British.

Physico-chemical Research Student, University College, London. B.Sc. (Lond.), Hons. Chemistry. (*Signed by*) F. G. Donnan, W. E. Garner, D. McKie.

BULL, FRANK HENRY CHARLES, 50, Cornwall Road, Bishopston, Bristol. British. Works Chemist in the employ of Bristol Gas Company, Bristol. B.Sc. degree 1916 (Bristol University) (Subjects: Chemistry, Physics, Mathematics); Associate of the Institute of Chemistry, 1919; Full Technological Certificates in Gas Engineering and Gas Supply from City and Guilds of London Institute, 1923—4. (*Signed by*) F. Francis, J. W. McBain, M. E. Laing.

BUTLER, JOHN ALFRED VALENTINE, "The Potteries," Winchcombe, Glos. British. Assistant Lecturer in Chemistry, University College of Swansea. M.Sc. (Birmingham), 1922. Author of papers: *Trans. Faraday Soc.*, 19, 659, 729, 734, 1924; *J. Phys. Chem.*, 28, 438, 1924; *Phil. Mag.*, 48, 746, 927; *Zeits. phys. Chem.*, 113, 279, etc. *J.C.S.*, 1923, pp. 2370, 2380; 1924, pp. 963, 1101 (jointly with other authors). (*Signed by*) G. T. Morgan, S. R. Carter, J. E. Coates, L. E. Hinkel, E. E. Ayling.

BYFORD, ANNIE LAVINIA, 73, Elderton Rd., Westcliff-on-sea, Essex. British. Student of Chemistry. B.Sc. (Pass). Studying for B.Sc. Honours in Chemistry at Bedford College for Women. (*Signed by*) J. F. Spencer, H. Crompton, P. V. McKie, E. R. Levy.

CLEGG, JAMES HERBERT, "West Cliffe," Queens Park Rd., Burnley. British. Engineer and Manager, Burnley Corporation Gas Dept. Member of the Institution of Gas Engineers. My object in seeking membership of your Society is to extend my knowledge of and assist in the furtherance of Chemical Science. (*Signed by*) Raymond Ross, Ernest Hardiker, J. P. Leather.

COCKROFT, HORACE CECIL, 6, Highfield Terrace, Halifax. British. Schoolmaster. London, B.Sc., 2nd Class Hons. Chemistry, 1922; Associate of the Institute of Chemistry, Jan. 1923; Student at University College, Reading, 1919—1922. Research work on  $\text{CuCN-KCN-H}_2\text{O}$  system incorporated in paper, Bassett and Corbett, *J.C.S.*, Vol. 125, 1924. (*Signed by*) Robt. D. Abell, H. Bassett, J. W. Dodgson.

COYNE, FRANCIS XAVIER, 160, Addison St., Blackburn, Lancs. English. Student at the Blackburn Technical College. Three years' work at a Manufacturing Chemist's as a chemist, in the laboratory. Proficiency in Chemistry, Physics, Mathematics, German, French, Latin, and Greek. (*Signed by*) G. W. F. Holroyd, Harry G. Leigh, Robert H. Pickard.

CRAIK, JAMES, The University, St. Andrews. British. Carnegie Research Fellow. M.A. 1920 (St. Andrews). B.Sc. 1921 (St. Andrews). Ph.D. 1924 (St. Andrews). Author of a paper entitled "The Mechanism of the Oxidation of Typical Carbohydrates with Hydrogen Peroxide and Hypochlorous Acid," *J. Soc. Chem. Ind.*, 1924, 43, 171. At present engaged in Research Work in the Chemistry Department, University of St. Andrews. (*Signed by*) J. C. Irvine, John Read, G. M'OWan.

DANE, HERBERT GREETHAM, The Diocesan Training College, Winchester, Hants. British. Tutor and Lecturer (and Demonstrator) in Chemistry at the Winchester Training College. B.Sc. with First Class Honours in Chemistry, Sheffield, 1922. M.Sc. (Sheffield) 1923. Worked under Dr. J. Kenner 1921—22 on the Influence of Steric Factors on Intramolecular Condensation, see J. Kenner and E. Witham, *T.*, 1921, 1452. (*Signed by*) W. P. Wynne, F. G. Tryhorn, Arthur W. Chapman.

DEAN, HARRY, 134, New Lane, Oswaldtwistle, nr. Accrington. English.

Textile Chemist and Colorist. Assoc. Manchester Coll. of Technology (Bleaching, Dyeing, and Printing, including advanced Organic Chem. and Dyestuffs Intermediates). 3rd year College Certificate of Blackburn Tech. Coll. (Inorg. and Organic Chem. and allied subjects). (*Signed by*) Percy J. Rhodes, G. W. F. Holroyd, E. Knecht.

DIXON, MARGARET STEDMAN LEONORA, Homebush, Worcester Rd., Sutton, Surrey. British. Student. A student taking a B.Sc. Honours Degree in Chemistry at Bedford College for Women (University of London). (*Signed by*) J. F. Spencer, H. Crompton, P. V. McKie.

FARNELL, ROBIN GEORGE WESTBURY, Exeter College, Oxford. British. Chemist to the British Empire Sugar Research Association, 3, 5, 7, Old Queen St., S.W. 1. A.R.C.S. A.I.C. Research into the colloidal constituents of the juice of the sugar cane. (*Signed by*) James C. Philip, M. A. Whiteley, H. B. Baker.

FAULKNER, IRVINE JOHN, Emmanuel College, Cambridge. British. Research Student. (*Signed by*) T. M. Lowry, R. G. W. Norrish, L. P. McHatton.

FLETT, THOMAS, Anchor Cottage, Kirkwall, Orkney. British. Chemist. At present Works Chemist in a Factory. 4 Years' Course at Glasgow University, 1919—1923; Graduated B.Sc. (Applied Chem.) and was elected A.I.C., 1923; Works chemist at Thornley Binders, Ltd., since January 1924. (*Signed by*) G. G. Henderson, T. S. Patterson, R. Wright, S. Horwood Tucker.

GARDNER, THOMAS JAMES ELIJAH, 12, Bushwood Road, Kew, Surrey. English. Works Chemist (Consol Products, Ltd., Sunbury Common, Middlesex). 30 Years' experience in Manufacturing Chemistry, especially in the investigation and perfecting of Synthetical Essences and like products. I am anxious to keep in touch with the developments of modern Chemistry, particularly as applying to my own work. (*Signed by*) Francis W. Hodges, Frank A. Boys, Archibald Macpherson.

GARRAN, RICHARD RANDOLPH, Orphir, St. George's Rd., Toorak, Melbourne, Australia. Research student at the University of Melbourne. Bachelor of Science (Melbourne), 1st class Honours and Exhibition in Chemistry in first and second years, 2nd class in third year. Has since done a year's research (heterogeneous equilibrium) and is at present reading for Final Honour Examinations in Chemistry. (*Signed by*) A. C. D. Rivett, E. J. Hartung, W. Davies.

GIBLIN, JOHN CHARLES, 3, Kensington Terrace, Brecon, Wales. British. Science-master, Christ College, Brecon. Bachelor of Science (London, 1st Hons. Chem.). Associate of the Institute of Chemistry. (*Signed by*) W. J. Jones, Claude M. Thompson, E. P. Perman.

GILCHRIST, HELEN SIMPSON, 82, North St., St. Andrews. British. Research Chemist, Food Investigation Board, D.S.I.R. B.Sc. (St. Andrews), 1917. Ph.D. (St. Andrews), 1921. Author of a thesis on "The Preparation and Constitution of Synthetic Fats, containing a Carbohydrate Residue." Assistant in Chemistry, The University, St. Andrews, 1918—21. Joint author, with Principal Irvine, of (1) A Synthetic Fat, etc., *T.*, 1924, 125, 1. (2) Condensation of Mannitol with Olive Oil, *ibid.*, 10. (*Signed by*) J. C. Irvine, John Read, G. M'OWan.

HADFIELD, ISABEL HODGSON, 65, Langham Rd., Teddington, Middlesex. English. Research Chemist. M.Sc., London University. Seven years' research work for the Aeronautics Advisory Committee. Member of the staff at National Physical Laboratory. (*Signed by*) Guy Barr, L. L. Bircumshaw, J. T. Hewitt.

HALPIN, JAMES FRANCIS, St. Chads, 39, Benson Road, Forest Hill, S.E. 23. British. Superintending Chemist, Government Chemist's Department. Superintending Chemist in the Government Laboratories. Fellow of the Institute of Chemistry. (*Signed by*) Robert Robertson, Geo. Stubbs, A. More, J. J. Fox.

HANSON, DONALD, 7, Willow Bank, Halifax. English. Works Chemist. Passed in Physics as subsidiary to taking Honours B.Sc. (External) of London University. Also 8 years' Laboratory and Technical Experience in Explosive Manufacture, Tar Distillation, Textile Chemistry, and Analytical Work. (*Signed by*) W. Sowden, G. C. Riley, W. J. Stansfield.

HAWORTH, THOMAS, 8, Park Terrace, Fielding Lane, Oswaldtwistle, Lancs. English. Assistant Gas Engineer and Manager, Oswaldtwistle Urban District Council. (*Signed by*) G. W. F. Holroyd, Harry G. Leigh, J. T. Holden.

HEATON, JOHN STANLEY, 43, Birch Rd., Crumpsall, Manchester. British. Research Chemist. Student and research worker at Liverpool University for five years. B.Sc. (1st Hons.). Ph.D. Now engaged on research in textile industry. "The Investigation of Meso-thioanthracene Derivatives. Part I," Heilbron and Heaton, *J.C.S.*, 1923, 123, 173. (*Signed by*) I. M. Heilbron, William Doran, F. C. Guthrie.

HENSMAN, JOHN CYRIL, M.A., A.I.C., Aldenham School, Elstree, Herts. British. Chemistry Master, Aldenham School. 1921, Cambridge Natural Sciences Tripos, Part I (Chem., Physics, Physiology); 1923, Cambridge Natural Sciences Tripos, Part II (Chemistry); 1923, elected to an Associateship of the Institute of Chemistry; 1923-4, Asst. Science Master, Rotherham Grammar School, Yorks.; 1924, Chemistry Master, Aldenham School. (*Signed by*) T. M. Lowry, W. H. Mills, Charles T. Heycock.

HILL, JOSEPH, 58, Spring St., Accrington, Lancs. English. Chemist (Works). Past Blackburn Tech. College, 4th year Day Course. Occupation: Chemist, East Lancashire Soap Works. (*Signed by*) G. W. F. Holroyd, Harry G. Leigh, J. T. Holden.

HOCKING, FREDERICK DENISON MAURICE, 18, Woodside Park Road, N. Finchley, N. 12. British. Biochemist (and at present Final Year Medical Student, Univ. of London). M.Sc. (Lond.) with mark of distinction. A.I.C. (1920). A.C.G.F.C. and Streathfield Memorial Prize, 1919. (*Signed by*) A. Prideaux Dawson, Arthur J. Hale, H. M. Atkinson.

HOYLE, JIM, 11, Crow Lane, Ramsbottom. British. Finisher (Woollen). 2nd and 3rd Year Certificates Chemistry gained at Blackburn Technical College. 1st, 2nd, 3rd, and 4th Year Chemical Trades Course. U.L.C.I., with distinction in Magnetism and Electricity. (*Signed by*) G. W. F. Holroyd, Harry G. Leigh, J. T. Holden.

HUGHES, HORACE WILLIAM, 27, Ombersley Rd., Balsall Heath, Birmingham. British. Schoolmaster. B.Sc. (Birmingham), Class 1 (1921). Principal Subjects: Metallurgy, Chemistry; Subsidiary: Strength of Materials. (*Signed by*) Harold Harris, Thomas Turner, Wm. Wardlaw.

JACKSON, JOSEPH TAYLOR, B.Sc. (Lond.), 192, Algernon Road, Lewisham, S.E. 13. British. Lecturer in Applied Chemistry at The Leathersellers' Company's Technical College, S.E. 1. Bachelor of Science, London University. Fellow Royal Microscopical Society, London. War service (France and Salonika), Sept. 1914-Jan. 1919. (*Signed by*) Arthur Harden, Charles Dorée, S. Judd Lewis.

JERTU, DAVID BRET, 34, High Street, Welshpool, Montgomeryshire. British (Welsh). Research Student. B.Sc., University of Wales, First Class Honours. M.Sc., University of Wales. Associate of the Institute of Chemistry. Paper

Jehu and Hudleston, *Trans.*, 1924, 125, 1451. (*Signed by*) T. Campbell James, C. R. Bury, L. J. Hudleston, H. Medwyn Roberts.

JOBSON, WILLIAM, 52, The Mall, Swindon, Wilts. British. Analytical Chemist. Asst. Analyst in G. W. Rly. Chemical Laboratory, Swindon, for the last 25 years (less 4½ years' war service), appointed Chief Assistant, May 1922. Board of Education, S. and A. Dept., Inorganic Chemistry (Practical), Honours Part 1, 1903, Pass. (*Signed by*) W. R. Bird, T. C. Davison, T. Hartley.

JONES, CLIFFORD MERTON, Buxton Crescent, Newton Hill, Leeds Rd., Wakefield. British. University Student (post graduate). Science student at Queen Elizabeth's Grammar School, Wakefield (1914-1920). Laboratory assistant for two years (part time). Student in Science at University of Leeds, 1921 onwards. 2nd Class Honours B.Sc. in Chemistry, July 1924. (*Signed by*) J. B. Cohen, W. Lawson, W. A. Wightman.

JONES, THOMAS WILLIAM, 36, St. Vincent Road, Westcliff-on-Sea. English. Technical Chemist. B.Sc. (Hons. Chem.), London 1922. (*Signed by*) J. R. Partington, E. E. Turner, Stephen Miall, W. G. Shilling, F. A. Williams.

KEANE, JOHN, 6, Shamrock Villas, Drumcondra, Dublin. Irish. Assistant Lecturer in Chemistry, University College, Dublin. B.Sc. (First Hons.), 1917. M.Sc. 1918. Ph.D. 1922 (National University). (*Signed by*) A. G. G. Leonard, A. O'Farrelly, Sydney Young.

LUCY, ALFRED, 16, Chesney Street, Battersea, London, S.W. 11. British. Junior Assistant Chemist. Twelve years' Practical Chemical experience in Works and Research Laboratories (i.e., The Gas Lighting Improvement Co., Ltd.), etc. Chemistry student, attended classes up to and including the B.Sc. Standard in Theoretical and Practical Inorganic and Organic Chemistry. Battersea Polytechnic certificates for Inorganic Chemistry and Oils, Fats, and Waxes. (*Signed by*) William A. Godby, J. L. White, John Wilson.

MABBOTT, ERNEST EDWARD, 358, Fore Street, Edmonton, N. 9. British. Student. B.Sc. Engaged upon Organic Research work at East London College. (*Signed by*) J. R. Partington, E. E. Turner, A. T. Healey.

MCDOWALL, DAVID, 2, Kennishead Road, Thornliebank, Glasgow. British. Process Supervisor, Calico Printers, Ltd., 8 years, Manager, McDowall, Morrison & Co., Ltd., Chemical Manufacturers, and interested in research on behalf of Chemical Industry and in connection with Manufacturing Chemistry. (*Signed by*) Robert Craig McDowall, W. McHutchison, Andrew S. Matchett.

MANSKE, RICHARD H. F., The University, Manchester. British. Research Student in Chemistry, Victoria University, Manchester. B.Sc. 1923. M.Sc. 1924. Queen's University, Kingston, Canada. 1851 Exhibition Scholar, 1924—from Canada. (*Signed by*) Arthur Lapworth, R. Robinson, J. Kalf.

MOIR, HUGH CLOUSTON, 7, Craigielea St., Dennistoun, Glasgow. British. Chemist. Bachelor of Science (Applied Chemistry), Glasgow University. Associate of the Institute of Chemistry. Presently employed as Chemist by Wm. Beattie, Ltd., Dennistoun Bakery, 116, Paton St., Glasgow. (*Signed by*) G. G. Henderson, T. S. Patterson, S. Horwood Tucker.

MORTON, RICHARD ALAN, 2, Lumley Street, Garston, Liverpool. British. University Lecturer (Inorganic Chemistry). B.Sc., Ph.D. (Liv.), A.I.C. Several papers, *J.C.S.*, *Jour. Phys. Chem.* (*Signed by*) E. C. C. Baly, Harold Rogerson, I. M. Heilbron.

MOULDS, FREDERICK WILSON, Hill Crest, Villa Road, Nottingham. British. Chemist and Druggist. Member of the Pharmaceutical Society. Chemist

in charge of the Laboratories of Messrs. Newball & Mason, Ltd., Nottingham, and a director of the firm. Late student of the University College, Nottingham, where I studied Chemistry and Pharmacy, also Industrial Bacteriology. (*Signed by*) F. S. Kipping, J. B. Firth, F. C. Laxton, Wm. H. Sims.

MYLES, ANDREW JOSEPH, 12, Gardner Rd., Tue Brook, Liverpool. British. Works Manager and Chemist. 20 Years' experience in Tar Distillation and research work on Roads Compositions. Have written and read papers on treatment of and construction of modern road surfaces. Designed a viscometer for tar and bituminous compositions. (*Signed by*) George Tate, George S. Irvine, Thomas J. Roberts.

NASH, ALFRED WILLIAM, 18, Prospect Rd., Moseley, Birmingham. British. Professor of Oil Engineering and Refining. B.Sc. degree for original researches on the "Pyrogenesis of Hydrocarbons." "The Berginisation of Coal and Oil," author, *Journ. Inst. Pet. Technologists*, Vol. 10, 43. "Fuel Oil Resources of the Future," joint author, *Journ. Inst. Pet. Tech.*, Vol. 10, 47. "Somerset Oil-shales," joint author, *Journ. Inst. Pet. Tech.*, Vol. 10, 47. 1907-22, engaged in Oil Refineries—eventually General Manager. 1922-present, Birmingham University, Senior Lecturer, afterwards Professor. (*Signed by*) G. T. Morgan, A. E. Dunstan, Harold Harris.

OAKLEY, HENRY BOWEN, Wellcome Tropical Research Laboratories, Khartoum, Sudan. British. Assistant Government Research Chemist. Diploma of Imperial College. M.Sc. London. A.R.C.S. London. In conjunction with Prof. J. C. Philip, *J.C.S.*, 1924, 123, 1189. (*Signed by*) A. F. Joseph, James C. Philip, M. B. Donald.

PALMER, EDGAR KENT, Rose Bank, Victoria Rd., Hale, Altrincham. British. Post-graduate research. Oct. 1919-July 1923, Student at College of Technology, Manchester, in full-time degree course in the Chemical Technology of Textiles. July 1923, Grad. B.Sc.Tech. June 1924, Research under Prof. E. Knecht, Ph.D., and at present the same. (*Signed by*) Frank Lee Pyman, Edmund Knecht, John K. Wood.

POMERANTZ, DAVID, 15, Nottingham Place, Commercial Rd., E. 1. British. Student. Inter B.Sc. Two years at Royal College of Science for the 3 years necessary for the associateship (Chemistry). Am now doing the honours course at West Ham M. C. (*Signed by*) H. Bogdanor, George Dean, R. S. Glennie.

RAWLINGS, HARRY, 15, Station Road, Ramsey, Huntingdon. British. Science master (Chemistry). B.Sc. Lond., 2nd Hons. Chemistry, 1921. Assistant Analyst, Messrs. Boots Pure Drug Co., Ltd., 1915-17. Unpublished research on organic derivs. of tin, under Prof. Kipping at Univ. Coll., Nottingham, 1921 and early 1922. Chemistry student at Univ. Coll., Nottingham, 1917 and 1919-22. Am at present working for M.Sc. (Lond.) [May 1925], and desire access to the Library of the Society. (*Signed by*) F. S. Kipping, E. B. R. Prideaux, J. B. Firth.

REED, JOHN BRENT, 49, St. Mildred's Rd., London, S.E. 12. British. Assistant Research Chemist in the Research Laboratories of the South Metropolitan Gas Coy. Bachelor of Science, London. Associate of the Institute of Chemistry of Gt. Britain and Ireland. Student at Birkbeck College for the degree of Doctor of Philosophy. (*Signed by*) George Senter, S. Sugden, Walter T. J. Morgan, S. Medsforth.

RHODES, WILLIAM GEORGE, Park View, 318, Granville Rd. Park, Sheffield. English. Senior Science Master, Firth Park Secondary School, Sheffield. (*Signed by*) C. K. Ingold, John Evans, A. S. Russell.

ROBERTSON, GEORGE JAMES, M.A., B.Sc., Ph.D., The Manse, Strathkinness,

St. Andrews, Fife. British. Assistant in Chemistry and Carnegie Teaching Fellow in the University of St. Andrews. A thesis entitled "Investigations on Cellulose." Conjoint paper read by Principal Irvine before the American Chemical Society. (*Signed by*) J. C. Irvine, John Read, G. M'Owan.

SALMON, ROBERT JOSEPH, C.M.S. Medical Training College, Hangchow, Chekiang, China. British. Lecturer in Chemistry, Medical Training College, Hangchow. M.Sc. Manchester. (*Signed by*) Arthur Lapworth, Frederick Challenger, John F. Wilkinson, Harold Mastin, D. H. Bangham, Fred Fairbrother.

SHEPHERD, JOHN ROBERT, Lady Hall Farm, Broughton-in-Furness, Lancs. British. Chemist. M.Sc. (London) in Chemistry. A.I.C. (*Signed by*) Robert H. Pickard, J. Kenyon, J. L. White, A. Houssa, Harold Hunter.

SINGH, TERRAIN, alias PREM CHANDRA SHARMA, Engineering College Hostel, Benares Hindu University. Indian. M.Sc. Demonstrator in the Department of Industrial Chemistry of B.H.U. M.Sc. of the Benares Hindu University with a thesis on "The Effect of the Size of the Soil-particles and Electrolytes on the Equilibrium of Moisture between the Seed and the Soil." (*Signed by*) Phuldeo Sahay Varma, S. S. Bhatnagar, N. R. Dhar.

SMITH, ALAN LAWRENCE, Bank House, 22, Dean St., Blackpool. British. *Trans. Chem. Soc.*, 1923, 123, 1046-1055, "The Interaction of Hydrogen Sulphide, Thiocyanogen and Thiocyanic Acid on Unsaturated Compounds." M.Sc., Victoria University. (*Signed by*) Henry Stephens, Frederick Challenger, F. P. Burt, D. H. Bangham, Fred Fairbrother, John F. Wilkinson.

THORN, GEORGE, Grove House, Beechen Grove, Watford. British. Science Master, Boys' County School, Harrow. B.Sc. (Bristol). (*Signed by*) F. Francis, J. W. McBain, F. W. Rixon.

TOWNSEND, LEONARD WILLIAM ERNEST, 35, Harewood Rd., Collier's Wood, Merton, S.W. 19. British. Assistant Chemist at the South Metropolitan Gas Co., 709, Old Kent Rd., S.E. Student, five years' laboratory training. (*Signed by*) S. Medsforth, E. de Barry Barnett, P. C. L. Thorne.

WALKER, LESLIE JOHN, 45, Devereux Road, Wandsworth Common, S.W. 18. British. Student at the School of Pharmacy of the Pharmaceutical Society of Gt. Britain, 17, Bloomsbury Sq., W.C. 1. Pharmacist, have passed Qualifying Exam. of Pharmaceutical Society of Gt. Britain. Chemistry is included in this Exam., and it is my intention to continue studies in same. At present studying for Major Exam. of Pharmaceutical Society. (*Signed by*) C. E. Corfield, F. Browne, F. H. Lowe.

WALKER, THOMAS KENNEDY, 4, Swythamley Road, Cheadle Heath, Stockport. British. Research Chemist to the Institute of Brewing, Research Scheme Committee. Degrees: M.Sc., Ph.D., Victoria University of Manchester. Fellow of the Institute of Chemistry. Two years' research for the Admiralty, and for two years as Assistant Chemist to Sir R. Robertson, F.R.S., in the Research Department, Royal Arsenal, Woolwich. Three years' research in Organic Chemistry with Professor A. Lapworth, F.R.S., at Manchester University. For the past three years I have been assisting Professor F. L. Pyman, F.R.S., in investigations on the preservative principles of hops under the Institute of Brewing Research Scheme. Publications: "Preparation of Sodium Ethoxide from Caustic Soda" (*Journ. Soc. Chem. Ind.*, 1921, 40, 172r); "Condensation of Aryldiazonium Salts with Mono-alkylated Malonic Acids" (*J.*, 1923, 123, 2775); "Condensation of Aryldiazonium Salts and of Alkyl Nitrites with Cyanoacetic Acid Derivatives" (*J.*, 1924, 125, 1622); five other papers dealing with the antiseptics of hops, of which one was published jointly with Professor Pyman and Harold Roger.

son, Esq. (*Journ. Inst. Brew.*, 1922, 19, 929; 1923, 20, 373; 1924, 21, 570, 712). (*Signed by*) Frank Lee Pyman, Fredk. M. Rowe, Jas. Grant.

WATERS, WILLIAM ALEXANDER, 35, Shirley Road, Cardiff. British. Research Student in Chemistry (Resident B.A. of Gonville and Caius College, Cambridge). Cambridge Natural Sciences Tripos, Part I, Class I, Cambridge Natural Sciences Tripos, Part II (Chemistry), Class I. Shuttleworth Research Studentship in Chemistry at Caius College, Cambridge. (*Signed by*) Hamilton McCombie, Harold A. Scarborough, Eric K. Rideal.

WATSON, JAMES BERNARD, 30, Mulgrave Road, West Hartlepool. British. Metallurgical Chemist. Four years in the laboratory of the Technical College, West Hartlepool. Seven years as chemist in the Chemical and Metallurgical laboratory of the Central Marine Engine Works, West Hartlepool. (*Signed by*) J. W. Patterson, Gilbert Palmer, D. Arthur Ruell.

WATTS, ERNEST SWANN, "Eaglesfield," Limefield Road, Kersal, Manchester. British. Chief Chemist, E. Griffiths Hughes, Ltd., Manchester. Qualifying Examination of the Pharmaceutical Society of Great Britain. (*Signed by*) S. Ernest Melling, Harry Brindle, Chas. Turner.

WHAMOND, ARCHIBALD STEELE, 22, Church St., Alloa, Clackmannanshire. British. Analytical Chemist. Studied Chemistry at Heriot Watt College, Edinburgh, Day and Evening Classes, 1911-1914. March 1914-Nov. 1923, Assistant Chemist, Messrs. Wm. McEwan & Co., Ltd., Edinburgh (Army Service, Sept. 1914-Jan. 1919). Nov. 1923-present time, Chief Chemist, Messrs. Geo. Younger & Son, Ltd., Alloa. (*Signed by*) John M. Guthrie, A. Scott Dodd, John Doull.

WOODCOCK, EDWIN JOHN, "Stonecot," Claremont Hill, Jersey, C.I. British. Assistant Official Analyst. For the past 28 years Assistant to F. W. Toms, Esq., F.I.C., Official Analyst of Jersey, namely, the first five years as private assistant and since then as senior assistant analyst to the States of Jersey. (*Signed by*) F. W. Toms, Bernard Dyer, Alex. K. Miller, F. G. P. Remfry, G. Neville Huntly, R. Le Rossignol.

WORTHINGTON, JOHN STANLEY, 27, Rowena St., Great Lever, Bolton. British. Works Chemist. Experience in manufacture of Heavy Chemicals at Messrs. John Smith Junr. & Co., Ltd., Great Lever Chemical Works, Bolton, since 1908. Student in Advanced Chemical Tech. at Manchester College of Technology. At present have control of large Sulphuric Acid Plant. (*Signed by*) Arthur Worthington, Frank Lee Pyman, T. Trevor Potts.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2):

BELL, JAMES MUNSIE, Dept. of Chemistry, Univ. of North Carolina, Chapel Hill, N.C., U.S.A. Canadian. Professor of Chemistry. Head of Chemical Department, University of N. Carolina. Formerly in Bureau of Mines, Washington, D.C., U.S.A. Numerous original publications, chiefly in the *Journal of the American Chemical Society*. (*Signed by*) James W. McBain.

CAMERON, JOHN, Peking Union Medical College, Peking, Chihli, North China. British (Scotch). Pharmacist to the above-named institution. Member of the Pharmaceutical Society of Great Britain. Publications as per attached list to date (17 articles). Instructor in Pharmacy in British Army in France, 1917-18. Lecturer in Pharmacy and *Materia Medica* in Peking Union Medical College, 1920-25. (*Signed by*) A. E. Newland.

McINTYRE, GORDON, Sarnia, Ontario, Canada. Canadian. Chemist and Petroleum Technologist. Graduate McGill University, B.Sc., Ch.E. Chief

Chemist, Imperial Oil Refineries, Limited. (*Signed by*) Alfred Stansfield, Harold J. Roast.

THOMAS, Professor KARL, M.D., Leipzig, Liebig str. 16. German. Professor ordinar. für physiologische Chemie an der Universität, Leipzig, seit 1921. Mitarbeiter von Hoppe-Seylers Zeitschrift für physiologische Chemie (herausgegeben v. Kossel) und der Biochemischen Zeitschrift (herausgegeben von Neuberg). Schüler von W. Wislicenus, H. Thierfelder und Max Rubner, Mitglied der Biochemical Society. (*Signed by*) George Barger, Robert Robinson.

## ADDITIONS TO THE LIBRARY.

### I. Donations.

DUPARC, LOUIS, and BASADONNA, M. Manuel théorique et pratique d'analyse volumétrique. 2nd edition. By LOUIS DUPARC and PAUL WENGER. Paris 1925. pp. 214. ill. 18 fr. (*Recd.* 18/3/25.)

From the Publisher: M. Payot.

FRANZEN, HANS. Margarine. (Chem. Tech. in Einzeldarstellungen.) Leipzig 1925. pp. viii + 100. ill. Gm. 10. (*Recd.* 31/3/25.)

# PROCEEDINGS

## OF THE

### CHEMICAL SOCIETY.

Ordinary Scientific Meeting, Thursday, May 7th, 1925, at 8 p.m.,  
Professor J. C. PHILIP, O.B.E., D.Sc., F.R.S., Vice-President, in  
the Chair.

The CHAIRMAN referred to the loss sustained by the Society,  
through death, of the following Fellows :

	Elected.	Died.
Edward Wightman Bell .....	June 20th, 1889.	Jan. 29th.
Arthur Boake .....	Dec. 2nd, 1875.	April 12th.
William Dugdale Harland .....	Feb. 7th, 1878.	April 23rd.
Sir David L. Salomons .....	May 4th, 1876.	April 19th.
George Young .....	Dec. 4th, 1890.	April 3rd.

The CHAIRMAN announced :

1. That the following address of congratulation had been sealed  
and would be presented to the Royal University of Pavia on the  
occasion of the Centenary Celebrations of that University which  
were being held from May 20th to 22nd, 1925 :

*To the Rector, Senate, Professors, and Alumni  
of the Royal University of Pavia  
from The Chemical Society.*

The Chemical Society sends cordial greetings and felicitations  
to the illustrious University of Pavia on the completion of no less  
than eleven centuries of high service to mankind.

As representatives of a Science rooted in antiquity, we gratefully  
acknowledge the debt we owe to the members of your University  
who throughout the ages preserved ancient learning and extended  
the boundaries of knowledge, giving to us our heritage. We do  
not forget that the celebrated Lanfranc, one of your earliest and  
greatest teachers, carried the torch of learning to our country as  
Archbishop of Canterbury. Since her foundation the University  
of Pavia has given to the world many men distinguished for learning

and science—Alexander Volta, who pointed out new paths which now we follow, Camillus Golgi, the great neurologist, and many others whose genius we gratefully acknowledge.

We join with those who will be hastening from all parts of the world to lay before you their tribute of praise, and we hope that in the future renewed prosperity will be added to your illustrious past.

Signed on behalf of the Chemical Society.

ARTHUR W. CROSSLEY, *President*.

JOCELYN THORPE, *Treasurer*.

T. SLATER PRICE, } *Secretaries*.

C. S. GIBSON, }

F. G. DONNAN, *Foreign Secretary*.

Sealed this Seventh day of May, One Thousand Nine Hundred and Twenty Five.

2. That a copy of the works of the late Walthère Spring had been presented to the Library by the Belgian Chemical Society, and that this volume can be purchased from Monsieur J. Wauters, Secrétaire, Société Chimique de Belgique, 83, Rue Souveraine, Brussels, price 40 francs, post free.

The following were formally admitted Fellows of the Chemical Society: Alan D. Whitehead, Stuart R. Parsons, Leslie S. Theobald, J. F. J. Rule, and A. H. B. Bishop.

Certificates were read for the first time in favour of:

Maung Hla Baw, R-1, 64th Street, Danneedaw, Rangoon.

Joseph John Blackie, c/o Messrs. Duncan, Flockhart & Co., 104, Holyrood Road, Edinburgh.

Samuel Cyril Blacktin, M.Sc., 173, Ecclesall Road South, Sheffield.

Nirmal Boran Brohmachary, B.Sc., Ghugudanga-Post, 24, Porganas, Calcutta.

Gertrude Margaret Bullick, B.Sc., 43, Belsize Park, Hampstead, N.W. 3.

Ralph Edgar Cable, Queen's Gardens, Hong Kong.

Leslie Marshall Clark, B.A., Ph.D., A.I.C., 38, Park Road, Hampton Wick.

Clive Kear Colwell, B.A., Ormesty, Great North Road, N. 2.

Jan Coops, 25, Sireelinkplein, The Hague, Holland.

William George Corderoy, B.Sc., 35, Century Road, Walthamstow, E. 17.

Oswald Pilkington Cronshaw, 141, Blackburn Road, Great Harwood, Blackburn.

John Alexander Currie, B.A., B.Sc., 44, Phillimore Gardens, W. 8.

Thomas Dillon, University College, Galway.

Octave Charles Marie Dony, 30, Rue Émile Banning, Brussels.

William Edward Gibbs, D.Sc., 4, Stanley Villas, Runcorn.

Ernest Hartshorne, B.Sc.Tech., 12, Muriel Street, Broughton.

Arthur Harvey, 12, Chaldon Road, Fulham, S.W. 6.

Charles Richard Hennings, Ph.D., 19, St. Dunstan's Hill, E.C. 3.

Noel Waterman Vere Jones, Eastnook, Pakefield, Lowestoft.

Frank William Lynch, M.Sc., F.I.C., 89, Hazelbottom Road, Cheetham, Manchester.

Charles Lipshaw, 48, Lower Broughton Road, Salford.  
 James Arthur Prescott, The University, Adelaide.  
 Malik Karam Singh, B.Sc., Rawalpindi City, India.  
 Norman Heath Smith, B.Sc., Anglo-Persian Oil Co., Ltd., Abadan.  
 John Thurgood, B.Sc., Roseleigh, Elmwood Avenue, Harrow.  
 Shojiro Uchida, 12, Shinryudo-Machi, Azabu-Ku, Tokio.  
 John Henry Walker, A.I.C., Gourepore Works, Naihati, E.B.Ry., Bengal.

Messrs. H. Burton and J. N. Sugden were elected Scrutators, and a ballot for the election of Fellows was held, the following subsequently being declared elected as Fellows :

James Munsie Bell.	David Bret Jehu, M.Sc., A.I.C.
Niels Janniksen Bjerrum.	William Jobson.
Archibald Beresford Blunsden.	Clifford Merton Jones, B.Sc.
Geoffrey Alger Blyde.	Thomas William Jones, B.Sc.
Thomas Henry Bowles.	John Keane, M.Sc., Ph.D.
William Harrison Brindley, M.C., M.A., M.Sc.Tech., A.I.C.	Alfred Lucy.
James Lindsay Buchan, B.Sc.	Ernest Edward Mabbott, B.Sc.
Frank Henry Charles Bull, B.Sc., A.I.C.	David McDowall.
John Alfred Valentine Butler, M.Sc.	Gordon McIntyre, B.Sc., Ch.E.
Annie Lavinia Byford, B.Sc.	Richard H. F. Manske, M.Sc.
John Cameron.	Hugh Clouston Moir, B.Sc., A.I.C.
James Herbert Clegg.	Richard Alan Morton, B.Sc., Ph.D., A.I.C.
Horace Cecil Cockroft, B.Sc., A.I.C.	Frederick Wilson Moulds.
Francis Xavier Coyne.	Andrew Joseph Myles.
James Craik, M.A., B.Sc., Ph.D.	Alfred William Nash, B.Sc.
Herbert Greetham Dane, M.Sc.	Henry Bowen Oakley, M.Sc., A.R.C.S.
Harry Dean.	Edgar Kent Palmer, B.Sc.Tech.
Margaret Stedman Leonora Dixon.	David Pomerantz.
Robin George Westbury Farnell, A.R.C.S., A.I.C.	Harry Rawlings, B.Sc.
Irvine John Faulkner.	John Brent Reed, B.Sc., A.I.C.
Thomas Flett, B.Sc., A.I.C.	William George Rhodes.
Thomas James Elijah Gardner.	George James Robertson, M.A., B.Sc., Ph.D.
Richard Randolph Garrahan, B.Sc.	Robert Joseph Salmon, M.Sc.
John Charles Gilbin, B.Sc., A.I.C.	Prem Chandra Sharma, M.Sc.
Helen Simpson Gilchrist, B.Sc., Ph.D.	John Robert Shepherd, M.Sc., A.I.C.
Isabel Hodgson Hadfield, M.Sc.	Alan Lawrence Smith, M.Sc.
James Francis Halpin, F.I.C.	Karl Thomas, M.D.
Donald Hanson.	George Thorn, B.Sc.
Thomas Haworth.	Leonard William Ernest Townsend.
John Stanley Heaton, B.Sc., Ph.D.	Leslie John Walker.
John Cyril Hensman, M.A., A.I.C.	Thomas Kennedy Walker, M.Sc., Ph.D., F.I.C.
Joseph Hill.	William Alexander Waters, B.A.
Frederick Denison Maurice Hocking, M.Sc., A.I.C.	James Bernard Watson.
Jim Hoyle.	Ernest Swann Watts.
Horace William Hughes, B.Sc.	Archibald Steele Whamond.
Joseph Taylor Jackson, B.Sc.	Edwin John Woodcock.
	John Stanley Worthington.

The following papers were read :

- "The tautomerism of dyads. Part III. The effect of the triple linking on the reactivity of neighbouring atoms." By Mrs. E. H. INGOLD.
- "The rotatory dispersive power of organic compounds. Part XVI. Halogen-derivatives of camphor." By J. O. CUTTER, H. BURGESS, and T. M. LOWRY.
- "The isomerism of the oximes. Part XXII. The configuration of the aldoximes." By O. L. BRADY and G. BISHOP.
- "The parachor and chemical constitution. Part I. Polar and non-polar valencies in unsaturated compounds." By S. SUGDEN, J. B. READ, and H. WILKINS.
- "The tautomerism of dyads. Part IV. New evidence of the tautomeric mobility of oximes." By J. P. GRIFFITHS and C. K. INGOLD.

Ordinary Scientific Meeting, Thursday, May 21st, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., Vice-President, in the Chair.

The CHAIRMAN referred to the loss sustained by the Society, through death, of the following :

	Elected.	Died.
Albin Haller (Honorary Fellow) .....	Feb. 6th, 1908.	May 1st.
Samuel Henry Davies .....	Feb. 15th, 1894.	May 9th.
John Mylne Mullaly .....	May 4th, 1922.	May 4th.

It was also announced that the Celebration of the Centenary of Faraday's discovery of benzene, which is being arranged by the Royal Institution in association with the Chemical Society, the Society of Chemical Industry, and the Association of British Chemical Manufacturers, will take place at the Royal Institution on Tuesday, June 16th, 1925. In the morning, at eleven o'clock, there will be a reception by the Duke of Northumberland of English and foreign delegates, and several short addresses will be delivered commemorative of Faraday's chemical work. In the evening, a banquet will be held in the Goldsmiths' Hall, the price of the tickets being £2 2s. each, including wine. Application for tickets for the reception and for the banquet, which are limited in number, should be made to the Secretary, The Royal Institution, Albemarle Street, W. 1.

Mr. H. G. Dane was formally admitted a Fellow of the Chemical Society.

Certificates were read for the first time in favour of :

Marion Alice Battie, B.Sc., A.I.C., The Orchard, Ivy Lane, Woking.  
 William Ambler Berry, B.Sc., 19, Blakeney Road, Sheffield.

Thomas Anthony Canning, Crindau Gas Works, Newport, Mon.  
 John Carroll Culbert, 172, North Road, Belfast.  
 Alexander John Dey, F.R.S.E., Rothiemay, Corstorphine, Edinburgh.  
 Stanley James Featherston, 33, Belmont Road, Beckenham.  
 James Hindle, 4, Plane Street, Blackburn.  
 Thomas Moore, B.Sc., 8, Cyprus Avenue, Belfast.  
 Alexander John Morrison, Testing Branch, Public Works Department,  
 Sydney, N.S.W.  
 Frank Richard Morrison, Brae Street, Waverley, Sydney, N.S.W.  
 Ernest Charles Padgham, 30, Churchill Road, N.W. 2.  
 John Monteath Robertson, B.Sc., A.I.C., The Chemistry Department, The  
 University, Glasgow.  
 Ernest Henry Warren, B.A., 1, Chamber's Lane, Willesden Green, N.W. 10.  
 James Watt, F.R.S.E., Craiglockhart House, Slateford, Edinburgh.  
 William John Willis, Hazel Mount, Carnforth.

The following Certificates have been authorised by the Council  
 for presentation to ballot under Bye-Law I (2) :

Howard Ecker, 1510, Dana Avenue, Cincinnati, Ohio, U.S.A.  
 William Beesley, Binnyston Gardens, Bangalore, India.  
 Alexander Smith, P.O. Box 103, Nairobi, Kenya Colony.

The following papers were read :

- "The rotatory dispersion of derivatives of tartaric acid. Part II.  
 Acetyl derivatives." By P. C. AUSTIN and J. R. PARK.
- "The stability of additive compounds between esters and acids."  
 By J. KENDALL and J. E. BOOGE.
- "Additive compounds in the ternary system, acid-ester-water."  
 By J. KENDALL and C. V. KING.
- "A spectroscopic study of the combustion of phosphorus trioxide  
 and of phosphine." By H. J. EMELÉUS.
- "The nature of the alternating effect in carbon chains. Part III.  
 A comparative study of the directive efficiencies of oxygen and  
 nitrogen atoms in aromatic substitution." By E. L. HOLMES  
 and C. K. INGOLD.

### LIST OF FELLOWS, 1925.

It has been decided to print the List of Fellows for 1925 and  
 to supply the List to those Fellows who make application to the  
 Assistant Secretary by the 31st July, 1925.

### BERICHTE, 1915 to 1924.

Sets of the Berichte from 1915 to 1924 (10 years) are now offered  
 to Fellows of the Society at £22, carriage extra. Application should  
 be made to Mr. S. E. Carr.

List of Papers, or Abstracts thereof, received between April 3rd and May 21st, 1925. (This List does not include the titles of papers which have been read at a Scientific Meeting, or which have appeared in the Journal.)

"The ionisation of aromatic nitro-compounds in liquid ammonia."

By M. J. FIELD, W. E. GARNER, and C. C. SMITH.

" $\alpha$ -Acenaphthoquinoline." By J. STEWART.

"Alcohols of the hydroaromatic and terpene series. Part IV.

$\alpha$ - and  $\beta$ -Fenchyl alcohols and some esters derived therefrom." By J. KENYON and H. E. M. PRISTON.

"Perkin's reaction." By T. HOPKINS.

"Action of zinc alkyl halides on nitric esters." By T. HOPKINS.

"Polynuclear heterocyclic aromatic types. Part II. Some anhydronium bases." By J. W. ARMIT and R. ROBINSON.

" $\beta$ -Piperonylpropionitrile and some derived substances." By W. BAKER and R. ROBINSON.

"The melting points of benzene derivatives." By T. BEACALL.

"Nitrosation of phenols. Part II. 3-Bromo-, 2-bromo-, 3-iodo-, and 2-iodo-phenols, with evidence favouring the nitroso form for 4-nitroso phenol." By H. H. HODGSON and F. H. MOORE.

"The Kekulé formula for benzene and the existence of isomeric ortho disubstitution products." By H. H. HODGSON and J. H. WILSON.

"A new method of diagnosing potential optical activity. Part I. The optical activity of chlorobromomethanesulphonic acid." By J. READ and A. M. McMATH.

"The carboxy-phenyl camphoramic acids." By M. SINGH and R. SINGH.

"A simplified method of micro-combustion: the micro-Dennstedt method." By C. FUNK and S. KON.

"Interfacial tension." By J. R. POUND.

"Low temperature oxidation at charcoal surfaces. Part I. The behaviour of charcoal in the absence of promoters." By E. K. RIDEAL and W. M. WRIGHT.

"Osmotic pressure by the solubility method in concentrated solutions." By M. P. APPLEBEY and P. G. DAVIES.

"Synthetical experiments in the naphthyridine groups." By J. M. GULLAND and R. ROBINSON.

"Chlorobenzothiazole dibromide." By R. F. HUNTER.

"Note on the action of sodium of chlorobenzothiazole." By R. F. HUNTER.

"Investigations into the analytical chemistry of tantalum, niobium, and their mineral associates. Part III. A new method for

- the separation of tantalum from niobium. Part IV. The detection and determination of tantalum in niobium compounds." By A. R. POWELL and W. R. SCHOELLER.
- "The conditions underlying the formation of unsaturated and cyclic compounds from halogenated open-chain derivatives. Part VII. The influence of the phenyl group on the formation of the *cyclopropene* ring." By W. HAERDI and J. F. THORPE.
- "Rapid determination of copper and iron in mixtures of their salts." By A. S. RUSSELL.
- "The bromination of 4'-amino-1-phenyl-5-methyl benzothiazole and of 1:1-bisbenzothiazole." By R. F. HUNTER.
- "Amino benzothiazoles. Part I. 1-Phenylamino benzothiazole and its homologues." By R. F. HUNTER.
- "The directing influence of the methane sulphonyl group." By R. F. TWIST and S. SMILES.
- "The dissociation constants of selenious acid." By J. S. WILLCOX and E. B. R. PRIDEAUX.
- "The velocity of benzylation of certain amines. Part II." By D. H. PEACOCK.
- "Measurements of energy absorption of certain photo-chemical reactions with iodine." By B. K. MUKERJI and N. DHAR.
- "The action of hydrogen peroxide on limonene." By J. SWORD.
- "Synthetical experiments in the *isoquinoline* group. Part I." By R. D. HAWORTH and W. H. PERKIN.
- "Synthetical experiments in the *isoquinoline* group. Part II." By R. D. HAWORTH, W. H. PERKIN, and J. RANKIN.
- "Synthetical experiments in the *isoquinoline* group. Part III." By R. D. HAWORTH and W. H. PERKIN.
- "Synthetical experiments in the *isoquinoline* group. Part IV." By R. D. HAWORTH and W. H. PERKIN.
- "Synthesis of  $\psi$ -protoberberine and  $\psi$ -protopapaverine." By J. S. BUCK, W. H. PERKIN, and T. S. STEVENS.
- "Note on a laboratory method of preparing *p*-benzoquinone." By R. CRAVEN and W. A. T. DUNCAN.
- "Hydroxybenzils." By J. T. MARSH and H. STEPHEN.
- "Researches on sulphuryl chloride. Part III. Influence of catalysts on the chlorination of toluene." By O. SILBERRAD, C. A. SILBERRAD, and B. PARKE.
- "The adsorption of water from the gas phase on plane surfaces of glass and platinum." By I. R. MCHAFFIE and S. LENHER.
- "The action of phosphorus pentachloride on 2-isonitroso-1-hydrindones." By R. D. HAWORTH and H. S. PINK.
- "Oxidation products of oleic acid. Part I. Conversion of oleic acid into dihydroxystearic acid and the determination of the

- higher saturated acids in mixed acids from natural sources." By A. LAPWORTH and E. N. MOTTRAM.
- "The spatial structure of *cycloparaffins*. Part I. A new aspect of Mohr's theory and the isomerism of decahydronaphthalene." By W. A. WIGHTMAN.
- "The absorption spectra of the vapours of anthracene and anthraquinone, phenanthrene, and phenanthraquinone, and other quinones." By J. E. PURVIS.
- "Investigations on the dependence of rotatory power on chemical constitution. Part XXVII. Some esters of *p*-toluene-sulphonic and -sulphinic acids." By H. PHILLIPS.
- "Oxidations in turpentine and olive oil." By E. WALKER.
- "Colour and molecular geometry. Part IV. Explanation of the colours of the cyanine dyes." By J. MOIR.
- "The surface tensions of aqueous phenol solutions. Part II. Activity and surface tension." By A. K. GOARD and E. K. RIDEAL.
- "Triad groups in complexes of octahedral symmetry." By J. D. M. SMITH.
- "Isoquinoline derivatives. Part IX. Preparation and reduction of isoquinoline and its derivatives." By R. FORSYTH, C. I. KELLY, and F. L. PYMAN.
- "The nitration of *m*-meconine." By J. N. RÂY and R. ROBINSON.
- "Chenopodium oil. Part II. The hydrocarbon fraction." By T. A. HENRY and H. PAGET.
- "The amino- $\gamma$ -pyridones." By W. H. CROWE.
- "Studies of the glucosides. Part III. The synthesis of thioindican." By J. CRAIK and A. K. MACBETH.
- "The reduction of the bromoanthraquinones." By E. DE B. BARNETT and J. W. COOK.
- "The chlorination of acetanilide and the chloroamine-chloroanilide transformation." By F. G. SOPER.
- "The thermal decomposition of ozone." By R. O. GRIFFITH and A. McKEOWN.
- "Studies of electrolytic polarisation. Part III. The diffusion layer." By S. GLASSTONE.
- "Theories of polar and non-polar free affinities. A practical and theoretical reply to some recent criticisms and comparisons." By G. N. BURKHARDT and A. LAPWORTH.
- "The reaction between sodium hypobromite and urea." By M. B. DONALD.
- "Echitamine." By J. A. GOODSON and T. A. HENRY.
- "The preparation of phthalamic acids and their conversion into anthrenilic acids." By E. CHAPMAN and H. STEPHEN.

- "An X-ray examination of maleic and fumaric acid." By K. YARDLEY.
- "The estimation of arsenic in organic compounds." By G. NEWBERRY.
- "The bromination of acyl derivatives of phenylhydrazine: the preparation of 2:4-dibromophenylhydrazine." By J. E. HUMPHRIES and R. EVANS.
- "The system chromium trioxide-boric acid-water." By L. F. GILBERT.

CERTIFICATES OF CANDIDATES FOR ELECTION AT  
THE BALLOT TO BE HELD AT THE ORDINARY  
SCIENTIFIC MEETING ON THURSDAY, JUNE 18TH,  
1925.

BATTIE, MARION ALICE, The Orchard, Ivy Lane, Woking, Surrey. British. Post-graduate student. B.Sc. Honours (Chemistry), Class II. Associate of the Institute of Chemistry. (*Signed by*) T. S. Moore, Mary Boyle, S. Smiles.

BAW, MAUNG HLA, R-1, 64th Street, Danneadaw, Rangoon. Burmese. Analytical Chemist, Messrs. E. M. D'Souza & Co., Rangoon, and Science Master, St. John's College, Rangoon. Passed the Intermediate Examination in Science of the Calcutta University in 1916, taking Chemistry, Physics, and Mathematics. Process Chemist (1916 to 1921) at the Seikkyi Refinery of Messrs. The Indo Burma Petroleum Co., Ltd.; and Process Chemist (1922) in the acid works of The Burma Chemical Industries, Ltd. Process Chemist (1923) with The Rangoon Pharmaceutical and Chemical Works, Rangoon. Since 1924 chemist in charge of the analytical laboratory of Messrs. E. M. D'Souza & Co., Rangoon, and Science Master, St. John's College, Rangoon. (*Signed by*) Maung Tun Tin, Maung Ba, Maung Ba San.

BERRY, WILLIAM AMBLER, 19, Blakeney Rd., Sheffield. British. Research Student at University of Sheffield. B.Sc., Hons. Chem., 1924. Joint author with Dr. G. M. Bennett of the Note, *J.C.S.*, 1925, 127, 910. (*Signed by*) W. P. Wynne, T. M. Lowry, G. M. Bennett, F. G. Tryhorn.

BLACKIE, JOSEPH JOHN, c/o Duncan, Flockhart & Co., 104, Holyrood Road, Edinburgh. British. Pharmaceutical Chemist. Minor and Major Examination, Pharmaceutical Society of Great Britain. Laboratory Manager of Messrs. Duncan, Flockhart & Co., Manufacturing Chemists, Edinburgh. Examiner in Chemistry of the Pharmaceutical Society of Great Britain. (*Signed by*) George Barger, William Duncan, Eric Knott.

BLACKTIN, SAMUEL CYRIL, 173, Ecclesall Road South, Sheffield. British. Research Assistant. (Junior Assistant, Safety in Mines Research Laboratories, Badger Lane, Sheffield.) M.Sc. (Sheffield). (*Signed by*) W. P. Wynne, F. G. Tryhorn, J. Kenner.

BLIGH, NEVILLE MELTON, 67, Castle Road, Bedford. British. Science Master. A.R.C.S. (Chemistry), London, 1921. A.I.C., 1923. Formerly Senior Science Master, Wimborne Grammar School, Dorset. At present (Temporary) Senior Science Master, Stevenage Grammar School, Herts. (*Signed by*) H. B. Baker, James C. Philip, M. A. Whiteley.

BORLAND, HUGH ALEXANDER MILLAR, 14, Cotham Road, Bristol. British.

Teacher of Chemistry. A.R.C.S. (Lond.). M.Sc. (Bristol). Lecturer on Chemistry 1896 to present date (Secondary and Technical). Lecturer on Applied Chem., University of Bristol, 1910-19. (*Signed by*) Arthur Marsden, F. Francis, J. W. McBain, F. W. Rixon.

BROHMACHARY, NIRMAL BORAN, Ghugudanga-Post 24 Porganas, Calcutta, India. Hindu (Indian). Chemist to Messrs. B. K. Paul's Chemical and Pharmaceutical Works, Dum Dum, Calcutta. Passed the B.Sc. examination of the Calcutta University in 1920. Worked as an analytical and manufacturing chemist. Assistant of Messrs. Smith, Stanistreet & Co. for 2 years, and at present working as the Chemist for Messrs. B. K. Paul & Co. (for last three years). (*Signed by*) Dharendra Nath Mukerji, Sudhindranarayan Ray, R. L. Jenks.

BULLICK, GERTRUDE MARGARET, 43, Belsize Park, Hampstead, N.W. 3. British. Hons. Student in Chemistry, Bedford College, Univ. of London. Graduate of Lond. Univ. B.Sc., June, 1924. (*Signed by*) Holland Crompton, J. F. Spencer, M. S. Crewdson, J. Stewart.

CABLE, RALPH EDGAR, Queen's Gardens, Hong Kong. English. Apothecary, Medical Department, Hong Kong. Lecturer (part time), University of Hong Kong, Med. Faculty, Practical Pharmacy. (*Signed by*) R. W. E. Stickings, A. J. Ewins, G. Newbery, P. Blenkinsop.

CANNING, THOMAS ANTHONY, Crindau Gas Works, Newport, Mon. English. Gas and Chemical Engineer, now General Assistant Technical Engineer to the Newport (Mon.) Gas Company. Certificates in Chemistry granted by Institution of Gas Engineers. Engaged 7 years in Gas Manufacture and allied work and the chemistry of same. I desire to become a Fellow of the Chemical Society in order to keep in touch with current chemical literature. (*Signed by*) Geo. R. Thompson, H. E. Cox, J. H. Canning.

CLARK, LESLIE MARSHALL, 38, Park Rd., Hampton Wick, Kingston-on-Thames. English. Chemist, National Physical Laboratory, Teddington. Late Scholar and Research Scholar, Sidney Sussex College, Cambridge. Late Assistant Demonstrator, Cambridge University Chemical Laboratory. B.A., Cantab. Ph.D., London. Associate of Institute of Chemistry. Joint author of papers in *J.C.S.*, 1923, 123, 2353, and 2362. (*Signed by*) M. Johnson, Guy Barr, Percy G. Ward.

COLWELL, CLIVE KEAR, Ormesty, Great North Road, N. 2. English. Analytical and Consulting Chemist. B.A., Cantab. Paper in conjunction with A. J. Berry, M.A., in Chemical News. (*Signed by*) A. H. M. Muter, Cyril Dickinson, J. Kear Colwell.

COOPS, JAN, den Haag, 25 Sireelincplein. Dutchman. Dr. ir. Delft, Assistant, Commercial University, Rotterdam. Author of some papers in *Rec. trav. chim.*, 1920, 1921, 1922, 1923, 1924, 1925, *Chem. Weekblad*, and *Kon. Akad. van Wet. Amsterdam*, etc. (*Signed by*) H. J. Backer, Ernest Cohen, A. Smits.

CORDEROY, WILLIAM GEORGE, 35, Century Rd., Walthamstow, E. 17. British. Student for Teaching Profession (entering profession next Sept.). 1st Honours (Chem.), B.Sc. (Lond.). [Studied at East London College, 1921-24.] (*Signed by*) J. R. Partington, E. E. Turner, D. C. Jones, Elwyn Roberts.

CRONSHAW, OSWALD PILKINGTON, 141, Blackburn Road, Great Harwood, near Blackburn. British. Chemist and Assistant Gas Engineer, Accrington District Gas and Water Board. For past 3 years Chief Chemist to the Accrington District Gas and Water Board, having full chemical control of all gas manufacturing operations, the manufacture of sulphate of ammonia,

etc. Hold 1st Class Certificates Gas Manufacture (City and Guilds). Distinction in Inorganic Chemistry (Lanc. and Cheshire Inst.). 1st Class Certificate Inorganic and Organic Chemistry at Blackburn College of Technology. Associate Member of Institution of Gas Engineers. (*Signed by*) James Booth, John S. Morrison, Robert C. McDowall.

CULBERT, JOHN CARROLL, 172, North Road, Belfast. British. Pharmacist. Pharmaceutical Chemist, Member of Pharm. Society of Ireland, ex-Member Council of Pharm. Society of Ireland. (*Signed by*) George Scott Robertson, W. H. Gibson, Henry Wren.

CURRIE, JOHN ALEXANDER, 44, Phillimore Gardens, London, W. 8. British. Student. Honours B.A., Chemistry, and B.Sc., Oxford. Now researching under Professor Donnan at University College, London. (*Signed by*) F. G. Donnan, W. E. Garner, C. W. Bonnicksen.

DEX, ALEXANDER JOHN, Rothiemay, Corstorphine, Edinburgh. British. Manufacturing Chemist. Managing Director, T. and H. Smith, Ltd., Manufacturing Chemists. F.R.S.E. (*Signed by*) James Walker, Alex. C. Cumming, Alexander Lauder.

DILLON, THOMAS, University College, Galway. Irish. Professor of Chemistry, University College, Galway. Papers on Waxes, *Proc. R.D.S.*, 1909, vol. 12, No. 20; vol. 15, No. 10; *Proc. R.I.A.*, vol. 29, sec. B, No. 8. On separation of Isotopes of Lead, *Proc. R.D.S.*, 1922, vol. 17, p. 53. (*Signed by*) A. G. G. Leonard, Sydney Young, Emil A. Werner, A. O'Farrelly.

DONY, OCTAVE CHARLES MARIE, Bruxelles, 30 Rue Emile Banning. Belge. Professeur à l'Université de Bruxelles (Faculté de Science appliquées). Membre de l'Académie royale de Belgique. (*Signed by*) C. S. Gibson, Eric K. Rideal, T. M. Lowry, W. J. Pope, Henry E. Armstrong.

FEATHERSTON, STANLEY JAMES, 33, Belmont Rd., Beckenham, Kent. British. Analytical Chemist in Laboratory of Manufacturing Chemists, namely, Messrs. Hopkins & Williams, 16-17, Cross St., E.C. Honours Student in Chem. at Birkbeck Coll., University of London. 5 Years analytical work with manufacturing chemists. (*Signed by*) George Senter, F. Barrow, Samuel Sugden.

GASKILL, MALCOLM SINCLAIR, 3, Buckingham Rd., Hilton Park, Prestwich, Manchester. British. Chemical Engineer, West's Gas Improvement Co., Ltd., Manchester. Associate of the Manchester College of Technology. Chemist and Assistant Manager, Messrs. Hardman & Holden, Ltd., Chemical Manufacturers, Clayton. Present position, as above. Desirous of keeping in touch with modern developments of pure and applied chemistry. (*Signed by*) Harold G. Colman, William Buckley, Joseph Poulson.

GIBBS, WILLIAM EDWARD, 4, Stanley Villas, Runcorn. British. Chief Chemist to the Salt Union, Ltd. D.Sc. (Liverpool). Author of books: "Clouds and Smokes: The Properties of Disperse Systems in Gases," "The Dust Hazard in Industry." *Journ. Inst. Metals*, XV (1916), 1, pp. 41-191; *J.S.C.I.*, XLI, pp. 189-196; *Faraday Soc.*, XI, 1915, pp. 295-297, etc. (*Signed by*) W. C. McC. Lewis, I. M. Heilbron, E. C. C. Baly.

HAMER, NORMAN, "Ash Mount," Holcombe, nr. Manchester. British. Research and Analytical Chemist in Calico Printing, Dyeing, and Bleaching Works. As a student I have gained the Associateship of the Manchester College of Technology (Assoc. M.C.T.), whilst my duties as chemist cover a fairly wide field of analytical work, together with the investigation of the many and varied problems which are continually arising in the works. (*Signed by*) Arthur M. Morley, John K. Wood, Frank Lee Pyman.

HARTSHORNE, ERNEST, 12, Muriel St., Broughton, Manchester. British.

Chemist in the Laboratory of Dr. A. K. Miller, F.C.S. Degree of Bachelor of Technical Science in General Chemical Technology, Victoria University, Manchester. (*Signed by*) Alex. K. Miller, Frank Lee Pyman, John K. Wood.

HARVEY, ARTHUR, 12, Chaldon Road, Fulham, S.W. 6. British. Chemist. Formerly Agricultural Analyst, South Eastern Agricultural College (Univ. Lond.), Wye, Kent. Formerly lecturer on Applied Chemistry, Leather-sellers College, London. Author of "Practical Leather Chemistry" and "Tanning Material," published by Crosby Lockwood & Son. Also several papers on leather chemistry in *J. Soc. L. Trades Chem.* Editor of Abstracts, *J. Soc. L. Trades Chem.* Member, British Association of Chemists, American Chemical Society, Society of Leather Trades Chemists. (*Signed by*) M. C. Lamb, A. B. Bradley, R. W. West.

HENNING, CHARLES RICHARD, 19, St. Dunstan's Hill, London, E.C. 3. German. Consulting Chemist. Qualified Pharmaceutical Chemist. Graduated in Chemistry. Ph.D., Freiburg. Papers as given before when first being admitted. (*Signed by*) Otto Oberländer, George P. Forrester, A. W. Edwards.

HINDLE, JAMES, 4, Plane St., Blackburn, Lancs. British. Student. Have been full-time day student in the Chemistry Dept. Municipal Technical College, Blackburn, for four years and am now preparing for Hons. Chemistry, B.Sc. (Lond.) there. (*Signed by*) G. W. F. Holroyd, Harry G. Leigh, J. T. Holden.

JONES, NOEL WATERMAN VERE, Eastnook, Pakefield, Lowestoft. British. Student. Have been studying Chemistry for five years and wish to keep abreast of modern advances. (*Signed by*) E. de Barry Barnett, James W. Cook, Marcus A. Matthews.

LINCH, FRANK WILLIAM, 89, Hazelbottom Rd., Cheetham, Manchester. British. Research Chemist, British Dyestuffs Corporation. M.Sc., Lond. 1st Hons. Chemistry at B.Sc. F.I.C. Asst. Chief Chemist, H.M. Factory, Queensferry, 1915-1917. Chief Chemist, H.M. Factory, Avonmouth, 1917-1919. 1919 to date, Research Chemist, British Dyestuffs Corp., Blackley, Manchester. Action of sodium hypobromite on carbamide derivs. Part I. 3-Amino-coumarin. Both papers in *Trans.* 1912. (*Signed by*) G. R. Clemo, Colin H. Lumsden, Anthony J. Hailwood.

LIPSHAW, CHARLES, 48, Lr. Broughton Rd., Salford. British. Chemist to Messrs. Halliday & Co., Ltd., Bankfield Mills, Stockport. 4 years Laboratory Chemist, and Assistant Works Chemist, at Lowerhouse Printworks, Burnley. Student at the Royal Technical College, Salford. Diploma of the College, City and Guilds of London Institute, Final Certificates in Dyeing and Textile Printing. (*Signed by*) S. N. Brown, V. Edge, E. Clark, B. Prentice.

MOORE, THOMAS, 8, Cyprus Avenue, Belfast. British. Student. Graduate of London (with Honours) and of the Queen's University, Belfast. Fifth year research student in Photochemistry. (*Signed by*) Wm. H. McVicker, Joseph K. Marsh, A. W. Stewart, H. Graham.

NIXON, IVOR GRAY, 75, The Vale, Golder's Green, N.W. 11. English. Student. Have studied chemistry for over 6 years and desire to keep abreast of modern developments. (*Signed by*) E. de Barry Barnett, P. C. L. Thorne, James W. Cook.

OCULESHAW, VINCENT JOSEPH, 22, Bryn Street, Ashton-in-Makerfield, nr. Wigan. British. Lecturer and Demonstrator in Inorganic Chemistry. M.Sc. (Liv.). A.I.C. (*Signed by*) E. C. C. Baly, J. T. Nance, A. O. Jones.

PADGHAM, ERNEST CHARLES, 30, Churchill Road, N.W. 2. British. Research Assistant at the British Museum Laboratory. Trained in Analytical

Chemistry under the late Dr. Ludwig Mond, F.R.S., and the late Dr. B. Mohr, 1891-1896. Assistant at the Davy Faraday Research Laboratory of the Royal Institution, 1896-1918. Research Assistant at The British Museum Laboratory since 1920. (*Signed by*) Alexander Scott, H. J. Plenderleith, John W. Heath.

PRESCOTT, JAMES ARTHUR, The University, Adelaide, South Australia. British (England). Professor of Agricultural Chemistry at the Waite Agricultural Research Institute of the University of Adelaide. Papers on Soil Chemistry in the "Journal of Agricultural Science," VI, 111; VIII, 65, 111, 136; IX, 216; X, 177; XIII, 333; also Bulletins of the Sultanic Agricultural Society, Egypt. Research Scholar, Rothamsted Experimental Station, 1912-1916. Chief Chemist, Sultanic Agric. Soc., Egypt, 1916-1924. Proceedings, vol. 30, No. 123, 1914. (*Signed by*) Edward H. Rennie, E. J. Russell, H. B. Dixon, Arthur Lapworth, Robert Robinson, H. J. Page.

ROBERTSON, JOHN MONTEATH, Nether Fordun, Auchterarder, Perthshire. Scottish. Research Assistant. B.Sc. (Hons. Chem.), Glasgow, 1923. A.I.C., 1924. Strang-Steel Research Scholar, 1923-24. Carnegie Research Scholar, 1924-25. (*Signed by*) S. Horwood Tucker, T. S. Patterson, G. G. Henderson, R. Wright, David T. Gibson.

RUBENSTEIN, LEON, Jesus College, Oxford (Rookwood, 87, Eaton Grove, Swansea). British. Research Student for Doctorate of Philosophy (Oxford University). First Class Honours, Degree of Bachelor of Science (Welsh Univ.). Bachelor of Science (Oxford Univ.). "Substitution in Vicinal Trisubstituted Benzene Derivatives" (November 1923). (*Signed by*) W. H. Perkin, S. G. P. Plant, J. F. S. Stone, R. H. Griffith, R. D. Haworth.

SINGH, MALIK KARAM, Rawalpindi City. Indian (British subject). Paper Expert. I am a B.Sc. (Physics and Chemistry). Was granted a "State Technical Scholarship" by the Govt. of India for the study of the Paper-making industry in Gt. Britain and other Western countries. Before going to England I worked for about twenty months in the Bengal Paper Mills, Raneegunj (near Calcutta), during 1918-20. Joined College of Technology, Manchester, in 1920. During 1920-21 I completed in one year, a two years' course in paper making, and in the final examination I got a 1st class both in the theoretical and practical parts of the subject. I also studied the following subjects: Organic Chemistry, Physical Chemistry, Chemistry of Dyeing, Chemistry of the Colouring Matters, Economics, Chemical Engineering, Heat Engines, and Construction of Works. In 1921-22 (about 15 months) I received practical training in the following three paper mills, in Aberdeen, Scotland, making different classes of paper: (1) The Donside Paper Mills; (2) The Alex Pirie Paper Mills at Stonewood, and (3) The Mugiemooss Paper Mills at Bucksburn. During 1922-24 I conducted a special research on about a score of Indian raw materials, with a view to ascertain their suitability for making paper. I have paid short visits lasting from one to ten days to about a score of other paper mills and paper mill machinery manufacture workshops. I have seen almost all the paper mills in India. (*Signed by*) John K. Wood, Frank Lee Pyman, F. M. Rowe.

SMITH, NORMAN HEATH, Hillcroft, Spencer Avenue, Leek, Staffs. British. Process Chemist, at present with Messrs. Anglo-Persian Oil Co., Ltd., Abadan, Persia. B.Sc. (Tech.). Post grad. research on vegetable oils; 2½ years with Messrs. The British Aluminium Co., Ltd., as Asst. Chemist, and over 2 years with Messrs. Anglo-Persian Oil Co., Ltd. (*Signed by*) Colin E. Spearing, S. W. Hayter, H. Harper.

**STREATHER, ALEC THOMAS**, 3, Wellington Road, Watford. British. Works Chemist. B.Sc. (Honours Chemistry), Birmingham, 1922. Associate Institute of Chemistry. (*Signed by*) G. T. Morgan, S. R. Carter, C. E. Wood, F. W. Pinkard.

**THURGOOD, JOHN**, "Roseleigh," Elmwood Ave., Harrow, Middx. British. Analytical and Research Chemist. Engaged for 4 years in laboratory of Dunlop Rubber Co., Birmingham. Graduated B.Sc. at Birmingham University in 1922. At present engaged as Assistant Chemist to British Oxygen Co., Ltd., N. Wembley. (*Signed by*) G. T. Morgan, C. E. Wood, E. Holmes.

**TREW, VIOLET CORONA GWYNNE**, 18, Adam Street, Portman Square, W. 1. British. Student at Bedford College (London University). Reading for an Honours Degree in Chemistry. (*Signed by*) J. F. Spencer, H. Crompton, P. V. McKie.

**UCHIDA, SHOJIRO**, 12, Shinryudo-Machi, Azabu-Ku, Tokio, Japan. Japanese. Research Chemist of the Fuel Research Board of Japan. Undergraduate of Department of Chemistry, College of Technology, University of Tokio, Japan. (*Signed by*) W. A. Batley, V. H. Legg, M. J. Burgess, F. V. Tideswell.

**WALKER, JOHN HENRY**, A.R.T.C., A.I.C., Gourepore Works, Naihati, E.B. Ry., Bengal, India. Scotch. Chemist and Oil-mill Manager. Student Royal Technical College, Glasgow. Student with late Dr. J. Lewkowitsch. Sundry papers in *Analyst* and in *J.S.C.I.* Chemist and latterly mill-manager, Gourepore Co., Ltd., Linseed Oil. (*Signed by*) G. G. Henderson, Thomas Gray, F. J. Wilson.

**WARREN, ERNEST HENRY**, 1, Chamber's Lane, Willesden Green, N.W. 10. English. Research Student. B.A., Cantab. (*Signed by*) Robert Robertson, Geo. Stubbs, P. J. Sageman.

**WATT, JAMES**, Craiglockhart House, Slateford, Edinburgh. British. Writer to the Signet. Chairman of Directors, T. and H. Smith, Ltd., Chemical Manufacturers. F.R.S.E. (*Signed by*) James Walker, Alex. C. Cumming, Alexander Lauder.

**WILLIS, WILLIAM JOHN**, Hazel Mount, Carnforth, Lancs. English. Chief Valuer to Michael Faraday and Partners, 77, Chancery Lane, W.C. 2. 3 years' Assistant Demonstrator, Inorganic Chemistry, Barrow Technical School. 3 years' Lecturer on Metallurgy and Iron Foundry Practice, Bradford Technical College. 1st Class Honours Inorganic Chemistry, Science and Art Department. 1st Class Honours and Bronze Medal, City and Guilds of London, Iron and Steel Manufacture. 1st Class and Silver Medal, City and Guilds of London, Salt Manufacture. 8 years Analytical Chemist, Barrow Hematite Steel Co., Ltd. 6 years Chief Chemist and Assistant Works Manager, Yorkshire Iron and Coal Co., Ltd. 5 years Chief Valuer to Michael Faraday and Partners, Surveyors and Valuers. (*Signed by*) T. A. Henry, A. E. Bond, Harry W. Dixon.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2).

**BEESLEY, WILLIAM**, Binnyston Gardens, Bangalore City, Mysore, India. British. Works' Chemist. Took course in Bleaching and Dyeing at the Manchester College of Technology. Technological Certificate and Silver Medallist in Dyeing, City and Guilds of London Institute. Six years Chemist Assistant with Messrs. Binny & Co., Ltd. Now Head Chemist, Bangalore Woollen Mills, India. (*Signed by*) E. Knecht.

**BECKER, HOWARD**, 1510 Dana Ave., Cincinnati, Ohio, U.S.A. American.

Research Director for The R. I. Johnston Paint Co., Cincinnati, Ohio. Graduate student from Ohio Mechanics Institute, Cin., Ohio. 1 year graduate work, Columbia College, N.Y. 6 years teaching at Ohio Mechanics Institute and for 3 years head of the department. Member of the American Chemical Society, Society of Chemical Industry, German Chemical Society. (*Signed by*) John H. Foulger.

SMITH, ALEXANDER, P.O. Box 103, Nairobi, Kenya Colony. Scot. Chemist and Managing Director, A. H. Wardle & Co., Ltd. Lecturer on chemistry for 2 years, School of Mines, South Africa. Pharmaceutical Society, minor certificate. Consulting Chemist to Kenya Marble Quarries. In charge Hygiene Laboratory (Dr. Kochs), Dar-es-Salaam, 12 months. (*Signed by*) G. T. R. Francis.

## ADDITIONS TO THE LIBRARY.

### I. *Donations.*

ASSOCIATION OF BRITISH CHEMICAL MANUFACTURERS. British chemicals, their manufacturers and uses : being the official directory . . . containing a full list of members, with a classified list of British chemicals and a note of their industrial applications. London 1925. pp. 212. (*Reference.*) 10s. 6d. net.

From the Publishers : Messrs. Ernest Benn.

INDIAN CHEMICAL SOCIETY. Quarterly Journal. Vol. I, etc. Calcutta 1924 +. (Two copies.) From the Society.

INSTITUT INTERNATIONAL DE CHIMIE SOLVAY. Premier conseil de chimie, tenu à Bruxelles du 21 au 27 Avril 1922. Rapports et discussions . . . sur cinq questions d'actualité. Paris 1925. pp. xvi + 336. ill. (*Reference.*) 30 fr. net.

From the Publishers : MM. Gauthier-Villars & Cie.

NAMARI, ICHITARO. The electrolytic separation of magnesium from magnesia. Sakai 1924.. pp. iv + 160. ill. (*Recd.* 15/4/25.)

From the Author.

# PROCEEDINGS

OF THE

## CHEMICAL SOCIETY.

Ordinary Scientific Meeting, Thursday, June 4th, 1925, at 8 p.m.,  
Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., D.Sc., F.R.S., President,  
in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of Mr. Charles E. Soane, who was elected a Fellow on February 3rd, 1887, and who died on May 17th.

The PRESIDENT announced that the following address of congratulation had been sealed and will be presented on June 16th, 1925, to the Royal Institution on the occasion of the celebration of the Centenary of the discovery of benzene by Michael Faraday :

*To the President, Officers and Members of the Royal Institution  
of Great Britain.*

The Chemical Society welcomes the opportunity of associating itself with the Royal Institution in celebrating the centenary of the Discovery of Benzene by Michael Faraday, a discovery which was destined to have such far-reaching effects on the foundation and development of structural organic chemistry and to lead to the establishment of many new and important industries. We remember with pride that in 1868 the Chemical Society instituted a Triennial Lecture to commemorate the work of Faraday, for we recognise in him the pioneer of many of the principles underlying the chemical science of to-day.

We desire to join with the other Learned Societies and Academies of the world in offering our homage to the memory of this great and distinguished man.

Signed on behalf of the Chemical Society,

ARTHUR W. CROSSLEY, *President.*

JOCELYN THORPE, *Treasurer.*

T. SLATER PRICE, } *Secretaries.*

C. S. GIBSON, }

F. G. DONNAN, *Foreign Secretary.*

Sealed in Council this Fourth Day of June, One Thousand Nine Hundred and Twenty Five.

Mr. W. A. Wightman was formally admitted a Fellow of the Chemical Society.

Certificates were read for the first time in favour of :

William Bouch O'Brien Goudielock, 28, Fairfield Lane, Barrow-in-Furness.

Jnanendra Nath Ray, M.Sc., The University, Manchester.

Phyllis Mary Sanderson, 7, Cresswell Place, S.W. 10.

Eric Alfred Speight, B.Sc., A.R.C.S., 61, Arthur Road, Wimbledon Park, S.W. 19.

Gordon Mitchell Wright, M.A., B.Sc., University Chemical Laboratory, Cambridge.

The following papers were read :

"The spatial structure of *cycloparaffins*. Part I. A new aspect of Mohr's theory and the isomerism of decahydronaphthalene." By W. A. WIGHTMAN.

"Chenopodium oil. Part II. The hydrocarbon fraction." By T. A. HENRY and H. PAGET.

"Echitamine." By J. A. GOODSON and T. A. HENRY.

Ordinary Scientific Meeting, Thursday, June 18th, 1925, at 8 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., D.Sc., F.R.S., President, in the Chair.

The PRESIDENT announced :

1. That, as Fellows would know, the Council has had before it for some time past the possibility of unifying chemical abstracts in pure and applied chemistry in the English language, and as stated in the Report of Council for 1923—1924, the Bureau of Chemical Abstracts was created to effect such unification. The Council, at its meeting that afternoon, had under consideration the following proposals of the Bureau, that

(1) The format adopted for the unified publications should be double column quarto.

(2) The type should be that now employed in the "A" Abstracts.

(3) The existing overlap, estimated to be at least 10%, should be eliminated,

as well as the further suggestion that, in the event of these proposals being adopted, one annual index covering both sections of the Abstracts should be supplied to all members of the two Societies concerned.

The Council has adopted the following resolution :

"That the Council concurs in the Bureau's proposals for the unification of the Abstracts in Pure and Applied Chemistry, and urges the Fellows, in the interests of co-operation and of

the consolidation of British Chemical Abstracts, to accept loyally such changes of format and arrangement as these proposals may involve."

It was further intimated that the proposals of the Bureau have also been accepted by the Council of the Society of Chemical Industry.

The President expressed the hope that Fellows would loyally support the efforts being made in the direction of unifying British chemical abstracts.

2. That the Faraday Society will hold a General Discussion on "Photochemical Reactions in Liquids and Gases" at Oxford on October 1st and 2nd next. The subject will be discussed under two main heads: (1) Einstein's Law of Photochemical Equivalence, (2) The Mechanism of Photochemical Reactions. Part I will be opened by Professor A. J. Allmand (King's College) and Part II by Professor M. Bodenstein (Berlin).

Fellows of the Chemical Society will be welcomed at this meeting, and it is hoped to accommodate all who attend the meeting at Exeter College and Lincoln College. Those desirous of attending are asked to communicate at once with the Secretary of the Faraday Society, 90, Great Russell Street, London, W.C. 1, from whom full particulars may be obtained.

3. That a communication has been received from the Committee of the van't Hoff Fund for the endowment of research in pure and applied chemistry. The amount from this fund available for distribution during 1926 is about 1400 Dutch florins.

A Committee, consisting of Professor A. F. Holleman (President), Professor F. M. Jaeger, Professor A. Smits, and Mr. J. P. Wibaut (Secretary), has been appointed to award Grants. Applications should be sent before November 1st, 1925, by registered post to: "Het Bestuur der Koninklyke Akademie van Wetenschappen, bestemd voor de Commissie van het 'van't Hofffonds,' Trippenhuis, Kloveniersburgwal, Amsterdam." Every applicant is requested to submit a detailed account of the manner in which he proposes to expend the grant and to state the reasons for which he makes his application.

Papers embodying the results of the research may be published in any journal, but acknowledgment must be made of the source of the grant. Copies of papers containing the results of the research must be forwarded to the Committee.

4. That Volume V of the Annual Tables of Constants and Numerical Data is now ready, and is obtainable from Monsieur Charles Marie (9, Rue de Bagneux, Paris VI) who will be glad to send particulars on application.

Messrs. J. B. Reed and P. W. B. Harrison were formally admitted Fellows of the Chemical Society.

Certificates were read for the first time in favour of :

Joseph Raymond Dolphin, B.Sc., Chemical Department, The University, Birmingham.

Henry Wilfrid Keenan, 80, Upper Richmond Road, East Sheen, S.W. 14.

Bertram Grey Leatherbarrow, Hill Crest, Station Road, Brimington, Chesterfield.

Henry Nicholson, M.Sc., Aberlady, Osborne Road, Stockton-on-Tees.

Robert Saxon, B.Sc., Westfield Terrace, Baildon, Yorks.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2) :

Bertram Cuthbert, c/o The British Australian Cotton Association, Ltd. Oil Mills, Brisbane.

Albert Louis Auguste Sigot, Institut de Chimie, 2, Rue Goethe, Strasbourg.

Mr. H. C. Sayer and Dr. H. Burgess were elected Scrutators, and a ballot for the election of Fellows was held, the following subsequently being declared elected as Fellows :

Marion Alice Battie, B.Sc., A.I.C.

Maung Hla Baw.

William Beesley.

William Ambler Berry, B.Sc.

Joseph John Blackie.

Samuel Cyril Blacktin, M.Sc.

Neville Melton Bligh, A.R.C.S., A.I.C.

Hugh Alexander Millar Borland, M.Sc., A.R.C.S.

Nirmal Boran Brohmachary, B.Sc.

Gertrude Margaret Bullick, B.Sc.

Ralph Edgar Cable.

Thomas Anthony Canning.

Leslie Marshall Clark, B.A., Ph.D., A.I.C.

Clive Kear Colwell, B.A.

Jan Coops.

William George Corderoy, B.Sc.

Oswald Pilkington Cronshaw.

John Carroll Culbert.

John Alexander Currie, B.A., B.Sc.

Alexander John Dey.

Thomas Dillon, M.A., D.Sc.

Octave Charles Marie Dony.

Howard Ecker.

Stanley James Featherston.

Malcolm Sinclair Gaskill.

William Edward Gibbs, D.Sc.

Norman Hamer, Assoc.M.C.T.

Ernest Hartshorne, B.Sc.Tech.

Arthur Harvey.

Charles Richard Hennings, Ph.D.

James Hindle.

Noel Waterman Vere Jones.

Frank William Linch, M.Sc., F.I.C.

Charles Lipshaw.

Thomas Moore, B.Sc.

Ivor Gray Nixon.

Vincent Joseph Occleshaw, M.Sc., A.I.C.

Ernest Charles Padgham.

James Arthur Prescott, M.Sc., A.I.C.

John Monteath Robertson, B.Sc., A.I.C.

Leon Rubenstein, B.Sc.

Malik Karam Singh, B.Sc.

Alexander Smith.

Norman Heath Smith, B.Sc.Tech.

Alec Thomas Streather, B.Sc., A.I.C.

John Thurgood, B.Sc.

Violet Corona Gwynne Trew.

Shojiro Uchida.

John Henry Walker, A.R.T.C., A.I.C.

Ernest Henry Warren, B.A.

James Watt.

William John Willis.

The following papers were read :

- "Investigations on the dependence of rotatory power on chemical constitution. Part XXVII. Some esters of *p*-toluene-sulphonic and sulphinic acids." By H. PHILLIPS.
- "The enhanced reactivity of newly formed molecules. Part I. The conversion of cyclols into ketones." By F. R. GOSS and C. K. INGOLD.
- "Constituents of *Myoporum laetum*, Forst ('The Ngaio'). Part I." By F. H. McDOWALL.
- "A synthesis of datisctetin." By J. KALFF and R. ROBINSON.
- "The relative directive powers of groups of the forms RO- and RR'N- in aromatic substitutions. Part IV. A discussion of the observations recorded in Parts I, II, and III." By J. ALLAN, A. E. OXFORD, R. ROBINSON, and J. C. SMITH.
- "A new aspect of the photochemical union of hydrogen and chlorine, and a quantitative study of the induction period." By R. G. W. NORRISH.

The Council has made the following Grants from the Research Fund :

	£	s.	d.
Bromination products of caronic acid. R. G. Atkinson. ...	12	0	0
Mechanism of tautomeric change. J. W. Baker ...	15	0	0
Photographic investigation of explosion waves. C. Campbell ...	5	0	0
Chemistry of the aminotriazole derivatives ( <i>contd.</i> ). P. K. Dutt. ...	5	0	0
Chemistry of the acridine molecule ( <i>contd.</i> ). P. K. Dutt ...	5	0	0
Ring-chain tautomerism. S. Dutt ...	10	0	0
Investigation and synthesis of ten-membered rings of the cryptopine type. G. A. Edwards ...	10	0	0
Contact electrification. F. Fairbrother ...	7	0	0
Oxidation of 5:6-benzo-1:1'-diethylcarbocyanine bromide. E. H. St. C. Flack ...	10	0	0
Oxidation of sesquiterpenes. D. T. Gibson ...	5	0	0
Action of thionyl chloride on hydroxybenzenes. A. Green ...	5	0	0
Structure of alkaloids and related compounds. J. M. Gulland... 10	10	0	0
Derivatives of methyl quinolines ( <i>contd.</i> ). D. L. Hammick ...	10	0	0
Some polarity effects in substituted stilbenes and tolanes. H. A. Harrison ...	10	0	0
Synthesis of alkaloids and allied compounds. R. D. Haworth ...	15	0	0
Investigation of the structure of Ciba Yellow ( <i>contd.</i> ). E. Hope ...	10	0	0
Experiments on the tetrahedral theory to S-N rings. R. F. Hunter ...	5	0	0
Action of aldehydes on aldehyde cyanohydrins in solution. B. H. Ingham ...	5	0	0
Reactivity of bivalent carbon. Mrs. E. H. Ingold ...	10	0	0
Correlation of additive reactions with tautomeric change ( <i>contd.</i> ). Mrs. E. H. Ingold ...	5	0	0
Mobility of the $\alpha\beta$ - $\beta\gamma$ change in unsaturated acids and unsaturated ketones. J. D. Johnson ...	15	0	0

	£	s.	d.
Influence of <i>gem</i> -dimethyl grouping on the formation and ring closure of substituted adipic acids. J. Kracovski ...	12	0	0
The constitution of strychnine and of brucine. F. Lions ...	20	0	0
Acid chlorides of the type chlorothiol benzoyl chloride and their products. E. W. McClelland ...	5	0	0
Influence of various substituents on the reactivity of organic compounds. I. Cyanohydrin formation. R. H. F. Manske...	10	0	0
Further investigation of the "Rotary Stillhead." J. E. Myers	10	0	0
Investigation of heterocyclic compounds related to tetrahydro-carbazole. S. G. P. Plant ...	15	0	0
Stereochemistry of arsenic. R. Raper ...	10	0	0
Rapid thermal decomposition of certain organic compounds under reduced pressure. J. Reilly ...	7	10	0
Ring-chain tautomerism of the $\beta\beta$ -disubstituted lævulic acids and their structures. E. Rothstein ...	20	0	0
(a) Substituted indole derivatives ...			
(b) Orientation in trisubstituted benzene derivatives ( <i>contd.</i> ). L. Rubenstein ...	5	0	0
Chemistry of the three-carbon system. L. F. Smith ...	12	0	0
Three-carbon tautomerism ( <i>contd.</i> ). E. A. Speight ...	15	0	0
The parachor and chemical constitution. S. Sugden ...	10	0	0
Influence of water vapour on reactions of the type: Solid $\rightleftharpoons$ solid + gas. B. Topley ...	5	0	0
Physical properties of straight-chain alkyl benzenes and their derivatives ( <i>contd.</i> ). E. E. Turner ...	5	0	0
Investigation of sulphur trioxide ( <i>contd.</i> ). I. Vogel ...	5	0	0
Synthetical experiments in the isoquinoline series. R. Campbell	10	0	0
Separation of platinum from iridium and rhodium with special reference to complex nitrites. D. F. Withers ...	10	0	0

### THE LIBRARY.

The Library will be closed for Stocktaking from Monday, August 3rd, until Saturday, August 15th, 1925 (inclusive). During the

following four weeks (August 17th to September 12th), the Library will close daily at 5 p.m.

### LIST OF FELLOWS, 1925.

The List of Fellows for 1925 is now in active preparation and will be supplied to those Fellows who make application to the Assistant Secretary by the 31st July, 1925. In order that the new List may be as complete as possible, Fellows are invited to notify any change of address, or other alteration, before that date.

### BERICHTE, 1915-1924.

Sets of the Berichte from 1915 to 1924 (10 years) are now offered to Fellows of the Society at £22, carriage extra. Application should be made to Mr. S. E. Carr.

List of papers, or Abstracts thereof, received between May 22nd and June 18th, 1925. (This List does not include the titles of papers which have been read at a Scientific Meeting or which have appeared in the Journal.)

"A low voltage standard cell." By H. MASTIN.

"Hydrogen and oxygen electrode titrations of some dibasic acids and of dextrose." By H. T. S. BRITTON.

"Sulphur sesquioxide." By I. VOGEL and J. R. PARTINGTON.

"The relation of homogeneous to catalysed reactions. The catalytic decomposition of hydrogen iodide on the surface of gold." By C. N. HINSHELWOOD and C. R. PRICHARD.

"The decomposition of carbon monoxide in the corona due to alternating electric fields. Part I." By M. CRESPI and R. W. LUNT.

"The formation and stability of spiro-compounds. Part XII. Further evidence for the multiplanar configuration of the cycloheptane ring." By J. W. BAKER.

"The condensed ternary system phenol-water-salicylic acid." By C. R. BAILEY.

"The hydration of strong electrolytes and some properties of salt solutions." By J. N. SUGDEN.

"The action of sulphur on amines. Part III. *o*-, *m*-, and *p*-Chloro-anilines." By H. H. HODGSON and J. H. WILSON.

"The system sodium sulphite-sodium hydroxide-water." By D. L. HAMMICK and J. A. CURRIE.

- "Synthetical experiments in the isoquinoline group. Part V. Synthesis of substances allied to oxyberberine." By R. D. HAWORTH, W. H. PERKIN, and H. S. PINK.
- "Amino benzothiazoles. Part II. The naphthylamino naphthiazoles and their bromo derivatives." By R. F. HUNTER.
- "Negative adsorption: the surface tensions and activities of some aqueous salt solutions." By A. K. GOARD.
- "The structure of  $\alpha$ -campholytic acid. A correction." By J. P. C. CHANDRASENA, C. K. INGOLD, and J. F. THORPE.
- "The interaction of carbon dioxide and hydrogen on the surface of tungsten." By C. N. HINSHELWOOD and C. R. PRICHARD.
- "Note on potassium antimonoxalate." By L. H. A. HOLMES and E. E. TURNER.
- "Studies on the Walden inversion. Part IX. The influence of the solvent on the sign of the product in the conversion of  $\beta$ -bromo- $\beta$ -phenylpropionic acids to  $\beta$ -hydroxy- $\beta$ -phenylpropionamides." By G. SENTER and A. M. WARD.
- "'Co-ordination' and the periodic table." By I. AUCKEN.
- "Anode phenomena in the electrolysis of potassium ethyl malonate." By J. B. ROBERTSON.
- "The isomerism of the styryl alkyl ketones. Part II. The isomerism of the homologues of 2-hydroxystyryl, and of 3-methoxy-, and 4-hydroxy-styryl methyl ketones." By A. MCGOOKIN and D. J. SINCLAIR.
- "Hydrogen electrode studies of the precipitation of hydroxides. Part I. Magnesium, manganous, ferrous, cobalt, nickel, and thorium." By H. T. S. BRITTON.
- "Stereoisomeric azo-dyes." By G. T. MORGAN and D. G. SKINNER.
- "4- and 4'-Methoxybenzoylbenzoin." By H. GREENE.
- "The relative rates of conversion of phenoxyphenyldichloroarsine and its chloro-derivatives into chlorophenoxarsines." By E. ROBERTS and E. E. TURNER.
- "Chemistry of petroleum. Part II. The action of sodium hypochlorite on types of sulphur compounds found in petroleum distillates." By S. F. BIRCH and W. S. G. P. NORRIS.
- "Derivatives of  $\delta$ -o-aminobenzoylvaleric acid." By M. J. PATERSON and S. G. P. PLANT.
- "The action of formic acid on certain sesquiterpenes." By J. M. ROBERTSON, C. A. KERR, and G. G. HENDERSON.
- "Syntheses of disulphoxides." By D. T. GIBSON, C. J. MILLER, and S. SMILES.
- "The effect of gum arabic and other emulsifiers on the acid hydrolysis of esters in heterogeneous systems." By R. C. SMITH.
- "Lithium arc spectrum for polarimetric use." By P. C. AUSTIN.

- "Bismuth dihydride." By E. J. WEEKS and J. G. F. DRUCE.  
 "Reduction product of the hydroxyanthraquinones. Part VI." By A. G. PERKIN and G. YODA.  
 "A wandering of the acetyl group during methylation." By O. KUBOTA and A. G. PERKIN.  
 "The supposed formation of 1 : 2 : 4-oxadi-imine rings from nitroso-compounds and methylenearylamines." By G. N. BURKHARDT, A. LAPWORTH, and E. B. ROBINSON.  
 "The reaction of bromine with aliphatic acids. Catalytic effect of acyl halides." By H. B. WATSON.

## ADDITIONS TO THE LIBRARY.

### I. *Donations.*

CLARKE, FRANK WIGGLESWORTH. The data of geochemistry. 5th edition. Washington 1924. pp. 842. (*Recd.* 26/5/25.)

# PROCEEDINGS

## OF THE

### CHEMICAL SOCIETY.

Ordinary Scientific Meeting, Thursday, October 15th, 1925,  
at 8 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., D.Sc., F.R.S.,  
President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society,  
through death, of the following Fellows :

	<i>Elected.</i>	<i>Died.</i>
Richard Burtles.....	May 3rd, 1923.	July 3rd.
Charles Frederick Chandler .....	Feb. 1st, 1872.	Aug. 25th.
William Henry Deering .....	April 1st, 1869.	Sept. 5th.
William Joseph Dibdin .....	April 15th, 1880.	June 8th.
Samuel Jackson.....	Dec. 15th, 1892.	July 27th.
Francis Robert Japp .....	Feb. 6th, 1879.	Aug. 1st.
Reginald A. Joyner .....	Dec. 6th, 1917.	Oct. 8th.
Daniel Rankin Steuart .....	Dec. 15th, 1881.	Aug. 1st.
Leonard E. Vlies .....	Feb. 21st, 1918.	July 26th.

The PRESIDENT announced that :

1. The first of the two Informal Lectures to be held this Session  
will be delivered in the Rooms of the Society on Thursday,  
November 26th, 1925, by Professor R. Robinson, D.Sc., F.R.S.,  
who has chosen as his subject :

“Recent Researches on the Structural Relationships of  
Some Plant Products.”

Special attention is drawn to the fact that the lecture will be  
delivered at 6 o'clock instead of at 8 o'clock as stated on the meeting  
card.

2. Following the innovation made in October, 1923, it has  
been decided to hold next month a united dinner for British Chemists.  
The dinner, to be called “British Chemistry Dinner” is under the  
auspices of the Chemical Society, the Institute of Chemistry, the  
Society of Chemical Industry, the Association of British Chemical  
Manufacturers, the Institution of Petroleum Technologists, the  
Society of Public Analysts, the Bio-Chemical Society, the Oil and  
Colour Chemists' Association, and the Chemical Industry Club,

and will be held at the Connaught Rooms, Great Queen Street, W.C. 2, on Friday, November 13th, 1925, at 6.30 for 7 p.m. Dr. W. R. Ormandy, Chairman of the Chemical Industry Club, will preside.

The price of the tickets is 15s. each (not including wine) for lady or gentleman, and as the accommodation is limited to about 400, early application is advisable.

Besides the Loyal Toasts, there will be only two other Toasts, namely, "The Profession and Industry of Chemistry" and "The Guests." After dinner, there will be dancing and musical items.

Application for tickets (15s. each), with remittance, should be sent to the Secretary of the Chemical Industry Club, 2, Whitehall Court, S.W. 1.

3. The Selection Committee of the Harrison Memorial Prize will meet shortly to consider the award of the Harrison Prize.

The Prize, of the value of about £150, is to be awarded to the chemist of either sex being a natural born British subject and not at the time over thirty years of age, who, in the opinion of the Selection Committee, during the previous five years has conducted the most meritorious and promising original investigations in any branch of pure or applied chemistry and published the results of those investigations in a scientific periodical or periodicals.

Provided that in the opinion of the Selection Committee there is a candidate of sufficient distinction to warrant an award of the Prize, the award is to be made in December, 1925.

The Selection Committee is prepared to receive applications, nominations or information as to candidates eligible for the Prize. Any such information must be received by The President, The Chemical Society, Burlington House, Piccadilly, W. 1, not later than Tuesday, December 1st, 1925.

4. As Fellows are already aware, the Council has approved the proposals of the Bureau of Chemical Abstracts (see Procs. for June, 1925), aiming at the unification of abstracts of chemical papers in this Country. As a consequence of the arrangements made, "British Chemical Abstracts" will appear as from January, 1926, in two sections, namely, A (Pure Chemistry) and B (Applied Chemistry), and will be in the same format and type, without overlap, and with one common index at the end of the year. The format adopted is that at present employed for the "B" Abstracts; beginning, therefore, with January, 1926, Fellows will receive the Abstracts in Pure Chemistry in quarto double-column size. This clearly means a break with the past, so far as the Chemical Society is concerned, but the Council trusts that in the interests of co-operation the Fellows will accept these changes with loyalty.

5. The price of the Annual Reports for 1925, Vol. XXII, will be the same as for Vol. XXI, namely 5s. 6d. post free to those Fellows who apply by Christmas Day, 1925. Application should be made to the Assistant Secretary, and must be accompanied by a remittance for 5s. 6d.

6. Volume I of the Memorial Lectures has been reproduced by a photographic process, and is now on sale at the Publishers, Messrs. Gurney & Jackson, 33, Paternoster Row, E.C. 4, price to Fellows 9s. post free.

7. Sets of the *Berichte* from 1915-1924 (10 years) can be obtained on application to the Assistant Secretary at the reduced price of £22, plus carriage.

8. In continuance of the arrangement made with the American Chemical Society, the *Journal of the American Chemical Society*, *Industrial and Engineering Chemistry*, and *Chemical Abstracts*, can be obtained by Fellows at the following reduced rates :

Price for any one journal \$7.25, post free,

Price for any three journals \$17.50, post free,

while *Chemical Reviews* is offered to Fellows at \$4.50, post free. Applications should be made as soon as possible to Dr. Charles L. Parsons, Secretary, American Chemical Society, 1709, G. Street N.W., Washington, D.C., U.S.A.

The *Journal of Physical Chemistry* is obtainable by Fellows at \$8.00 post free, published at \$10.00. Application should be made to the *Journal of Physical Chemistry*, Ithaca, N.Y., U.S.A.

9. A meeting of the Research Fund Committee will be held in December next. Applications for Grants, to be made on forms obtainable from the Assistant Secretary, must be received on or before Tuesday, December 1st, 1925. Applications from Fellows will receive prior consideration.

All persons who received Grants in December, 1924, or in December of any previous year, whose accounts have not been closed by the Council, are reminded that Reports must be returned by December 1st.

The following were formally admitted Fellows of the Chemical Society : G. M. Bullick, C. G. Trew, I. C. P. Smith, W. G. Corderoy, E. H. Warren, I. A. Smith, C. F. Flint, R. R. Garrahan, N. M. Bligh, and E. C. Padgham.

Certificates were read for the first time in favour of :

Robert Leslie Andrew, Dominion Laboratory, Wellington, New Zealand.

Louis Baissac, Curepipe Road, Mauritius.

William Francois Barker, Ph.D., Rhodes University College, Grahamstown, S. Africa.

Ralph Basden, The Technical College, Newcastle, N.S.W.

Frank Bell, 11, Edwy Parade, Gloucester.

Arthur Neville Copnall Bennett, B.Sc., 27, Dale Road, Luton.

John Cecil Bird, B.Sc., A.I.C., 72, Dyne Road, Kilburn, N.W. 6.

Lionel Christopher William Birkett, B.Sc., Moor House, North Road, Spenny-moor.

James Boyd, F.I.C., P.O. Box 1162, Johannesburg.

Frank Symonds Bradhurst, c/o Messrs. Holbrooks, Ltd., Danks Street, Waterloo, Sydney.

John Hildred George Carlile, B.Sc., A.R.C.S., 29, Orlando Road, Clapham, S.W. 4.

Leslie James Chalk, B.Sc., 14, Shrubbery Road, Southall.

Rama Charan, B.Sc., B.Sc.Tech., 12, Bank Road, Allahabad.

Edward Mortimer Crowther, D.Sc., F.I.C., Rothamsted Experimental Station, Harpenden, Herts.

Frank Edwin Dickinson, Research Establishment, Sutton Oak, St. Helens.

William Donovan, M.Sc., Dominion Laboratory, Wellington, New Zealand.

John Stanley Dunn, M.A., Ph.D., A.I.C., 39, Victoria Park, Cambridge.

Edwin Francis Edwards, c/o Messrs. Holbrooks, Ltd., Waterloo, Sydney.

John Moelwyn Edwards, 92, Jamaica Road, Rotherhithe, S.E. 16.

James Walter Shanks Gemmell, B.Sc., Helen's Villa, Fleming Place, St. Andrews.

Francis Reginald Glover, 98/100, St. Peters Street, Nottingham.

Felix John Theodore Grigg, M.Sc., A.I.C., Government Buildings, Christchurch, New Zealand.

John Hall, M.Sc., A.I.C., 202, Burton Road, Derby.

Herbert Sim Hirst, B.Sc., Trinity College, Cambridge.

Toru Iwadare, c/o Banyu Pharmaceutical Co., Ltd., 174, Shimomeguro, Tokyo, Japan.

David Christopher Mendis Jayewardene, Fern Bank, Moratuwa, Ceylon.

Charles Benjamin Johnson, 134, Preston New Road, Blackburn.

Walter Idris Jones, Ph.D., B.Sc., 7, Manor Street, Cambridge.

Charles King, 141, Bath Street, Glasgow.

Frederick Karl Victor Koch, B.Sc., A.R.C.S., 9, Crossfield Road, Hampstead, N.W. 3.

Charles Dudley Langford, B.Sc., A.R.C.S., 43, Ashbourne Avenue, Temple Fortune, N.W. 11.

Henry Guinness de Laszlo, B.A., Ph.D., 3, Fitzjohn's Avenue, Hampstead, N.W. 3.

Sam Lenher, B.A., 15, Gordon Street, W.C. 1.

William Macartney, c/o Messrs. Grattan & Co., Ltd., Belfast.

William Francis Martin, F.I.C., 27, Shandon Crescent, Edinburgh.

Arthur Moore, Highfield, Oakworth, Keighley.

John Blackburn Murgatroyd, 90, St. George's Square, S.W. 1.

Chitsukhlal Hiralal Nanavati, 80, Esplanade Road, Fort, Bombay.

Anna Maria O'Mara, 83, Elsham Road, Holland Park, W. 14.

Norman Frederick Parker, B.A., A.I.C., 45, Sellons Avenue, Harlesden, N.W. 10.

Marjorie Ellen Pring, B.Sc., 66, St. Augustine's Avenue, S. Croydon.

Herbert Charles Roberts, 15, Estcourt Terrace, Headingley, Leeds.

George Baty Scott, 37, Woodbridge Road, Knowle, Bristol.

Rupert Boswood Scammell, B.Sc., c/o Messrs. F. H. Faulding & Co., Ltd., Castlereagh Street, Redfern, Sydney.

Ugo Shin, Agricultural Farm, Mandalay.

Dalip Singh, Ph.D., near Tehsil P.O., Lahore.  
 William Veale Thorpe, B.A., 270, Balham High Road, S.W. 12.  
 William Milburn Towler, B.Sc., 28, Denton Avenue, Roundhay, Leeds.  
 David Traill, B.Sc., 58, Chalmers Street, Dunfermline.  
 Donald Morrison Turner, 40-42, Lexington Street, W. 1.  
 Geoffrey Turner, B.Sc., 85, Winchester Avenue, Leicester.  
 Frederick Henry Webb, St. Malo, Jameson Road, Harpenden, Herts.  
 Hugh Amphlett Williams, 249, Kennington Road, S.E. 11.  
 Robert Harding Williams, 131, Anlaby Road, Hull.  
 John James Benjamin Wolfe, 24, Greyhound Road, Hammersmith, W. 6.  
 John Frederick Zimmermann, 17, Stile Hall Gardens, Chiswick, W. 4.

The following papers were read :

- "The effect of ultra-violet light on dried hydrogen and oxygen." By H. B. BAKER and M. CARLTON.
- "A new per-oxide of barium." By M. CARLTON.
- "The production of oxide-films on copper at ordinary temperatures." By U. R. EVANS.
- "The structural isomerism of the oximes. Part III. The benzilmonoximes." By A. H. ATTACK and F. W. ATTACK.

List of papers, or abstracts thereof, received between June 18th and October 15th, 1925. (This list does not include the titles of papers which have been read at an Ordinary Scientific Meeting, or which have appeared in the Journal.)

- "The action of sulphuretted hydrogen on a neutral solution of potassium permanganate." By H. B. DUNNICLIFF and S. DAYAL.
- "Note on the preparation of thiocarbonyl." By S. J. C. SNEDKER.
- "Studies with the microbalance. Part II. The photochemical decomposition of silver chloride." By E. J. HARTUNG.
- "Preparation, hydrolysis and reduction of the isomeric fluorobenzyl bromides." By J. B. SHOESMITH and R. H. SLATER.
- "The action of silica on electrolytes. Part II." By A. F. JOSEPH and H. B. OAKLEY.
- "The formation and growth of silver nuclei in the decomposition of silver oxalate." By J. Y. MACDONALD and C. N. HINSHELWOOD.
- "Researches in the menthone series. Part I." By J. READ and A. M. R. COOK.
- "Studies in adsorption by the application of optical methods. Fixation by dispersoids of methylene-blue within the disperse phase." By A. FODOR and R. RIWLIN.
- "The physical chemistry of the metal-ammonium complexes. Part I. The blue of the copper-ammonium complexes." By S. S. BHATNAGAR, M. PRASAD and D. NATH.
- "The correlation of absorption spectra with ionisation in violuric acid." By R. A. MORTON and A. H. TIPPING.
- "Absorption spectra and lactam-lactim tautomerism." By R. A. MORTON and E. ROGERS.
- "The heat of combustion of salicylic acid." By E. BERNER.

- "An electrometric and phase rule study of some basic salts of copper." By H. T. S. BRITTON.
- "The distribution of pyridine between water and benzene." By R. M. WOODMAN and A. S. CORBET.
- "The velocity of decomposition of oxalic acid in solution." By D. L. WATSON.
- "The absorption of gases in colloidal solutions." By A. GATTERER.
- "A circulation apparatus for gases." By N. G. CHATTERJI and G. I. FINCH.
- "2:4-Dinitrophenylhydrazine as a reagent for aldehydes and ketones." By O. L. BRADY and G. V. ELSMIE.
- "The methylation of the oximes of benzil." By O. L. BRADY and H. M. PERRY.
- "The alkaline oxidation of some carbohydrates by means of dyestuffs, considered quantitatively." By E. KNECHT and E. HIBBERT.
- "Unstable states of solutions of sodium behenate." By M. E. LAING and collaborators.
- "Note on the preparation of *p*-nitrophenylhydrazine." By H. H. HODGSON and H. G. BEARD.
- "The preparation of 2-nitro-1-halogen naphthalenes and of  $\beta$ -nitronaphthalene." By H. H. HODGSON and E. KILNER.
- "The swelling and dispersion of some colloidal substances in ether-alcohol mixtures." By E. W. J. MARDLES.
- "The relationship of salts in dilute aqueous solution as determined by their influence on the critical solution temperature of the system phenol-water." By J. H. CARRINGTON, L. R. HICKSON, and W. H. PATTERSON.
- "The colorimetric dissociation constants of dinitrocatechol and dinitroresorcinol." By F. C. LAXTON, E. B. R. PRIDEAUX, and W. H. RADFORD.
- "The cyanine dyes. Part IX. The mechanism of the condensations of quinaldine alkylidides in presence of bases." By W. H. MILLS and R. RAPER.
- "Dibenzylquinaldine." By W. H. MILLS and A. T. AKERS.
- "The action of nitrous acid upon amides and other 'amino' compounds." By R. H. A. PLIMMER.
- "Olefinic terpene ketones from the volatile oil of flowering *Togetes glandulifera*. Part I." By T. G. H. JONES and F. B. SMITH.
- "On the interaction between copper and sulphuric acid." By C. W. ROGERS.
- "Trypanocidal action and chemical constitution. Part II. Arylamides of 4-aminophenyl-arsinic acid." By H. KING and W. O. MURCH.
- "The butyl esters of the simpler amino-acids. Part I." By W. T. J. MORGAN.
- "The influence of salts in ethyl alcohol solution on the mutual miscibility temperature of the system ethyl alcohol-paraffin." By E. J. HOWARD and W. H. PATTERSON.
- "Condensations of the sodium derivatives of trimethylene glycol and glycerol." By A. FAIRBOURNE and G. E. FOSTER.
- "An investigation of the effect of differential aëration on corrosion by means of electrode potential measurements." By A. L. McAULAY and F. P. BOWDEN.
- "The recognition of allotropy in metals." By D. STOCKDALE.
- "Solubility influences. Part I. The effect of some salts, sugars, and temperature on the solubility of ethyl acetate in water." By S. GLASSTONE and A. POUND.
- "Experiments on the synthesis of apofenchocamphoric acid. Preparation of  $\alpha$ -dimethyl- $\beta'$ -carboxyadipic acid." By K. C. ROBERTS.

- "Electrometric study of the reactions between alkalis and silver nitrate solutions." By H. T. S. BRITTON.
- "Electrometric separation of the iodide, bromide and chloride of silver." By H. T. S. BRITTON.
- "Reduction products of the hydroxyanthraquinones. Part VII." By W. B. MILLER and A. G. PERKIN.
- "Chloro-derivatives of *m*-hydroxybenzaldehyde." By H. H. HODGSON and H. G. BEARD.
- "The nitration of *m*-bromophenol." By H. H. HODGSON and F. H. MOORE.
- "The reduction of arsenic compounds by sodium hyposulphite. The production of subsulphides of arsenic." By W. FARMER and J. B. FIRTH.
- "The electrical conductivities of hydrochloric acid and potassium chloride in water and acetone-water mixtures." By T. K. BROWNSON and F. M. CRAY.
- "Metalloccyclic compounds. Part I. Compounds of tellurium." By H. D. K. DREW.
- "The action of hydrogen fluoride on compounds of selenium and tellurium. Part I. Selenium dioxide." By E. B. R. PRIDEAUX and J. O'N. MILLOTT.
- "The resolution of an asymmetric arsenic compound into its optically active forms." By W. H. MILLS and R. RAPER.
- "The electrical conductivity of phosphorus pentachloride." By G. W. F. HOLROYD, H. CHADWICK, and J. MITCHELL.
- "Hydrogen electrode studies of the precipitation of basic chromates, borates and carbonates." By H. T. S. BRITTON.
- "The relation between chemical constitution and pungency in acid amides." By E. C. S. JONES and F. L. PYMAN.
- "The rate of reaction of bromine with aqueous formic acid." By D. L. HAMMICK, W. K. HUTCHISON and F. R. SNELL.
- "The quaternary salts of benzoxazoles." By L. M. CLARK.
- " $\gamma\gamma'$ -Dichloropropyl sulphide." By G. M. BENNETT and A. L. HOCK.
- "Synthesis in the thianthren series. Part II." By M. SEN and J. N. RAY.
- "Some lactonic esters derived from phenacyl bromide by condensation with ethyl sodiomalonate and analogous substances." By R. M. RAY and J. N. RAY.
- "The velocity of decomposition of heterocyclic diazonium salts. Part I. Diazonium salts of the pyrazole and pyrazolone series." By J. REILLY and D. MADDEN.
- "Orientating effects in the diphenyl series." By H. G. DENNETT and E. E. TURNER.
- "The relative directive influence of polar and steric effects on ring closure." By R. W. J. SMITH and E. E. TURNER.
- "The configuration of the ammonium ion." By W. H. MILLS and E. H. WARREN.
- "Symmetrical substitution derivatives of trimethylene bromide and penta-methylene bromide." By W. H. MILLS and L. BAINS.
- "Further studies on a new chlorinating agent preparation of polychloro-derivatives of toluene." By O. SILBERRAD.
- "The equilibrium in the systems aluminium sulphate-copper sulphate-water and aluminium sulphate-ferrous sulphate-water at 25°." By V. J. OCCLESIAHAW.
- "Reactions of the meso-hydroxyanthrones." By M. A. MATTHEWS.

- "The influence of different nuclei on the absorption spectra of substances." By J. E. PURVIS.
- "The occurrence of sylvestrene." By B. S. RAO and J. L. SIMONSEN.
- "The partial formaldehyde vapour pressures of aqueous solutions of formaldehyde. Part II." By W. LEDBURY and E. W. BLAIR.
- "Trypanocidal action and chemical constitution. Part III. Arsinic acids containing the glyoxaline nucleus." By I. E. BALABAN and H. KING.
- "The preparation of tertiary arsines by the Friedel-Crafts reaction." By A. F. HUNT and E. E. TURNER.
- "Equilibrium in the system:  $\text{CH}_3\text{COOCH}_3 + \text{H}_2\text{O} \rightleftharpoons \text{CH}_3\text{OH} + \text{CH}_3\text{COOH}$ ." By G. J. BURROWS.
- "The parachor and chemical constitution. Part III. Orientation isomerism in aromatic compounds." By S. SUGDEN and H. WILKINS.
- "The aluminioxalates of some optically active bases." By T. B. CHILD, E. ROBERTS, and E. E. TURNER.
- "On the equilibrium between methylformate, methanol and hydrogen, and some related equilibria." By J. A. CHRISTIANSEN.
- "Hydrogen electrode studies of the reactions between solutions of salts of weak metallic bases and the acetate, oxalate and tartrate of sodium, with a note on the effect of dextrose on zirconium chloride solution." By H. T. S. BRITTON.
- "The conversion of *r*-phenyl- $\alpha$ -naphthyl-glycollic acid into ketones." By A. MCKENZIE and H. J. TATTERSALL.
- "Studies of equilibrium in systems of the type  $\text{Al}_2(\text{SO}_4)_3\text{-M''SO}_4\text{-H}_2\text{O}$ . Part II. Aluminium sulphate-nickel sulphate-water at 30°." By R. M. CAVEN and T. C. MITCHELL.
- "The system silver sulphate-aluminium sulphate-water at 30°." By R. M. CAVEN and T. C. MITCHELL.
- "Change of crystal habit of some salts when crystallised from silicic acid gel." By H. A. FELS and J. B. FIRTH.
- "The ionic activity product of water in glycerol-water mixtures." By J. COLVIN.
- "2-*m*-Xylidino-5-ethoxy-4:5-dihydrothiazole." By V. K. NIMKAR and F. L. PYMAN.
- "The change in the absorption spectra of aromatic nitro-compounds in liquid ammonia with time." By W. E. GARNER and H. F. GILLBE.
- "Nitrosyl sulphuric acid. Part I." By G. A. ELLIOTT, L. L. KLEIST, and H. W. WEBB.
- "The action of acetylenetetra-bromide on organic bases." By J. D. FULTON.
- "Production of *cyclotelluripentanedionedichlorides*." By G. T. MORGAN (with F. J. CORBY, O. C. ELVINS, E. JONES, R. E. KELLETT, and C. J. A. TAYLOR).
- "Interactions of tellurium tetrachloride and monoketones." By G. T. MORGAN and O. C. ELVINS.
- "A note on the sulphonation of 4-chloro-phenol." By J. M. GAUNTLETT and S. SMILES.
- "Some analogues of adrenalone. Part I." By F. MATTHEWS.
- "The relationship between the optical rotatory powers and the relative configurations of optically active compounds. Part II. The relative configurations of the optically active mandelic acids and  $\beta$ -phenyl-lactic acids." By G. W. CLOUGH.
- "Synthesis of 2:3:5-trimethyl glucose." By J. C. IRVINE and J. W. H. OGDEN.

- "The oxidation of certain sesquiterpenes with chromyl chloride and chromic acid." By D. T. GIBSON, J. M. ROBERTSON, and J. SWORD.
- "Tesla-luminescence spectra. Part VI. Some amino-derivatives." By W. H. McVICKER, J. K. MARSH, and A. W. STEWART.
- "Glyceryl glucoside." By H. S. GILCHRIST and C. B. PURVES.
- "A comparison of methods of measuring the polarity of surfaces." By N. K. ADAM, R. S. MORRELL, and R. G. W. NORRISH.
- "cycloHexanespirocyclohexane." By W. S. G. P. NORRIS.
- "The effect of heat on chloral hydrate." By J. D. MOUNFIELD and J. K. WOOD.
- "The solubilities of sodium, potassium and calcium ferrocyanides. Part I." By M. P. APPLEBEY and M. FARROW.
- "Isomeric change of aromatic compounds. Part I. The conversion of diacylanilides into acylaminoketones." By A. W. CHAPMAN.
- "Nitrosyl sulphuric acid." By F. J. WILSON and H. W. WEBB.
- "The constitution of the metallic ozonides." By E. C. C. BALY and R. W. RIDING.
- "The influence of substituents on the stability of Schiff's bases. Part I. Hydrolysis of nitro- and methoxy-benzylidene anilines." By E. M. LANGMAN, W. HEALEY, and P. K. DUTT.

## ADDITIONS TO THE LIBRARY.

### I. *Donations.*

ABDERHALDEN, EMIL. [Editor.] Handbuch der biologischen Arbeitsmethoden. Abt. I, Chemische Methoden, Teil 6, Heft. iii, Abt. III, Physikalisch-chemische Methoden, Teil A, Heft v. Berlin 1925. pp. [268] + xxiv, [136]. ill. *M.* 12.30, *M.* 5.70. (*Recd.* 12/9/25.) From the Publishers: Herren Urban & Schwarzenberg.

# PROCEEDINGS

## OF THE

# CHEMICAL SOCIETY.

Ordinary Scientific Meeting, Thursday, November 5th, 1925, at 8 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of the following Fellows :

	Elected.	Died.
John Young Buchanan .....	June 21st, 1877.	Oct. 16th.
Harold James Cross .....	Feb. 15th, 1917.	Oct. 17th.
Francis Jones.....	Dec. 4th, 1873.	Oct. 22nd.
Charles Eddy Potter .....	Dec. 5th, 1912.	Sept. 13th.

The PRESIDENT announced that Professors C. S. Gibson, G. T. Morgan, J. F. Thorpe, and W. P. Wynne, have been appointed by the Council to represent the Society on the Bureau of Chemical Abstracts, and that Professors T. M. Lowry, J. W. McBain, and J. C. Phillip will represent the Society on the Editorial Board of the Journal of Physical Chemistry, together with Professor F. G. Donnan, appointed by the Faraday Society.

Certificates were read for the first time in favour of :

Harold Frederic Betts, B.Sc., 17, The Broadway, Broadstairs.  
Edward Britnell, B.Sc., 9, Osterley Avenue, Isleworth.  
Reginald John Bromfield, 141, Constantine Road, N.W. 3.  
Francis Hereward Burstall, B.Sc., 12, Adelaide Road, Teddington.  
Archer John William Butterfield, 163, Northumberland Park, N. 17.  
John William Corran, B.Sc., Ph.D., A.I.C., Research Laboratory, Carrow Works, Norwich.  
John Harold Cottier, 52, Aspen Grove, Lodge Lane, Liverpool.  
John Horsfall Dyde, 18, Dean Road, Scarborough.  
George Malcolm Dyson, B.A., B.Sc., Ph.D., 36, Hillsborough Road, E. Dulwich, S.E. 22.  
Alfred Eccles, B.Sc., 18, Cambrian Terrace, Holbeck, Leeds.  
George Albert Elliott, M.Sc., 263, Kennington Road, S.E. 11.  
Eric Bertram Evans, B.Sc., 2, Boxmoor Terrace, Southchurch, Southend.  
Elinor Katharine Ewbank, B.A., 22, Park Crescent, Oxford.

- Elizabeth Monica Openshaw Farrow, M.A., 37, Chalfont Road, Oxford.  
 Oliver Free, B.A., The Lodge, Mansfield College, Oxford.  
 William Marshall Freeman, 1, Temple Gardens, Temple, E.C. 4.  
 Eva Florence Gee, The Station, L.N.E.R., Howsham, Lincoln.  
 George Vincent Hall, B.Sc., 6, Borough Road, Bridlington.  
 William Rowan Hare, 220, Eastfield, Peterborough.  
 Walter Healey, 28, Gooder Lane, Brighouse.  
 Thomas Henderson, M.C., M.A., B.Sc., Guildford Grammar School, West Australia.  
 Syed Husain, M.Sc., 112, Gower Street, W.C. 1.  
 Gilbert Jessop, M.Sc., Ph.D., 453, Glossop Road, Sheffield.  
 Brian Charles Lavers Kemp, B.A., Wellington College, Berks.  
 Banarsi Das Laroia, B.A., B.Sc., 3, Oxford Road, Teddington.  
 John Joseph Lennon, M.Sc., 6, Bartlemas Road, Oxford.  
 Ivan Roy McHaffie, B.A., M.Sc., 37, King Henry's Road, N.W. 3.  
 Neil McLean, M.A., B.Sc., 127, Blenheim Place, Aberdeen.  
 Leslie George Manchester, B.Sc., 557, Green Lanes, Hornsey, N. 8.  
 William Alfred Nottage Markwell, 26, Huntsmoor Road, S.W. 18.  
 Charles Henry Lawrence Miller, 50, Rowden Road, Beckenham.  
 Horace Winston Palmer, B.Sc., 15, Hollingdean Terrace, Brighton.  
 Austin McDowell Patterson, Antioch College, Yellow Springs, Ohio, U.S.A.  
 Ernest Phillis, B.Sc., 22, Fairfield Terrace, Dewsbury Road, Leeds.  
 Jonathan Pollitt, B.A., 17, Caversham Avenue, Palmers Green, N. 13.  
 Charles Raymond Porter, M.Sc., A.I.C., 126, Linden Road, Bournville, Birmingham.  
 Evan Emrys Price, B.Sc., Rock House, Heathfield, Swansea.  
 Rose Rachel Sass, B.Sc., Newnham College, Cambridge.  
 Albert Seiver, B.Sc., A.I.C., 84, Vineyard Hill, Wimbledon Park, S.W. 19.  
 Frederick Francis Percival Smith, B.A., B.Sc., Peterhouse, Cambridge.  
 Robert Frederick Smith, 254, Higham Hill Road, Walthamstow, E. 17.  
 William Ernest Soper, B.Sc., 50, Aislibie Road, Lee, S.E. 12.  
 Herbert Kenneth Southern, B.Sc., Government Laboratory, Strand, W.C. 2.  
 Frank Harland Swire, 152, Queen's Road, Halifax.  
 Harold James Tattersall, B.Sc., Ph.D., 141, Thorold Road, Ilford.  
 Elvera Annie Tricker, 319, Norwich Road, Ipswich.  
 Norman Leopold Tyler, 9, St. Paul's Gardens, Spennymoor.  
 Herbert Ward Vernon, B.Sc. 245, Albert Road, N. 22.  
 Ewart Harrod Williams, B.Sc., A.I.C., 31, Thornsbeach Road, Catford, S.E. 6.  
 Gwyn Williams, B.Sc., Cae Ffynnon, Llandudno Junction.  
 John Laurence Wiltshire, B.Sc., 36, Fordel Road, Catford, S.E. 6.  
 Wilfred Fisher Wyatt, M.Sc., North Anston, Nr. Sheffield.

The following were formally admitted Fellows of the Chemical Society: W. J. V. Ward, H. F. Halliwell, R. J. W. Le Fèvre, I. J. Faulkner, J. Thurgood, and T. W. Jones.

The following papers were read:

- "Further studies on a new chlorinating agent. Preparation of polychloro-derivatives of toluene." By O. SILBERRAD.  
 "The configuration of the ammonium ion." By W. H. MILLS and E. H. WARREN.

The following paper was taken as read :

“ Ring-chain tautomerism. Part XV. The phenol-succineins and -glutareins.” By S. DUTT.

Ordinary Scientific Meeting, Thursday, November 19th, 1925 at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., Vice-President in the Chair.

The CHAIRMAN referred to the loss sustained by the Society, through death, of the following Fellows :

	Elected.	Died.
John Lloyd T. Jones .....	Feb. 7th, 1901.	Nov. 12th.
Frank George Pope .....	Feb. 18th, 1909.	Oct. 29th.
Robert Llewellyn Taylor .....	Jan. 15th, 1874.	Nov. 8th.

The CHAIRMAN announced that :

1. The Council has decided that the next Annual General Meeting and Dinner to take place on Thursday, March 25th, 1926, shall be held in Manchester. A local Sub-Committee has been appointed to make arrangements and full particulars will be announced later.

2. An Informal Meeting will be held in the Rooms of the Society on Thursday, December 17th, immediately after the conclusion of the formal business of the Ordinary Scientific Meeting at 8 p.m. Light refreshments will be provided, and smoking will be permitted, except on the Library Floor. The Council will welcome assistance from Fellows who can add to the interest of the Meeting by showing experiments or exhibiting apparatus, and those able to do so are requested to communicate with the Assistant Secretary not later than Monday, December 7th.

The following were formally admitted Fellows of the Chemical Society : Cyril C. Harris, John S. Carter, and T. H. Clare.

Certificates were read for the first time in favour of :

William Blakey, jun., B.A., 14, Marshall Road, Cambridge.

Herbert Clayton, M.A., B.Sc., The Dyson Perrins Laboratory, South Parks Road, Oxford.

John Charles Forsyth, 62, Worcester Street, Christchurch, New Zealand.

Ankarath Sankunni Mannadi Nayar, M.B., B.S., Ph.D., The Medical College, Madras.

William Bennett Price, B.Sc., The Laurels, Woolwich Road, Belvedere.

Madhavlal Sukhlal Shah, M.Sc., 22, Oxford Road, Putney, S.W. 15.

George Ernest Thompson, 7, Campbell Road, Bow, E. 3.

Bernard William Town, B.Sc., A.R.C.S., 79, The Grove, Hammersmith, W. 6.

Victor Martin Trikojus, B.Sc., Queen's College, Oxford.

Henry Woolf, P.O. Box 14, Broken Hill, Northern Rhodesia.

The following Certificate has been authorised by the Council for presentation to ballot under Bye-Law I (2) :

Edgar Calvin Le Roy Miller, M.D., Medical College of Virginia, Richmond Va., U.S.A.

The following papers were read :

- "The constitution of the metallic ozonides." By E. C. C. BALLY and R. W. RIDING.
- "Studies of dynamic isomerism. Part XX. Amphoteric solvents as catalysts for the mutarotation of the sugars." By T. M. LOWRY and I. J. FAULKNER.
- "Studies of valency. Part V. Absorption spectra of halogen and sulphonic derivatives of camphor. Origin of the ketonic absorption band." By T. M. LOWRY and G. OWEN.
- "Studies of valency. Part VI. General and selective absorption of halogen derivatives of methane. The origin of general absorption." By T. M. LOWRY and R. R. SASS.

The following paper was taken as read :

- "Studies of valency. Part VII. Surface polarity and the reaction of ethylene and chlorine. The effect of the adsorbed water layer." By R. G. W. NORRISH and G. G. JONES.

List of papers, or abstracts thereof, received between October 16th and November 19th, 1925. (This list does not include the titles of papers which have been read at an Ordinary Scientific Meeting, or which have appeared in the Journal.)

- "Polymerisation of  $\beta$ -glucosan. The constitution of synthetic dextrans." By J. C. IRVINE and J. W. H. OLDHAM.
- "The action of mercurous nitrate on chloroauric acid." By W. B. POLLARD.
- "The freezing of inorganic hydrogels." By J. R. I. HEPBURN.
- "The bromination of some 5-substituted 1-phenylbenzthiazoles." By R. F. HUNTER.
- "Studies on the dependence of optical rotatory power on chemical constitution. Part VI. Rotatory powers of phenyl, *o*-, *m*-, *p*-tolyl and  $\beta$ -naphthyl derivatives of *d*-camphorimide and *d*-camphoramidic acid." By B. K. SINGH and A. N. PURI.
- "Transformations of the sugar nitrates." By J. W. H. OLDHAM.
- "Studies in colour and constitution. Part I. The positional bathochromic influence of the methylthiol group, alone, and in conjunction with the methoxy-group." By H. H. HODGSON and F. W. HANDLEY.

- "The photochemical oxidation of hydriodic acid in ultra-violet light. Part I." By T. MOORE.
- "Ring-chain tautomerism. Part XVII. Instances showing how glutaric derivatives can simulate succinic compounds." By S. DUTT.
- "A theory of colour on the basis of molecular strain. The effect of chromophoric superposition." By S. DUTT.
- "The influence of the intensity of illumination on the velocity of photochemical changes." By F. BRIERS, D. L. CHAPMAN, and E. WALTERS.
- "The salting-out effect. The influence of electrolytes on the solubility of iodine in water." J. S. CARTER.
- "Germanium. Part II. Germanium tetrachloride and its ammonia compounds." By W. PUGH and J. S. THOMAS.
- "The action of alcoholic soda and potash upon chloronitrobenzene." By D. H. RICHARDSON.
- "The partial pressures of aqueous ethyl alcohol." By H. J. E. DOBSON.
- "A comparison of some of the physical properties of the alkali cyanates and azides." By J. A. CRANSTON and A. Y. LIVINGSTONE.
- "Reactions for nitrites." By B. C. McEWEN.
- "Lead dihydride and lead tetrahydride." By E. J. WEEKS.
- "Some reactions of organic thiosulphates." By H. B. FOOTNER and S. SMILES.
- "Air oxidation of titanous and vanadous sulphates." By A. S. RUSSELL.
- "Complex formation in lead nitrate solutions. Part II. The quaternary system potassium nitrate-lead nitrate-barium nitrate-water." By S. GLASSTONE and E. J. RIGGS.
- "Polymerisation of acetone by calcium carbide." By T. HOPKINS.
- "Action of zinc alkyl halides on nitric esters." By T. HOPKINS.
- "Observations on the Claisen reaction." By G. T. MORGAN and E. HOLMES.
- "The specific heats of hydrocyanic acid. A reply." By E. H. INGOLD.
- "The relation of homogeneous to catalysed reactions. The catalytic decomposition of hydrogen iodide on the surface of platinum." By C. N. HINSHELWOOD and R. E. BURK.
- "The action of hydrogen fluoride on compounds of selenium and tellurium. Part II. Tellurium dioxide." By E. B. R. PRIDEAUX and J. O'N. MILLOTT.
- "Halogenation of 2:6-dimethylbenzbisthiazole and of 2:4-diphenyl-3:5-diphenyliminotetrahydro-1:2:4-thiodiazole." By R. F. HUNTER.

- "The reaction between hydroxylamine and ferric chloride." By A. D. MITCHELL.
- "The equilibria underlying the soap-boiling processes. The system potassium oleate-potassium chloride-water." By J. W. MCBAIN and W. J. ELFORD.
- "The solubility of sodium iodide in ethyl alcohol." By F. E. KING and J. R. PARTINGTON.
- "Iodination in the carbazole series." By S. H. TUCKER.
- "The chemistry of the caryophyllene series. Part I." G. G. HENDERSON, J. M. ROBERTSON, and (in part) C. A. KERR.
- "On the Budde effect in bromine. Part I. The photoactive constituent in wet bromine." By B. LEWIS and E. K. RIDEAL.
- "On the Budde effect in bromine. Part II. The kinetics of the reaction and the light absorption of wet and dry bromine." By B. LEWIS and E. K. RIDEAL.
- "The constitution of the benzene nucleus." By B. C. McEWEN.
- "Keto-enol isomerism of ethylenebisacetylacetone." By G. T. MORGAN and C. J. A. TAYLOR.
- "A buffer mixture for the alkaline range of hydrogen-ion concentration determinations." By W. R. G. ATKINS and C. F. A. PANTIN.
- "The influence of carbon rings on the velocity of reactions involving their side-chains. Part I. The hydrolysis of cyclic and open-chain malonic esters." By R. GANE and C. K. INGOLD.
- "The condensations of 3-bromo-, and 3-nitro-*p*-dimethylamino-benzaldehydes with ethyl acetoacetate and ammonia." By L. E. HINKEL and W. R. MADEL.
- "The replacement of calcium carbonate by iron pyrites in nature." By C. O. HARVEY.
- "A revision of the structural formula of glucose." By W. CHARLTON, W. N. HAWORTH, and S. PEAT.

**CERTIFICATES OF CANDIDATES FOR ELECTION AT  
THE BALLOT TO BE HELD AT THE ORDINARY  
SCIENTIFIC MEETING ON THURSDAY, DECEMBER 3RD,  
1925.**

---

ANDREW, ROBERT LESLIE, Dominion Laboratory, Wellington, New Zealand. British (by birth). Analyst. Nineteen years' experience in Dominion Laboratory, N.Z., now senior assistant in charge of Food and Drugs work. Published work: "The Colorimetric Estimation of Lead in Cream of Tartar," *Analyst*, 1924, p. 129. "The Cryoscopic Method for the Detection of Added Water in Milk" (appendix to 50th Annual Report, Dominion Laboratory). (Signed by) J. S. MacLaurin, P. W. Robertson, K. M. Griffin.

BAISSAC, LOUIS, Curepipe Road, Mauritius (Indian Ocean). British. Sugar Technologist, Department of Agriculture, Réduit, Mauritius. Lecturer

in Sugar Technology, College of Agriculture, Réduit, Mauritius. (*Signed by*) James P. Ogilvie, H. Tempany, W. H. Edwards.

BARKER, WILLIAM FRANCIS, Rhodes University College, Grahamstown, S. Africa. Professor of Chemistry. Ph.D. (Liverpool). (*Signed by*) I. M. Heilbron, E. C. C. Baly, R. A. Morton.

BASDEN, RALPH, 11, Ada St., Hamilton, Newcastle, N.S.W. Teacher of Chemistry. I have been engaged for four years as Teacher of Science at Sydney Grammar School; two years Teacher of Organic and Physical Chemistry at Newcastle Technical College, and four years in Manufacturing and Analytical Chemistry. (*Signed by*) A. R. Penfold, Robt. Grant, Fred J. Berry, Richard W. Challinor.

BELL, FRANK, 11, Edwy Parade, Gloucester. British. Student. Research student at Battersea Polytechnic. (*Signed by*) J. Kenyon, F. C. Ray, Henry Phillips, A. Houssa, Harold Hunter, P. W. B. Harrison, S. Greenberg.

BENNETT, ARTHUR NEVILLE COPNALL, 27, Dale Rd., Luton. British. Research Chemist to B. Laporte, Ltd., Luton. B.Sc. (Hons.) London. Have done research under Prof. Donnan at University College, and hope to publish shortly. (*Signed by*) W. E. Garner, D. McKie, Thomas Iredale.

BETTS, HAROLD FREDERICK, 17, The Broadway, Broadstairs, Kent. British. Research Student, East London College (Univ. of London). B.Sc. (Lond.), 2nd Class Hons. Chemistry. (*Signed by*) J. R. Partington, D. C. Jones, E. E. Turner.

BIRD, JOHN CECIL, 72, Dyne Rd., Kilburn, London, N.W. 6. British. Research and Works Chemist. B.Sc. (London), A.I.C., Associate of Univ. College of Nottingham. Science Master, Grammar School, Daventry. Chemist to Messrs. L. B. Holliday & Co., Ltd., Huddersfield. Chief Chemist and Works Manager to J. W. Drysdale & Co., London. Chemist to Messrs. Intermediates and Explosives, Ltd. (Bolckow, Vaughan & Co.), Co. Durham. Chemist to Messrs. Crookes Laboratories (British Colloids, Ltd., London). Investigation with Prof. H. H. Hodgson, M.A., into Absorption Spectra of Standard Dyestuffs (Huddersfield). (*Signed by*) Herbert Henry Hodgson, F. S. Kipping, E. R. Trotman.

BIRKETT, LIONEL CHRISTOPHER WILLIAM, Moor House, North Rd., Spennymoor, Co. Durham. British. Analytical Chemist on Coke Oven and By-products Plant. 5½ years' experience in Ironworks and Coke Oven laboratories. B.Sc. (3rd Class Hons.) after 3 years' study at Armstrong College, Newcastle-on-Tyne. (*Signed by*) W. N. Haworth, G. C. Leitch, H. V. A. Briscoe.

BOYD, JAMES, P.O. Box 1162, Johannesburg, S. Africa. British. Chief Examiner of Mine Air, Chamber of Mines, Johannesburg (and Assistant to General Manager, Chamber of Mines). F.I.C., A.R.T.C. (Glasgow). Assistant to Professor of Chemistry, Royal Technical College, Glasgow, 1908-11. Chemist, Goldfields Lab., Transvaal, 1912-13. Chief Examiner of Mine Air, Chamber of Mines, Johannesburg, 1914 to date. Author of various reports on Dust in Mine Air and Methods of investigating same (published in "Chamber of Mines Annual Reports," and for circulation to the mines of the Rand). Student, Royal Technical College, Glasgow, 1904-08. (*Signed by*) G. G. Henderson, Thomas Gray, F. J. Wilson.

BRADHURST, FRANK SYMONDS, Bondi, Sydney, and c/o Holbrooks Ltd., Danks St., Waterloo, Sydney. Chief Chemist and Factory Manager. Matriculated from Sydney High School at Leaving Certificate Examination; obtained Scholarship available at the Sydney Technical College. Here I obtained the Honours Diploma with College Medal for year in Organic Chemistry, thereby becoming an Associate of the Sydney Technical College (A.S.T.C. Chem.).

Associate of the Australian Chemical Institute (A.A.C.I.). Chemist at Stedman-Hendersons, Ltd., Sweet Manufacturers, for  $2\frac{1}{2}$  years, then at Holbrooks (Australasia), Ltd., of Sydney, for 3 years, where I now hold the above position. I desire admission to the Chemical Society in order to keep in touch with modern research in the field of Food Analysis, and Food Manufacture. (*Signed by*) Richard W. Challinor, Fred J. Berry, Robert Grant, Arthur R. Penfold, S. E. Sibley.

BRITNELL, EDWARD, 9, Osterley Av., Isleworth, Middlesex. English. Chemist. B.Sc. (Honours Chemistry), London, July 1925. Assistant for 3 years to G. N. Huntly, 325, Kennington Rd., S.E. Assistant for  $1\frac{1}{2}$  years to G. T. Holloway & Co., 13, Emmett St., Limehouse. (*Signed by*) William G. Wagner, G. Nevill Huntly, Herbert F. Stephenson.

BROMFIELD, REGINALD JOHN, 141, Constantine Rd., Hampstead, N.W. 3. English. Assistant to Biochemist, The Hospital for Sick Children, Great Ormond St., W.C. For three years laboratory assistant at University College, London, under Prof. F. G. Donnan and Prof. N. Collie. For one year Acting Biochemist to Children's Hospital, Gt. Ormond St. For past two years Biochemical assistant, Hospital for Sick Children, Great Ormond St. Desire to become a member in order to receive the Journal and to keep in touch with current chemical literature, together with access to Library. (*Signed by*) J. N. Collie, Henry Terrey, Fred J. Kettel, J. Wielife Peck.

BURSTALL, FRANCIS HEReward, 12, Adelaide Road, Teddington, Middlesex. British. Research Chemist. D.S.I.R. Chemical Research Laboratory, Teddington. 1st Class Honours B.Sc., Birmingham University. (*Signed by*) G. T. Morgan, E. Holmes, C. E. Wood.

BUTTERFIELD, ARCHER JOHN WILLIAM, 163, Northumberland Park, Tottenham, N. 17. English. Articled Pupil in Engineering. Is desirous of keeping in touch with progress in the Science of Chemistry by attending the meetings and receiving the publications of the Society. (*Signed by*) W. J. A. Butterfield, Ernest M. Hawkins, E. R. Bolton.

CARLILE, JOHN HILDRED GEORGE, 29, Orlando Rd., Clapham, S.W. 4. British. Chemical Research Student, Royal College of Science. A.R.C.Sc., B.Sc. (*Signed by*) H. J. T. Ellingham, James C. Philip, H. F. Harwood.

CHALK, LESLIE JAMES, 14, Shrubbery Rd., Southall, Middx. Student (East London College). B.Sc., 1st Class Hons. in Chemistry. J. R. Partington, E. E. Turner, Elwyn Roberts.

CHARAN, RAMA, Allahabad, India. Indian (British). Glass Technologist, Govt. of India State Technical Scholar, B.Sc. from Allahabad University, 1922. Subjects: Maths., Physics, Chemistry, and English. B.Sc. Tech. from Sheffield University, 1924. Subjects: Glass Technology, Fuel, Refractory Materials, Geology and Mineralogy of Glassmaking Materials. For one year after graduation did research work on glasses containing more than one alkaline oxide and silica-lime. (*Signed by*) W. E. S. Turner, C. J. Peddle, F. G. Tryhorn.

CORRAN, JOHN WILLIAM, Research Laboratory, Carrow Works, Norwich. British. Physical and Biochemist. B.Sc. (Liv.), 1st Class Hons. Chem., 1921; Ph.D. (Liv.), 1923; A.I.C. Two years Research Physical Chemistry under Prof. W. C. M. Lewis; two years as physical and biochemist to Liverpool Cancer Research Committee. Publications: *J. Amer. Chem. Soc.*, 1922, 44, 1673; 1923, 45, 1627. *Biochem. J.*, 1924, 18, 1358, 1364. (*Signed by*) W. C. M. Lewis, E. C. C. Baly, E. Morrison, Leslie J. Harris.

COTTER, JOHN HAROLD, 52, Aspen Grove, Lodge Lane, Liverpool. British. Certificated School-teacher; formerly a student of Sheffield University. I

wish to obtain the Fellowship of the Society in order to receive the Journal and Abstracts, and thus keep in touch with advances in Chemistry. (*Signed by*) W. P. Wynne, F. G. Tryhorn, E. G. Turner, D. M. Bennett.

CROWTHER, EDWARD MORTIMER, Rothamsted Exptl. Station, and Bourtree, 24, Clarence Road, Harpenden, Herts. British. Assistant Physical Chemist and "Empire Cotton Growing Corporation," Soil Physicist, Rothamsted Exptl. Station. D.Sc. (Leeds), F.I.C., A.Inst.P. Publications on Physical Chemistry of Soils. *Journ. Agric. Sci.*, 1925, **15**, 201-255, 300-302, 303-306; *Trans. Faraday Soc.*, 1922, **17**, 317-321. Conjointly: *Journ. Agric. Sci.*, 1924, **14**, 221-231; 1925, **15**, 68-88; *Proc. Royal Soc.*, 1925, **106A**, 33-51, 215-222, 233-242; *Annals of Applied Biology*, 1925, **12**, 152-190. (*Signed by*) E. J. Russell, H. J. Page, C. T. Gimingham.

DICKINSON, FRANK EDWIN, Research Establishment, Sutton Oak, St. Helens, Lancs. British. A/g Superintendent, The Research Establishment, Sutton Oak, St. Helens, Lancs. Actively engaged in Chemical Industry as Analytical and Research Chemist and as Assistant Manager and Manager of Chemical Works for past fourteen years. Educated at King Edward's School, Stratford-on-Avon, and University of Birmingham. No papers published as all work of secret nature or commercial value. (*Signed by*) J. Davidson Pratt, E. Wheeler, Francis H. Carr.

DOLPHIN, JOSEPH RAYMOND, Chemical Department, University Rd., Edgbaston, Birmingham. British. Research Student. Pass B.Sc. Birmingham, 1st Class, 1923; Honours B.Sc. Birmingham, 1st Class, 1924. Research Student under Professor Morgan, O.B.E., D.Sc., F.R.S., from 1924-25 to become Research Chemist at J. A. Crabtree & Co., Ltd., Walsall, in Sept. 1925. (*Signed by*) G. T. Morgan, C. E. Wood, E. Ashley Cooper.

DONOVAN, WILLIAM, Dominion Laboratory, Wellington, New Zealand. British. Analyst, Dominion Laboratory, N.Z. M.Sc. (New Zealand University). Twenty years' experience in analytical work; now Assistant Dominion Analyst. Published work includes "Corrosion of Muntz Metal in Sea Water," *J.S.C.I.*, XLIII, 13, 72x; "Estimation of Nitrogen in Coal," *The Analyst*, Feb. 1924. (*Signed by*) J. S. MacLaurin, P. W. Robertson, K. M. Griffin.

DUNN, JOHN STANLEY, 39, Victoria Park, Cambridge. British. Chemist. M.A. (Cantab.), Ph.D. (London), A.I.C. Late Research Chemist, Calico Printers Assocn., Manchester; now Research Chemist, British Non-Ferrous Metals Res. Assocn. With Dr. E. K. Rideal: *T.*, 1923, 123, 1242; *T.*, 1924, 125, 676. (*Signed by*) R. G. W. Norrish, Eric K. Rideal, H. McCombie.

DYDE, JOHN HORSEFALL, 18, Dean Rd., Scarborough. British. Student at the University, Leeds, who intends to pursue post-graduate work in Biochemistry. Final year B.Sc. (Honours Chemistry). (*Signed by*) C. K. Ingold, B. Topley, H. M. Dawson.

DYSON, GEORGE MALCOLM, 36, Hillsborough Road, E. Dulwich, London, S.E. 22. British. Research Chemist. B.A. (Oxon.), B.Sc., Ph.D. (London). Research in Organic Chemistry, including work on the Reactions of Thiocarbonyl Chloride with Amino-compounds, Phenols, etc. *J.C.S.*, Trans., Sept., 1924, 125, 1702; "The Reactions of Thiocarbonyl Chloride. Pt. I." (*Signed by*) D. L. Chapman, H. J. George, L. Rubenstein.

ECCLLES, ALFRED, 18, Cambrian Terrace, Holbeck, Leeds. British. Research Student (University of Leeds). B.Sc., 1st Class Hons. (Pure Chemistry), 1925. (*Signed by*) C. K. Ingold, P. K. Dutt, W. A. Wightman, J. W. Baker.

EDWARDS, EDWIN FRANCIS, Kogarah, Sydney, N.S.W., c/o Holbrooks (Australasia), Limited, Waterloo, Sydney. Works Chemist and Assistant

Factory Manager. Matriculated from High School at Leaving Certificate Examination, and gained Scholarship to Sydney Technical College. Attended the above College for five years—thereby completing the Diploma Course—and was subsequently granted the Associateship of the College, and the Diploma in Organic Chemistry. I am also an Associate of the Australian Chemical Institute. I was Assistant Chemist at the Woolwich Chemical Co., Sydney, for a period of two years, and Analyst at H.M. Customs, Sydney, for twelve months. At present I hold the above-mentioned position on the Staff of Holbrooks (Australasia), Limited, of Sydney. I desire admission to the Chemical Society in order to keep in touch with modern chemical literature and progress. (*Signed by*) Richard W. Challinor, Fred J. Berry, Robert Grant, Arthur R. Penfold, S. E. Sibley.

EDWARDS, JOHN MOELWYN, 92, Jamaica Rd., Rotherhithe, S.E. 16. British. Chemist and Pharmacist and Optician. (1) Early education at the Meirioneth County Grammar School. (2) Three years student of Chemistry at the Festiniog Higher Grade School. (3) Studied Analytical Chemistry and Physics under Mr. J. Thomas, B.Sc., at Muter's School of Chemistry. (4) Passed the Qualifying Examination of the Pharmaceutical Society of Great Britain in 1905. (5) Four years Sight Testing Optician with Mr. Hugh Jones, F.S.M.C., D.B.O.A. Am particularly anxious to keep in touch with Analytical work. (*Signed by*) Frank B. Arnold, John J. Laws, Percy Barrs.

ELLIOTT, GEORGE ALBERT, 263, Kennington Road, London, S.E. 11. British. Ramsay Memorial Fellow. M.Sc. (Lond.). (*Signed by*) L. F. Gilbert, S. Barratt, W. E. Garner.

EVANS, ERIC BERTRAM, 2, Boxmoor Terrace, Southchurch, Southend, Essex. English. Student. For two years a student at East London College; at present engaged in research there. Awarded 2nd Class in B.Sc. Hons. Lond., 1925. (*Signed by*) J. R. Partington, E. E. Turner, Elwyn Roberts.

EWBANK, (Miss) ELINOR KATHARINE, 22, Park Crescent, Oxford. British. Engaged in original research. Took 1st Class in Honours, School of Chemistry, Oxford, 1903. E. C. C. Baly and E. K. E., 87, 1347; 87, 1355. N. V. Sidgwick and E. K. E., 119, 486; 121, 1844; 125, 2268. (*Signed by*) W. H. Perkin, N. V. Sidgwick, D. Ll. Hammick.

FARROW, (Miss) ELIZABETH MONICA OPENSHAW, 37, Chalfont Rd., Oxford. British. Demonstrator in Old Chemistry Dept., Oxford. Lecturer in Chemistry to 5 Women's Societies. M.A. (Oxon.) (*Signed by*) W. H. Perkin, N. V. Sidgwick, B. Lambert, M. P. Applebey, Allan F. Walden, E. G. J. Hartley, Frederick Soddy, J. Masson Gulland, S. G. P. Plant.

FREE, OLIVER, The Lodge, Mansfield College, Oxford. British. Demonstrator of Inorganic Chemistry. B.A., 2nd Class Honours. Research Student in Physical Chemistry (Radioactivity). (*Signed by*) M. P. Applebey, Frederick Soddy, B. Lambert, N. V. Sidgwick, A. F. Walden.

FREEMAN, WILLIAM MARSHALL, 16, Oakwood Avenue, Beckenham, Kent. British. Of the Honourable Society of the Middle Temple, Barrister-at-Law, Recorder of Stamford, and formerly Member of the Pharmaceutical Society of Gt. Britain. Author of "The Patents and Designs Act 1907, with Appendix on Chemical Patents." Occasional contributor to legal and other journals on Food and Drugs legislation, etc. Interested particularly in the promotion of the study of chemico-legal science especially with reference to the administration of the criminal law. (*Signed by*) Ernest C. Bennison, H. Berry, Harry Silvester.

GEE, EVA FLORENCE, The Station, L.N.E.R., Howsham, Lincoln. British.

Student of Chemistry at Bedford College. (*Signed by*) J. F. Spencer, H. Crompton, J. Stewart.

GEMMELL, JAMES WALTER SHANKS, Helen's Villa, Fleming Place, St. Andrews. British. Research Chemist. B.Sc. (Hons.) St. Andrews; now employed in Research Dept., Jute Industries, Ltd., Dundee, and desirous of keeping in touch with recent developments in chemical science. (*Signed by*) A. Killen Macbeth, James Craik, John Pryde.

GLOVER, FRANCIS REGINALD, 98/100, St. Peter's Street, Nottingham. British. Managing Director, Cooke & Glover, Engineers, Ltd., Engineers and Consulting Chemists, Nottingham, M.I.H.V.E., A.M.I.S.E. (*Signed by*) E. B. R. Prideaux, J. B. Firth, B. D. Shaw.

GOUDIELOCK, WILLIAM BOUCH O'BRIEN, 28, Fairfield Lane, Barrow-in-Furness. British. Chief Analyst, Vickers Ltd., Barrow-in-Furness. Full Technological Certificate, City and Guilds Institute, in Chemistry, Metallurgy, and Iron and Steel. Pupil in Vickers' Lab. under H. B. Weeks, F.I.C., for 5 years. Chief Laboratory Assistant for 8 years. Chief Analyst ever since. Lecturer for 2 years to Vickers' Engineering Apprentices on Chemical and Metallurgical Subjects in Connection with Firm's Scheme for Higher Education of Apprentices. Lecturer to Barrow Engineer's Assoc., Jan. 1920 and Jan. 1923. I am desirous of keeping in close touch with modern developments in Scientific Chemistry. (*Signed by*) H. B. Weeks, A. H. Munday, W. J. Davison.

GRIGG, FELIX JOHN THEODORE, Christchurch (N.Z.). British. Government Analyst, Government Buildings, Christchurch, N.Z. M.Sc. (N.Z.) with Honours in Chemistry. A.I.C. (Great Britain). Seven years' experience in analytical work. Now Government Analyst at Christchurch (N.Z.). Published work: "Geochemistry of the Thermal Lakes, North Island, N.Z." (*N.Z. Journal of Science and Technology*, 1922, Volume 5, page 156). (*Signed by*) J. S. Maclaurin, P. W. Robertson, K. M. Griffin.

HALL, GEORGE VINCENT, 6, Borough Road, Bridlington, Yorks. British. Student. Bachelor of Science, University of Leeds, June 1925. (*Signed by*) C. K. Ingold, H. M. Dawson, W. Lowson, P. K. Dutt.

HALL, JOHN, 202, Burton Rd., Derby. British. Chemist. M.Sc. (Leeds), A.I.C. Three years in Lab. of Sir W. G. Armstrong-Whitworth & Co.; two years in Lab. Dyehouse and Colour Plant of British Celanese. *J.C.S.*, 123, 2029-2037. (*Signed by*) A. G. Perkin, G. Reeves, W. P. Skertchly.

HARE, WILLIAM ROWAN, 220, Eastfield, Peterborough. British. Student of Chemistry in the University of Oxford. Desirous of receiving literature (*Signed by*) D. Ll. Hammick, S. G. P. Plant, E. Hope.

HEALEY, WALTER, 28, Gooder Lane, Brighouse. English. Student, University of Leeds. Chemical Student who hopes to take up research. (*Signed by*) C. K. Ingold, P. K. Dutt, W. A. Wightman.

HENDERSON, THOMAS, M.C., M.A., B.Sc., Toronhill Schoolhouse, Dunfermline. Scottish. Demonstrator in Chemistry (Inorganic), University of Leeds. M.A., B.Sc., St. Andrews, 1921. Holding a grant from the Dept. of Scientific and Industrial Research, carried on research work at St. Andrews University, under direction of Sir James C. Irvine, and have held the appointment noted above since October 1922. Vol. 121, 1922, Trans., p. 892; Vol. 123, 1923, Trans., p. 1130. (*Signed by*) R. Whytlaw-Gray, H. S. Patterson, B. Topley, W. Lowson, J. C. Irvine, Ettie S. Steele.

HIRST, HERBERT SM, Trinity College, Cambridge. British. Research Assistant to Dr. E. K. Rideal, under Department of Scientific and Industrial Research Regulations. First class honours graduate in Physics and Chemistry

of St. Andrews University, with two years' research experience in Cambridge. "The Thermal Decomposition of Nitrogen Pentoxide," 1925, 127, 657. (*Signed by*) Eric K. Rideal, W. H. Mills, Ulick R. Evans.

HUSAIN, SYED, 112, Gower St., London, W.C.1. Indian. Student. M.Sc. (Aligarh Muslim University, India). (*Signed by*) J. R. Partington, E. E. Turner, Elwyn Roberts.

IWADARE, TORU, c/o Banyu Pharmaceutical Co., Ltd., 174, Shimomeguro, Tokyo, Japan. Japanese Proper. Became Chief Chemist and Managing Director of Banyu Pharmaceutical Co., Ltd., in September 1915. Have two years' experience as Assistant of the Chemical Dept. of the Tokyo Imperial University, and ten years' experience as Chief Chemist and Managing Director of Banyu Pharmaceutical Co., Ltd. Graduate, College of Science (Chemistry), Tokyo Imperial University, 1913. (*Signed by*) Joji Sakurai, T. Takamatsu, Y. Asahina.

JAYEWARDENE, DAVID CHRISTOPHER MENDIS, Fern Bank, Moratuwa, Ceylon. Sinhalese, British. Science Master, Prince of Wales' College, Moratuwa. (1) Science Master, St. John's College, Panadura, Ceylon (1918 and 1919). (2) Asst. Chemist, Butter Substitutes Supplies, Ltd., Colombo (1920). (3) Science Master, Prince of Wales' College, Moratuwa (since 1921). (*Signed by*) W. N. Rae, J. P. C. Chandrasena, K. V. Rau.

JESSOP, GILBERT, 453, Glossop Rd., Sheffield. British. Research Chemist. M.Sc., Ph.D. (Sheffield). Three years' Research in Physical Chemistry. Papers in the *Proc. Roy. Soc.*, 1925, 98B, 206 (with Mr. N. K. Adam), and in the *J.C.S.* (with Mr. F. G. Tryhorn), 1925, 127, 1320; (with Mr. N. K. Adam), 1925, 127, 1863. (*Signed by*) W. P. Wynne, F. G. Tryhorn, N. K. Adam.

JOHNSON, CHARLES BENJAMIN, 134, Preston New Road, Blackburn. British. Minister of Religion (Fellow of Royal Astronomical Society). I desire to keep abreast, by means of the Society's Publications, of advance in General and Physical Chemistry. (*Signed by*) G. W. F. Holroyd, J. Hindle, Robert H. Pickard.

JONES, WALTER IDRIS, 7, Manor Street, Cambridge. Welsh. Research Student. Gonville and Caius College, Cambridge. Ph.D. (Cantab.), B.Sc. (Wales), etc. *Trans. Chem. Soc.*, 1923, 123, 2688; 1924, 125, 2590. (*Signed by*) Hamilton McCombie, John Dexter, Harold A. Scarborough.

KEENAN, HENRY WILFRID, 80, Upper Richmond Road, East Sheen, S.W. 14. British. Works Chemist. Practical experience in various branches of Analytical and Manufacturing Chemistry founded on a three years' Systematic Apprenticeship (with evening studies) under Dr. Julius Holzapfel and Dr. P. E. Bowles, F.I.C., by whom indentures are signed. Invented processes (including design and erection of plant for large scale production) dealing with (a) Paint and Varnish Industry, (b) Celluloid Industry, (c) Oils, and operated successfully. (*Signed by*) Charles Dorée, Francis Arnall, J. C. Crocker.

KEMP, BRIAN CHARLES LAYERS, Wellington College, Berks. British. Schoolmaster. Chemistry Master (VIth Form) at Wellington College; B.A. (Oxon.). 1922-23, research work on derivatives of Dianisoyl Methane. (*Signed by*) G. Watson Gray, D. LL. Hammick, B. Lambert.

KING, CHARLES, F.S.A. (Scot.), 21, Newton Place, Glasgow. British. Electro-therapeutist. Fellow of the Society of Science, Lond. Applicant is in practice as Electro-therapeutist, and is desirous of keeping in touch with current chemical progress. (*Signed by*) G. G. Henderson, J. Roberts, Archd. N. Currie.

KOCH, FREDERICK KARL VICTOR, 9, Crossfield Road, Hampstead, N.W. 3.

English. Research in Physical Chemistry, Imperial College of Science and Technology. B.Sc. (1st Class), A.R.C.S. (2nd Class). (*Signed by*) James C. Philip, H. J. T. Ellingham, H. F. Harwood.

LANGFORD, CHARLES DUDLEY, 43, Ashbourne Av., Temple Fortune, London, N.W. 11. British. Research Student (Organic Chemistry), Royal College of Science. A.R.C.S., B.Sc. Honours (passed 1925, to be awarded 1926 owing to regulations). (*Signed by*) G. A. R. Kon, R. W. West, E. H. Farmer.

LAROLA, BANARSI DAS, Pindi Street, Ludhiana, Punjab, India. Indian. Student. B.Sc. (Hons.) Punjab University (India), B.A. (Hons.) Oxford University. At present student of Imperial College of Science and Technology (for Ph.D.). (*Signed by*) E. H. Farmer, G. A. R. Kon, M. A. Whiteley.

LASZLO, HENRY GUINNESS DE, 3, Fitzjohn's Avenue, Hampstead, N.W. 3. British. Research Chemist. B.A. Hons. (Cantab.), Ph.D. (Zurich). (*Signed by*) M. A. Whiteley, G. Ingle Finch, Samuel Smiles.

LEATHERBARROW, BERTRAM GREY, Hill Crest, Station Rd., Brimington, Chesterfield. British. Senior Assistant Teacher, Brimington Central School. Intermediate B.Sc. Two years subsequent graduation courses. Headmaster, Brimington Central Evening School, teaching all the Technical Courses. Student, Liverpool University 1919-1923. (*Signed by*) E. C. C. Baly, W. C. McC. Lewis, I. M. Heilbron, H. J. Stern.

LENHER, SAM, 15, Gordon Street, London, W.C. 1. American. Research Student at the Ramsay Laboratory, University College, London. Graduate of the University of Wisconsin (B.A. Degree), 1924. Internal student for the Ph.D. degree, University College, London, one year. McHaffie and Lenher, *J.C.S.*, 1925, 127, 1559-1572. (*Signed by*) F. G. Donnan, W. E. Garner, J. A. Currie.

LENNON, JOHN JOSEPH, 6, Bartlemas Road, Oxford. Irish. Research Student. M.Sc., National University of Ireland, 1924, 1851 Scholar. Paper in collaboration with Hugh Ryan, D.Sc., *Proc. Royal Irish Acad.*, xxxvii, B, p. 27. (*Signed by*) W. H. Perkin, Francis Lions, R. D. Haworth, John Rankin.

MACARTNEY, WILLIAM, c/o Grattan & Co., Ltd., Belfast. British. Pharmaceutical Chemist. Chief Chemist of Messrs. Grattan & Co., Ltd., Wholesale Manufacturing Chemists and Aerated Water Manufacturers. Member of the Pharmaceutical Society of Ireland. Vice-President North Irish Pharmaceutical Society, Vice-President Ulster Drug Trade Association. No published papers in the *Journal of the Chemical Society*. In order to keep in touch with current advances in Chemistry. (*Signed by*) Henry Wren, Chas. J. Still, A. W. Stewart, Theo. Harper.

McHAFFIE, IVAN ROY, 37, King Henry's Rd., London, N.W. 3. Canadian. Research Student, University College, London. B.A., M.Sc. University of Manitoba, Canada. "The Adsorption of Water from the Gas Phase on Plane Surfaces of Glass and Platinum," *J.C.S.*, 1925, 127, 1559-1572. (*Signed by*) F. G. Donnan, W. E. Garner, S. Barratt.

McLEAN, NEIL, M.A., B.Sc., 127, Blenheim Place, Aberdeen. British. Station Director of the British Broadcasting Station at Aberdeen. Applicant is a Master of Arts and Bachelor of Science of Glasgow University, and is much interested in chemical science and desirous of having the best available literature on this subject for the purposes of his work. (*Signed by*) J. F. Tocher, G. G. Henderson, Archd. N. Currie.

MANCHESTER, LESLIE GEORGE, 557, Green Lanes, Hornsey, N. 8. British. Student. Two years a student at East London College; now engaged in

research work at same college; awarded 2nd Class in B.Sc. Hons. Lond. 1925. (*Signed by*) J. R. Partington, E. E. Turner, R. J. W. Le Fèvre.

MARKWELL, WILLIAM ALFRED NOTTAGE, 26, Huntsmoor Road, S.W. 18. English. Chemist. Desire to receive the *Journal* and to keep in touch with the progress of Chemical Science. (*Signed by*) E. W. Lucas, S. Greenberg, F. C. Ray, J. L. White, Henry Phillips.

MARTIN, WILLIAM FRANCIS, 27, Shandon Crescent, Edinburgh. British. Work's Chemist, in the employment of Messrs. T. & H. Smith, Ltd., Blandfield Chemical Works, Edinburgh. Fellow of Institute of Chemistry (F.I.C.), Member of Pharmaceutical Soc. of Gt. Britain (M.P.S.). (*Signed by*) James Walker, Alexander J. Dey, James Watt.

MILLER, CHARLES HENRY LAWRENCE, 50, Rowden Rd., Beckenham, Kent. British. Student (B.Sc. Honours Chemistry) at East London College. At present doing research work. Desirous of keeping in touch with modern Chemical Research. (*Signed by*) J. R. Partington, E. E. Turner, D. C. Jones, W. H. Patterson.

MOORE, ARTHUR, Highfield, Oakworth, Keighley, Yorks. British. Student (Chemistry). 3rd Year (final) Hons. Chemistry, Royal Coll. of Science, London, S.W. 7. (*Signed by*) H. L. Riley, H. F. Harwood, H. D. Murray.

MORRISON, ALEXANDER JOHN, Sydney, N.S.W. Assistant Superintendent of Testing and Inspection, Public Works Dept., Sydney. *Training*: Student for 3 years (night course) in the Chemical and Assay Laboratory of the late William Grosse, Mining Engineer and Metallurgist. *Sydney Technical College*: 4 years' course practical chemistry; 3 years' course theoretical chemistry; 2 years' course organic chemistry. Engaged on special investigation in connection with fixed oils and alloys. *Original Papers*: (With F. R. Morrison), "Examination of the fixed oil of the Queensland Nut," read before the Sydney Technical College Chemical Society (Vol. 1, pages 84—88). "Testing of Sand for Use in Portland Cement Mixtures," Paper read before the Sydney Technical College Chemical Society 1914 (Vol. 1, pages 17—26). "Permeability of Concrete" (with the late B. J. Smart, B.Sc. (London), Paper read before the Engineering Association of New South Wales (Vol. xxxiii, Part 2, page 1). Have been engaged in the chemical and mechanical testing of all classes of structural materials in the Testing Laboratory, Public Works Department, New South Wales, for the past 27 years. These materials include Portland cement, steel, alloys, asphaltum, tars, paints, oils, etc. Representative of the Australian Chem. Institute on the Engineering Standardisation Committee dealing with the drawing up of a Standard Specification for Portland Cement for the Commonwealth of Australia. (*Signed by*) A. R. Penfold, R. Grant, Richard W. Challinor, Fred J. Berry, George Z. Du Pain.

MORRISON, FRANK RICHARD, Brae Street, Waverley, Sydney, N.S.W. Australia. Asst. Economic Chemist, Technological Museum, Sydney. Diploma in Chemistry of Sydney Technical College, 1921. Associate of Australian Chemical Institute since 1920. Member of Royal Society of N.S.W. since 1921. Member of Sydney Technical College Chemical Society since 1913, and Joint Hon. Secretary since 1921. *Positions held*: One year in laboratory of Sydney Technical College; three years in laboratory of Metropolitan Board of Water Supply and Sewerage, Sydney; nine years in present position at Technological Museum, Sydney. *Original papers*: "The Occurrence of Rutin in the leaves of the *Boronia* (N. O. Rutaceæ)" (read before the Royal Society of N.S.W., 2nd November, 1921); "The

essential oil of *Kunzea corifolia* " (read before the Royal Society of N.S.W., 1st November, 1922); "A Chemical examination of the seeds of the 'Bunya Bunya' (*Araucaria Bidwilli*, Hooker)" (read before the Royal Society of N.S.W., 3rd December, 1924). *Conjointly with Mr. A. R. Penfold, F.A.C.I., F.C.S.* "Preliminary note on a new stearoptene (probably a phenol ether) occurring in some essential oils of the Myrtaceae" (read before the Royal Society of N.S.W., 5th July, 1922); "The essential oil of *Eriostemon Crowei* (*Crowea saligna*) and the presence of a new phenol ether" (read before the Royal Society of N.S.W., 6th December, 1922); "Preliminary note on the electrolytic reduction of Piperitone" (read before the Royal Society of N.S.W., 5th September, 1923); "Notes on *Eucalyptus piperita* and its essential oils, with special reference to their Piperitone content" (read before the Royal Society of N.S.W., 2nd July, 1924). *Conjointly with Mr. A. Morrison*: "The chemical examination of the fixed oil of the Queensland Nut (*Macadamia ternifolia*)" (read before the Sydney Technical College Chemical Society, 24th June, 1923). (*Signed by*) A. R. Penfold, R. Grant, Richard W. Challinor, Fred J. Berry, George Z. Du Pain.

MURGATROYD, JOHN BLACKBURN, 90, St. George's Square, Westminster, S.W. 1. British. Demonstrator, Imperial College of Science and Technology, South Kensington. Taking up Research at the above College. (*Signed by*) H. B. Baker, J. N. Sugden, Leslie S. Theobald.

NANAVATI, CHITSUKHLAL HIRALAL, 80, Esplanade Road, Fort, Bombay. Hindoo. L.T.C., Analytical Chemist. Graduate of The Victoria Jubilee Technical Institute, Bombay; in Chemistry with special subject of Foods, Drugs and General Analysis; in Second Class with the title of Licentiate of Technical Chemistry, of the year 1921. Worked as Analytical Chemist with Messrs. Hughes & Davies and Messrs. Killick, Nixon & Co.; at present practising as Analytical Chemist. (*Signed by*) S. J. Sháh, Kapilram H. Vakil, R. G. Saraiya.

NICHOLSON, HENRY, "Aberlady," Osborne Rd., Stockton-on-Tees. English. Chemistry Master in Boys Secondary School, Stockton-on-Tees, since Nov. 1905. B.Sc. Durham University, 1904. M.Sc. for Research on the influence of the acetyl group as a protective agent in the oxidation of  $\alpha$ -acetylnaphthylamine, 1907. (*Signed by*) J. G. Taylor, J. A. Smythe, W. M. Madgin.

O'MEARA, ANNA MARIA, 83, Elsham Road, Holland Park, Kensington, W. 14. Irish. Pharmacist. M.P.S. (London). Was for 4 years trained under John Armstedt Ray, M.A., Ph.C., Trinity Coll., Dublin, at his Laboratory in 23, Nassau Street, but never took any Analytical Examination. Was 3 years Pharmacist at Bolingbroke Hospital, Wandsworth Common, S.W. 11; was 1 year at Willesden General Hospital as Pharmacist, and occasionally have worked at the M.A.B. Homerton and Park Royal, Hither Green. At present am pharmacist at the Women's Hospital, Soho Sq., and I take Students for both the qualifying and Apothecaries' Hall Exam. and train them for same. (*Signed by*) H. Lucas, A. Thomas, S. Greenberg.

PALMER, HORACE WINSTON, 15, Hollingdean Terrace, Brighton. British. Research Student, East London College. B.Sc. London, Hons. I, Chemistry. (*Signed by*) J. R. Partington, D. C. Jones, W. H. Patterson.

PARKER, NORMAN FREDERICK, 45, Sellons Avenue, Harlesden, N.W. 10. British (English). Chemical Engineer. B.A. Cambridge; Associate of Institute of Chemistry; 1st Class, Natural Science Tripos, Part II (Chemistry), 1923. (*Signed by*) W. J. Pope, C. T. Heycock, W. H. Mills.

PATTERSON, AUSTIN McDOWELL, Antioch College, Yellow Springs, Ohio,

U.S.A. United States. Professor of Chemistry, Antioch College, U.S.A. Formerly Editor of *Chemical Abstracts*. (Signed by) C. S. Gibson, T. Slater Price, John Greenaway.

PHILLIS, ERNEST, 22, Fairford Terrace, Dewsbury Rd., Leeds. British. Research Student, Leeds University. B.Sc., 1st Class Hons. in Pure Chemistry, 1925. (Signed by) J. B. Cohen, C. K. Ingold, P. K. Dutt, J. W. Baker.

POLLITT, JONATHAN, 17, Caversham Avenue, Palmers Green, N. 13. English. Chemistry Master, Hornsey County School, 1905-. B.A. (N.U.I.) Chemistry, Physics, Maths. Student (Chemistry) Birkbeck College since 1908. (Signed by) George Senter, Samuel Sugden, B. R. Heasman, F. J. Thorneycroft, A. M. Ward, Wm. W. Myddleton.

PORTER, CHARLES RAYMOND, 126, Linden Road, Bournville, Birmingham. English. Chemistry research assistant. M.Sc., A.I.C. Three years research assistant in Chemistry Department, University of Birmingham; part author of *Berichte*, 1925, 58, 333, and *J.C.S.*, 1924, 125, 731 and 1269. (Signed by) J. D. Main Smith, W. J. Hickinbottom, W. N. Haworth.

PRICE, EVAN EMBYS, Rock House, Heathfield, Swansea, Glam. British. Science Teacher, The College, Penarth, S. Wales. Graduate in Chemistry of University of Wales. Studied at University College, Swansea, 1920-1924. (Signed by) J. E. Coates, Leonard E. Hinkel, E. Stanley Hiscocks.

PRING, MARJORIE ELLEN, 86, St. Augustine's Avenue, S. Croydon, Surrey. British. Research Student at Bedford College for Women, Regent's Park. B.Sc., 1st Class Hons. in Chemistry, London University. (Signed by) J. F. Spencer, H. Crompton, M. S. Crewdson.

RÂY, JNANENDRA NATH, Calcutta. Indian. Lecturer, Calcutta University, M.Sc. (Cal.). Research Student, Manchester Univ. "Synthesis of oxyberberine" (joint author), *J.*, 1925, 127, 740; "Synthesis in the Thianthren series," *J.*, 1921, 119, 1959; "Catalytic action of Iodine in sulphonation," *J.*, 1920, 117, 1405; joint author, "Modification and extension of Friedel & Crafts' reaction," *J.*, 1920, 117, 1335. (Signed by) Robert Robinson, Arthur Lapworth, Henry Stephen, Wilson Baker.

ROBERTS, HERBERT CHARLES, 15, Estcourt Terrace, Headingley, Leeds. British. Chemist Director, Taylor's Drug Co., Ltd., P.O. Box 141, Burley Hill, Leeds. 20 years Analytical Chemist to above Co. Since 1908 Chemist Director and Superintendent under the Pharmacy Act to above Co. (Signed by) John Rennie, F. C. Savage, F. Pilkington Sargeant.

SANDERSON, PHYLLIS MARY, 7, Cresswell Place, S.W. 10. British. Research (Biochemical). I desire to become a member of this Society for the purpose of keeping in touch with current scientific investigations. (Signed by) F. G. Donnan, W. E. Garner, Henry Terrey.

SASS, ROSE RACHEL, Newnham College, Cambridge. British. Research Student. B.Sc. Hons. of the University of the Witwatersrand, Johannesburg, S. Africa. Demonstrator for 3 years. Now a research student in the Laboratory of Physical Chemistry, Cambridge University. (Signed by) T. M. Lowry, Eric K. Rideal, I. J. Faulkner.

SAXON, ROBERT, Westfield Terrace, Baildon, Yorks. British. Schoolmaster. Teacher of Chemistry at the Belle Vue Secondary School for 17 years. Teacher of Steam and Heat Engines, which included the Thermal Chemistry of Carbon and Hydrogen combustion and tests for  $\text{SH}_2$ ,  $\text{NH}_3$ , etc., in Coal and Producer Gas for 15 years in the Belle Vue Technical School (evening). Eleven years Head Master present School, The Forster School for Boys, Bradford, under the Bradford Authority; entrance to school only by

Scholarship Examination. Bachelor of Science, Victoria Univ., Manchester, 1896. Studies under Prof. Tilden, Royal Coll. of Science, London, 1900, and Prof. Watts, Geology, 1901 (Vacation Course). (*Signed by*) Barker North, Robt. D. Abell, T. W. Price.

SCIVER, ALBERT, 84, Vineyard Hill, Wimbledon Park, S.W. 19. English. Analytical and Consulting Chemist and Bacteriologist. B.Sc. (First Class Honours, University College, London), A.I.C. Assistant to Drs. S. and E. K. Rideal, 28, Victoria St., S.W. 1. Lecturer on Bacteriology applied to Chemistry at Battersea Polytechnic. (*Signed by*) F. G. Donnan, Eric K. Rideal, W. E. Garner.

SCOTT, GEORGE BATY, 37, Woodbridge Road, Knowle, Bristol. British. Organic and Inorganic Chemistry Student for two years at Central Polytechnic Institute, after passing the Qualifying Examination of Pharmaceutical Society, 1896. For some years have been closely associated with British Fine Chemicals, embracing Dye Intermediates, Research Chemicals, Saccharin and by-products. Wishful to have access to Society's Library and Publications, thus keeping up to date with the latest advances in Chemistry. (*Signed by*) J. Wicliffe Peck, D. Hughes, T. O. Kent, W. D. Wallace, Archibald Macpherson.

SCAMMELL, RUPERT BOSWOOD, c/o F. H. Faulding & Co., Ltd., Castle-reagh St., Redfern, Sydney, N.S.W. British. Manufacturing Chemist. Bachelor of Science (Sydney). Six years' experience in Manufacturing Chemistry with the above firm. I desire to keep in touch with modern chemical literature for research purposes. (*Signed by*) J. Kenner, George Harker, J. C. Earl.

SHIN, UPO, B.A.S., Agricultural Farm, Mandalay. Burman. Officiating Agricultural Chemist, Burma, Mandalay. Published as Memoirs of the Department of Agriculture in India on "The Phosphate Requirements of some Lower Burma Paddy Soils." (*Signed by*) Maung Ba, Maung Ba San, Maung Tun Tin.

SINGH, DALIP, near Tehsil, P.O. Lahore, India. Indian. Research Student, Cambridge University. Ph.D. Cambridge. (*Signed by*) W. J. Pope, W. H. Mills, Eric K. Rideal.

SMITH, FREDERICK FRANCIS PERCIVAL, Peterhouse, Cambridge. British. Research Student in the Cambridge Univ. Laboratories. 1st Class Nat. Sci. Tripos, Parts I and II. 1st Class London Ext. B.Sc. Hons. (in Chemistry). (*Signed by*) Hamilton McCombie, Harold A. Scarborough, W. A. Waters.

SMITH, ROBERT FREDERICK, 254, Higham Hill Road, Walthamstow, E. 17. British. Student of Chemistry at East London College. Desirous of keeping in touch with Modern Research. (*Signed by*) J. R. Partington, E. E. Turner, Elwyn Roberts.

SOPER, WILLIAM ERNEST, 50, Aislbie Road, Lee, London, S.E. 12. British. Research Student at East London College. B.Sc. (Lond.). (*Signed by*) J. R. Partington, E. E. Turner, Elwyn Roberts.

SOUTHERN, HERBERT KENNETH, Glenariff, Whaley Bridge, Nr. Stockport, Cheshire, also Government Laboratory, Strand, W.C. 2. British. Temporary Assistant Chemist, Government Laboratory. B.Sc. (Hons. Chem.) after 3 years and M.Sc. after a further year's research work in physical chemistry at Manchester University. Assistant Demonstrator in chemistry for 1 year at Manchester University. Six months as chemist with paint and enamel firm; 4 months at Government Laboratory. (*Signed by*) Robert Robertson, J. J. Fox, Geo. Stubbs, T. W. Harrison.

SPEIGHT, ERIC ALFRED, 61, Arthur Road, Wimbledon Park, S.W. 19.

British. Research worker in Organic Chemistry. Associateship of the Royal College of Science. B.Sc. (Lond.), Diploma of Imperial College, all in Chemistry. Have been engaged in study of Chemistry for 6 years, the last two being research. Published paper in Oct. 1924 *J.C.S.* on formation of Hydrindone derivatives. (*Signed by*) Jocelyn Thorpe, G. A. R. Kon, Arnold Stevenson.

SWIRE, FRANK HARLAND, 152, Queen's Road, Halifax, Yorks. British. Pharmacist. "Minor" Qualification of the Pharmaceutical Society. Member of the Pharmaceutical Society of Gt. Britain. Late Student in Chemistry at the Halifax Technical College and at The School of Pharmacy, Bloomsbury Sq., London, W.C. 1. (*Signed by*) T. E. Wallis, F. Browne, W. J. Stansfield.

TATTERSALL, HAROLD JAMES, B.Sc., Ph.D., 141, Thorold Road, Ilford, London, E. British. Research Chemist. Graduate of St. Andrews University. B.Sc., Ph.D. Research work carried out at University College, Dundee. Presently engaged in research photographic chemistry. Publishing under authorship McKenzie and Tattersall, probably in November 1925. (*Signed by*) Alex. McKenzie, O. Rhys Howell, R. Roger, John Foggie.

THORPE, WILLIAM VEALE, 270, Balham High Road, London, S.W. British. Research Student, Medical Research Council, Mount Vernon, Hampstead, N.W. 3. B.A. (Cambridge Natural Science Tripos, Parts I and II). One year's research at Mount Vernon. (*Signed by*) W. J. Pope, Jocelyn Thorpe, Hamilton McCombie, W. H. Mills.

TOWLER, WILLIAM MILBURN, 28, Denton Ave., Roundhay, Leeds. British. Student. B.Sc. Hons. Chemistry, Leeds University. (*Signed by*) H. M. Dawson, P. K. Dutt, H. Holness.

TRAILL, DAVID, 58, Chalmers St., Dunfermline, Scottish. Research Student. B.Sc. (1st Cl. Hons. Chemistry, St. Andrews), 1923. Research in Organic Chemistry, 1923-1925. Macbeth and Traill, *T.*, 1925, 127, 892; and 1118. (*Signed by*) A. Killen Macbeth, Irvine Masson, James Craik.

TRICKER, ELVERA ANNIE, 319, Norwich Rd., Ipswich. British. Student of Chemistry at Bedford College. (*Signed by*) J. F. Spencer, H. Crompton, J. Stewart.

TURNER, DONALD MORRISON, 40-42, Lexington St., W. 1. British. Representative of Mead Johnson & Co., Food Specialists. M.Am.Chem.Soc. Ten years Asst. Analyst, Govt. Laboratory, Newfoundland. Desire to receive the publications of the Society and keep in touch with modern work. (*Signed by*) D. James Davies, G. S. W. Marlow, F. S. Aumonier.

TURNER, GEOFFREY, 85, Winchester Avenue, Leicester. English. Research Student, attending Loughborough College, Leics. B.Sc. (2nd Class Honours, London); Diploma of Loughborough College (Honours). (*Signed by*) A. Bramley, A. T. Eggington, G. Lawton.

TYLER, NORMAN LEOPOLD, 9, St. Paul's Gardens, Spennymoor, Co. Durham. British. Chief Chemist and Manager of Messrs. Intermediates and Explosives, Ltd., Dean and Chapter Colliery, Ferryhill, Co. Durham. City and Guilds and South Kensington Examinations, Inorganic and Organic. South Staffs. Scholarship Metallurgy., Iron and Steel. Secretary of N.E. Section of the British Association of Chemists. Fourteen years with Messrs. Chance and Hunt, Ltd., Oldbury and Wednesbury. Chemist in Charge of several plants for eight years. (*Signed by*) S. I. Levy, L. R. B. Pearce, W. A. S. Calder.

VERNON, HERBERT WARD, 245, Albert Rd., London, N. 22. British. Research Chemist. B.Sc. in Hons. Chemistry of Victoria University, Manchester. Held post as Research Chemist for last nine years. (*Signed by*) Percy C. C. Isherwood, B. H. Bowles, R. E. Brett.

WEBB, FREDERICK HENRY, "St. Malo," Jameson Road, Harpenden. British. Manufacturing Chemist and Optician. (1) Early Education at the Dunstable Grammar School. (2) Studied Analytical Chemistry under J. B. Hoblyn, B.Sc., F.I.C. (3) Studied Chemistry and Physics at the London School of Chemistry under Henry Wootton, B.Sc. (4) Passed the Qualifying Examination of the Pharmaceutical Society in 1910. (5) Passed the Qualifying Examination as a Fellow of the National Association of Opticians in 1923. Particularly interested in Analytical and Scientific work. (*Signed by*) Frank B. Arnold, J. J. Laws, Percy Barrs.

WILLIAMS, EWART HARROD, 31, Thornsbeach Road, Catford, S.E. 6. British. Chemist, Government Laboratory, Clement's Inn Passage, W.C. B.Sc. (Hons. Lond.), A.C.G.F.C., A.I.C. Research work at Finsbury Technical College with Prof. A. J. Hale, and at the Government Laboratory with Dr. J. J. Fox. I desire to keep in touch with modern developments in Pure and Applied Chemistry, through the Society's Journal, and by attending the Scientific Meetings of the Society. (*Signed by*) Robert Robertson, Geo. Stubbs, J. J. Fox, A. G. Francis.

WILLIAMS, GWYN, Cae Ffynnon, Llandudno Junction, North Wales. Welsh. Research Student in Chemistry at University College of North Wales, Bangor. 1924, B.Sc. (Wales) with 1st Class Hons. in Chemistry. 1924-5, Research Student at University College, Bangor. (*Signed by*) Kennedy Orton, F. G. Soper, H. B. Watson.

WILLIAMS, HUGH AMPHLETT, 249, Kennington Rd., S.E. 11. English. Student. Student of the Institute of Chemistry, desiring the use of the Library and the Periodicals. (*Signed by*) George A. Stokes, Ernest W. Wright, A. J. Hale, H. M. Atkinson.

WILLIAMS, ROBERT HARDING, 131, Anlaby Road, Hull. British. Chemist (Pharmaceutical), practising as a Chemist at above address. (Leeds University Matric.). Two years at Swansea Municipal College (3rd year Medical Student). M.P.S. (1907). One year Hull Technical College. Was 2 years as Chemist in Middlesbro' (Analytical), and have been in business at above address nearly 4 years. Have been doing analytical work for a number of years. (*Signed by*) Harry Thompson, Thos. A. Nightscales, Edward Chapman.

WILTSHIRE, JOHN LAURENCE, 36, Fordel Road, Catford, London, S.E. 6. English. Assistant Works Chemist to Messrs. Burt, Boulton, and Haywood, Coal Tar Distillers, London. B.Sc. London, 2nd Class Honours in Chemistry (1925). Three years' experience with consulting analyst (Mr. F. W. Harbord). Now occupied as above and in pure chemical research under Mr. E. de B. Barnett at the Sir John Cass Technical Institute, London. (*Signed by*) E. de Barry Barnett, Marcus A. Matthews, James W. Cook.

WOLFE, JOHN JAMES BENJAMIN, 24, Greyhound Road, Hammersmith, W. 6. English. Student (Research), East London College. (*Signed by*) J. R. Partington, Elwyn Roberts, D. C. Jones.

WRIGHT, GORDON MITCHELL, University Chemical Labs., Cambridge. British. Research Chemist. M.A. (Cantab.), B.Sc. (Glasgow). (*Signed by*) Hamilton McCombie, A. C. P. Lunn, Harold A. Scarborough.

WYATT, WILFRED FISHER, North Anston, Nr. Sheffield. British. Demonstrator in Chemistry, the University of Sheffield. B.Sc. Hons. Chemistry, 1923, Sheffield University; M.Sc., 1924, Sheffield University. (*Signed by*) W. P. Wynne, F. G. Tryhorn, G. M. Bennett, Arthur W. Chapman.

ZIMMERMANN, JOHN FREDERICK, 17, Stile Hall Gardens, Chiswick, W. 4. British. Research Chemist. Diploma of Engineer Chemist, Zurich Poly-

technicum. 2½ Years as Assistant to Dr. Tcherniac. (*Signed by*) J. Tcherniac, A. G. Bloxam, C. S. Gibson.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2).

CUTBERT, BERTRAM, c/o The British Australian Cotton Assocn., Oil Mills, Brisbane, Australia. British. Oil Mills Manager. 1906-1912, Analytical Chemist, The Hull Oil Manuf. Co., Ltd., Hull, Eng. 1912-1914, Research Chemist, The Hull Oil Manuf. Co., Ltd., Hull, Eng. 1914-1919, Research Chemist and Refinery Manager for the Hull Oil Manuf. Co., Ltd. 1920-1923, Assistant Works Manager and Soap Works Manager for the Hull Oil Manuf. Co., Ltd. 1923 to present time, Oil Mills Manager for the British Aust. Cotton Assocn., Ltd., Brisbane, Queensland, Australia. (*Signed by*) Geo. H. Appleyard, H. W. Potts.

MILLER, EDGAR CALVIN LE ROY, c/o Medical College of Virginia, Richmond, Va., U.S.A. English. Teacher in Medical College of Virginia. Professor of Biological Chemistry and Bacteriology. M.D. (University of Michigan). Secretary of the Virginia Academy of Science. Past secretary and past chairman of the Virginia Section of the American Chemical Society. (*Signed by*) F. P. Dunnington.

SIGOT, ALBERT LOUIS AUGUSTE, Institut de chimie, 2, Rue Goethe, Strasbourg. Français. Licencié és Sciences, préparateur à la Faculté des Sciences de l'Université de Strasbourg. Chargé des travaux pratiques de Chimie Physique. (*Signed by*) Louis Hackspill, Georges Baume.

## ADDITIONS TO THE LIBRARY.

### I. *Donations.*

ABDERHALDEN, EMIL. [Editor.] Handbuch der biologischen Arbeitsmethoden. Abt. I. Chemische Methoden, Teil 2, Heft i. Berlin 1925. pp. 456. M. 21. (*Recd.* 2/11/25.)

From the Publishers: Herren Urban & Schwarzenburg.

# PROCEEDINGS

## OF THE

# CHEMICAL SOCIETY.

Informal Lecture, Thursday, November 26th, 1925, at 6 p.m.,  
Dr. N. V. SIDGWICK, M.A., F.R.S., Vice-President, in the Chair.

The CHAIRMAN mentioned that this was the first of the Informal Lectures to be given by the Society, and then called upon Professor R. Robinson, D.Sc., F.R.S., to deliver his Lecture entitled: "Recent Research on the Structural Relationships of some Plant Products."

At the conclusion of the Lecture a Vote of Thanks to the Lecturer was proposed by Professor T. M. Lowry, seconded by Dr. R. H. Pichard, and carried with acclamation, Professor Robinson making due acknowledgment.

Ordinary Scientific Meeting, Thursday, December 3rd, 1925, at 8 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., LL.D., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of the following Fellows:

	Elected.	Died.
James Kerr Erskine .....	Dec. 5th, 1889.	April, 1925.
Robert Walter Oddy .....	May 15th, 1890.	Nov. 24th, 1925.
William Robert Lang .....	March 4th, 1897.	Nov. 20th, 1925.

Certificates were read for the first time in favour of:

Dattatraya Vishwanath Bal, Rothamsted Experimental Station, Harpenden.  
Bernard Meredith Brown, B.Sc., F.I.C., Hill Close, Croham Manor Road,  
S. Croydon.

Frederick Leslie Clark, 170, Barnsley Road, Sheffield.

Reginald Clifford Fawcett, B.Sc., The Cottage, Pentre, Wrexham.

Ko Ko Gyi, Agricultural College, Mandalay.

Tom Heap, B.Sc., Birch Mount, Church Road, New Mills, Stockport.

Stanley Barker Johnson, c/o Colombo Gas & Water Co., Ltd., Colombo,  
Ceylon.

Leonard George Jupp, B.Sc., A.R.C.S., 6, Chesham Road, Kemp Town,  
Brighton.

Horace Alfred Mayes, B.Sc., The Cottage, Sewage Works, Vicarage Lane,  
East Ham, E. 6.

Henry Geoffrey Ordish, B.A., Chilcombe, Milton Road, Harpenden.  
 Arnold Piukus, 238, Amhurst Road, Stoke Newington, N. 16.  
 Clifford Burrough Purves, B.Sc., Edenbank, Cupar.  
 Suresh Chandra Ray, P.O. Alambazar, Ray Villa, Calcutta.  
 Edna Clark Smith, B.Sc., 9, Gilston Road, S.W. 10.  
 Sidney David Sutton, 2, Glasshouse Street, W. 1.  
 Raymond Taylor, M.A., B.Sc., St. Brelades, Woodside Road, Parkstone.  
 Richard Victor Thomas, B.A., 17, Pretoria Road, Cambridge.  
 Henry Wilkins, B.Sc., 13, Kinfauns Road, Goodmayes.  
 Reginald Frank Wright, A.R.C.S., Fairhazel, Avondale Road, Hove.

Messrs. E. Horton and W. B. Saville were elected Scrutators, and a ballot for the election of Fellows was held. The following were subsequently declared elected as Fellows :

Robert Leslie Andrew.	Eric Bertram Evans, B.Sc.
Louis Baissac.	Elinor Katharine Ewbank, B.A.
William Francis Barker, Ph.D.	Elizabeth Monica Openshaw Farrow,
Ralph Basden.	M.A.
Frank Bell.	Oliver Free, B.A.
Arthur Neville Copnall Bennett, B.Sc.	William Marshall Freeman.
Harold Frederick Betts, B.Sc.	Eva Florence Gee.
John Cecil Bird, B.Sc., A.I.C.	James Walter Shanks Gemmell, B.Sc.
Lionel Christopher William Birkett,	Francis Reginald Glover.
B.Sc.	William Bouch O'Brien Goudielock.
James Boyd, F.I.C.	Felix John Theodore Grigg, M.Sc.,
Frank Symonds Bradhurst.	A.I.C.
Edward Britnell, B.Sc.	George Vincent Hall, B.Sc.
Reginald John Bromfield.	John Hall, M.Sc., A.I.C.
Francis Hereward Burstall, B.Sc.	William Rowan Hare.
Archer John William Butterfield.	Walter Healey.
John Hildred George Carlile, B.Sc.,	Thomas Henderson, M.C., M.A., B.Sc.
A.R.C.S.	Herbert Sim Hirst.
Leslie James Chalk, B.Sc.	Syed Husain, M.Sc.
Rama Charan, B.Sc., B.Sc.Tech.	Toru Iwadare.
John William Corran, B.Sc., Ph.D.,	David Christopher Mendis Jaye-
A.I.C.	wardene.
John Harold Cottier.	Gilbert Jessop, M.Sc., Ph.D.
Edward Mortimer Crowther, D.Sc.,	Charles Benjamin Johnson.
F.I.C.	Walter Idris Jones, B.Sc., Ph.D.
Bertram Cuthbert.	Henry Wilfrid Keenan.
Frank Edwin Dickinson.	Brian Charles Lavers Kemp, B.A.
Joseph Raymond Dolphin, B.Sc.	Charles King.
William Donovan, M.Sc.	Frederick Karl Victor Koch, B.Sc.,
John Stanley Dunn, M.A., Ph.D.,	A.R.C.S.
A.I.C.	Charles Dudley Langford, B.Sc.,
John Horsfall Dyde.	A.R.C.S.
George Malcolm Dyson, B.A., B.Sc.,	Banarsi Das Laroia, B.A., B.Sc.
Ph.D.	Henry Guinness de Laszlo, B.A.,
Alfred Eccles, B.Sc.	Ph.D.
Edwin Francis Edwards.	Bertram Grey Leatherbarrow.
John Moelwyn Edwards.	Sam Lenher, B.A.
George Albert Elliott, M.Sc.	John Joseph Lennon, M.Sc.

| Rose Rachel Sass, B.Sc.              | Gordon Mitchell Wright, M.A., B.Sc.   |
| Robert Saxon, B.Sc.                  | Wilfred Fisher Wyatt, M.Sc.           |
| Rupert Boswood Scammell, B.Sc.       | John Frederick Zimmermann.            |

The following papers were read :

- "On the Budde effect in bromine. Part I. The photoactive constituent in wet bromine." By B. LEWIS and E. K. RIDEAL.
- "On the Budde effect in bromine. Part II. The kinetics of the reaction and the light absorption of wet and dry bromine." By B. LEWIS and E. K. RIDEAL.
- "The influence of carbon rings on the velocity of reactions involving their side-chains. Part I. The hydrolysis of cyclic and open-chain malonic esters." By R. GANE and C. K. INGOLD.
- "The density of boric oxide glass and the suspected variation in the atomic weight of boron." By H. V. A. BRISCOE, P. L. ROBINSON, and G. E. STEPHENSON.

Ordinary Scientific Meeting, Thursday, December 17th, 1925, at 8 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., LL.D., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of the following Fellows :

	<i>Elected.</i>	<i>Died.</i>
George Frederick William Blackburn .....	May 15th, 1913.	Nov. 23rd.
Edmund Knecht .....	Dec. 1st, 1910.	Dec. 8th.
James Grant .....	Feb. 6th, 1890	Dec. 7th.

The PRESIDENT announced that :

1. A Special Lecture will be delivered by Professor J. Barcroft, F.R.S., entitled "Hæmoglobin" on Thursday, February 11th, 1926, at 8 p.m. The Lecture will be held in the Chemistry Theatre of the University College, Gower Street, W.C. 1, by the kind permission of the College Authorities.

2. British Chemical Abstracts "A," Pure Chemistry for 1926, printed on one side of the paper only, and gummed or ungummed, will be obtainable by Fellows at the price of £3 0s. 0d., post free. Application should be made to the Assistant Secretary, Mr. S. E. Carr, as soon as possible.

The following were formally admitted Fellows of the Chemical Society : Thomas M. Sharp, Arthur Moor, Cecil J. May, J. F. Zimmermann, F. Bell, C. D. Langford, and J. M. Edwards.

Certificates were read for the first time in favour of :

Edwin Melhuish Bailey, Almond Hill, Pumpherston, Midcalder.  
 Carl Howard Collie, B.A., New College, Oxford.  
 William Eric Downey, Ph.D., Imperial College of Science and Technology, S. Kensington, S.W. 7.  
 Andor Fodor, Ph.D., Hebrew University, Jerusalem.  
 Herbert Harris, B.Sc., Ph.D., A.R.C.S., 1, Royal York Villas, Clifton, Bristol.  
 Ralph Harry Klein, A.I.C., 11, Park Place Villas, Maida Hill, W. 2.  
 Montague Alexander Phillips, A.I.C., 31, Cator Street, S.E. 15.  
 Devasikhamani Sunderavelu Pillai, 37, Hill Street, Stoke-on-Trent.  
 Charles Aylmore Ray, B.A., 47, Somerford Grove, Tottenham, N. 17.  
 Ivy Winifred Elizabeth Rogers, 8, St. Lawrence Road, W. 10.  
 Ronald Stanley Russell, B.A., 47, Redington Road, Hampstead, N.W. 3.  
 Robert John Schaffer, B.A., B.Sc., 3, Hambalt Road, S.W. 4.  
 Charles Richard Noël Strouts, B.A., B.Sc., A.I.C., Westminster Bank, Kew Gardens, Surrey.  
 Frank Sherwood Taylor, M.A., B.Sc., 21, Shortlands Road, Shortlands, Kent.  
 Claude Stanley Watson-Will, Musgrave Road, Indooroopilly, Brisbane.  
 Idris Williams, B.A., 19, Silver Street, Cambridge.

The meeting was then adjourned, and the Informal Meeting declared open.

The Council has made the following Grants from the Research Fund :

	£	s.	d.
Preparation and investigation of rare earth carbides. N. L. Anflogoff ... ..	10	0	0
Preparation of phenanthrenes from stilbenes. J. N. Ashley ...	5	0	0
Investigation of certain binary and ternary systems. C. R. Bailey ... ..	5	0	0
Synthesis of genistein. W. Baker ... ..	15	0	0
Studies in the anthracene series ( <i>contd.</i> ). E. de B. Barnett ...	5	0	0
(a) Studies in aliphatic and cyclic sulphides ... ..			
(b) Reactivity of some quinoxaline bases. G. M. Bennett ...	5	0	0
Study of the mutual solubility relations of certain binary liquid systems. H. F. Betts ... ..	3	0	0
The dynamic isomerism of menthyl-cotarnine and of asymmetrical xanthidrols. B. C. Chatterjee ... ..	12	0	0
Thiocyano- and selenocyano-groups in the aromatic nucleus. F. Challenger ... ..	5	0	0
Preparation and study of certain polyhydroxy derivatives of diphenic acid. G. H. Christie ... ..	5	0	0
Synthesis of substituted tri- and tetra-methylene ring derivatives from compounds obtained by condensation of malonic ester with aldehydes. H. Clayton ... ..	5	0	0
Anthranyl ketones. J. W. Cook ... ..	5	0	0
Addition of bivalent carbon compounds to bodies of the diazo-methane class. K. Cooper ... ..	5	0	0
Stability of Schiff's bases. P. K. Dutt ... ..	5	0	0
Conversion of asymmetric bromo compounds into the corresponding sulphonic acids. E. B. Evans ... ..	5	0	0
Influence of the benzoyl group on the mobility of the three-carbon tautomeric system. M. D. Farrow ... ..	10	0	0
Studies in the catalytic activity of charcoal. J. B. Firth ...	10	0	0
Solubility relationships of alums and pseudo alums. S. Glasstone	3	0	0
Study of alkylene thiosulphates and of alkylene disulphonic acids. J. Goodspeed ... ..	5	0	0
Quasi-aromatic structure ( <i>contd.</i> ). F. R. Goss ... ..	5	0	0
Properties of conjugated compounds. A. T. Healey ... ..	6	0	0
Periodic chemical reactions. E. S. Hedges ... ..	15	0	0
Substitution in the aromatic nucleus. W. J. Hickinbottom ...	4	0	0
Photochemical combination of hydrogen with other gases. H. S. Hirst ... ..	7	0	0
(a) Synthetical experiments in the anthocyanidin series ...			
(b) Synthesis of indole derivatives. H. R. Ing ... ..	10	0	0
Conditions of equilibrium between alkali and alkaline earth halides and the alcohols ( <i>contd.</i> ). W. J. Jones ... ..	8	0	0
The chemistry of the three-carbon system. L. G. Jupp ...	8	0	0
(a) Reaction with ammonia of various unsaturated cyano esters			
(b) Methylation and ethylation products of various unsaturated cyano amides. (Miss) W. Kilroy ... ..	5	0	0
Lactone formation from the $\alpha\alpha'$ - $\beta\beta'$ -dibromo adipic acids. C. D. Langford ... ..	6	0	0
Properties of conjugated compounds. B. D. Laroia ... ..	6	0	0
Substituted diphenyl compounds. R. J. W. Le Fèvre ... ..	5	0	0

	£	s.	d.
Condition of formation and stability of carbon rings. J. J. Lennon ... ..	8	0	0
Action of nitric acid on unsaturated hydrocarbons. (Miss) P. V. McKie ... ..	10	0	0
Synthesis of (a) Degradation product of brucine, and (b) Harmaline and some of its derivatives. R. H. F. Manske ...	10	0	0
The effect of bulky groups on the mobility of the 3-carbon system. C. J. May ... ..	5	0	0
Researches on thallium compounds ( <i>contd.</i> ). R. C. Menzies ...	8	0	0
Three carbon tautomerism. B. T. Narayanan ... ..	6	0	0
Kinetics of the induction period of the hydrogen-chlorine reaction with ultra-violet light. R. G. W. Norrish ... ..	10	0	0
Action of ozone on dry iodine. H. W. Palmer ... ..	5	0	0
Nitration of substituted phthalides. J. N. Rây ... ..	7	0	0
Reactions between 1 : 3-diketones and amino and amido bodies. E. Roberts ... ..	5	0	0
Investigation of certain sesquiterpenes. J. M. Robertson ...	5	0	0
Properties of unsaturated cyclic ketones. J. Ross ... ..	5	0	0
The direct introduction of substituents into a mono-substituted diphenyl. H. A. Scarborough ... ..	5	0	0
Preparation and properties of various types of halogenated naphthalene derivatives. J. B. Shoesmith ... ..	10	0	0
Researches on sulphuryl chloride and chlorination. O. Silberrad	5	0	0
Influence of substituents on the stability of certain spiro and associated ring systems. S. S. G. Sircar ... ..	6	0	0
The basic salts, salts of mixed acids, and complex salts of metals of the 3rd and 8th periodic groups. J. D. Main Smith ...	12	0	0
Nitration studies of tertiary aromatic amines. J. M. Smith ...	5	0	0
Condensation reactions with certain $\beta$ -halogenated acids. M. G. Thomson ... ..	5	0	0
Introduction of the methylene-dioxy group and of similar groups into the aromatic nucleus. V. M. Trikojus ... ..	8	0	0
Conversion of substituted aromatic amines into quinolines. E. E. Turner ... ..	5	0	0
Effect of polar substituents on the Walden inversion among benzene derivatives. E. E. Turner ... ..	5	0	0
The chemistry of molybdenum. W. Wardlaw ... ..	5	0	0
Reaction of halogens with aliphatic acids, anhydrides, and allied substances. H. B. Watson ... ..	5	0	0
(a) Spatial structure of cycloparaffins ... ..			
(b) Constitution of the mono-chloro- and mono-bromo-methyl succinic acids. W. A. Wightman ... ..	5	0	0
(a) The migratory aptitudes of methoxy-phenyl groups ...			
(b) Experiments upon phthalophenone derivatives, etc. E. W. Wignall ... ..	10	0	0
Structural mobility in dihydromuconic systems. R. F. Wright .	5	0	0
Total ... ..	£388	0	0

List of papers, or abstracts thereof, received between November 20th and December 17th, 1925. (This list does not include titles of papers which have been read at an Ordinary Scientific Meeting, or which have appeared in the Journal.)

- "The mechanism of the formation of *o*- and *m*-hydroxybenzaldehydes from the nitration product of benzaldehyde." By H. H. HODGSON and H. G. BEARD.
- "The constitution of the normal monosaccharides. Part III. Rhamnose." By E. L. HIRST and A. K. MACBETH.
- "Resolution of *dl*-dicentrine." By R. D. HAWORTH, W. H. PERKIN, and J. RANKIN.
- "Synthetical experiments in the isoquinoline group. Part VI. A synthesis of derivatives of paraberine." By R. CAMPBELL, R. D. HAWORTH, and W. H. PERKIN.
- "The action of alkaline arsenites on some halogenated organic compounds." By I. E. BALABAN.
- "The equivalent conductivity of solutions of sodium hydroxide and the mobility of the hydroxyl ion." By H. R. RAIKES, A. F. YORKE, and F. K. EWART.
- "An investigation of the zirconium in Colorado pitchblende." By O. FREE.
- "Some products from the resins of *Xanthorrhoea*, *Hastilis*, *X. Arborea*, and *X. Reflexa*." By H. H. FINLAYSON.
- "The nitration of  $\beta$ -naphthoic acid and some new amino- and nitro-naphthoic acids." By H. A. HARRISON and F. A. ROYLE.
- "Preparation of *p*-bromophenylhydroxylamine by the emulsification process. A modification." By R. D. HAWORTH and A. LAPWORTH.
- "Optical activity and the polarity of substituent groups. Part III. Menthyl acetophenone-*o*-carboxylate." By H. G. RULE and J. SMITH.
- "The crystal structure of catechol." By W. A. CASPARI.
- "The chlorination and bromination of 4-aminodiphenyl." By H. A. SCARBOROUGH and W. A. WATERS.
- "Studies of dynamic isomerism. Part XXI. The velocity of mutarotation of glucose and of tetramethylglucose in aqueous alcohols." By E. M. RICHARDS and T. M. LOWBY.
- "Studies of dynamic isomerism. Part XXII. The velocity of mutarotation of glucose and of tetra-acetylglucose in aqueous acetone." By G. G. JONES and T. M. LOWBY.

- "Some unsymmetrically substituted dinitro and diamino derivatives in the stilbene and tolane series. Part I. The fission of hydrogen chloride from 3:4'-dinitrostilbene dichloride." By H. A. HARRISON and H. WOOD.
- "The mercuration of aromatic substances. Part II. Ortho-nitrotoluene." By S. COFFEY.
- "N-Alkylated amidines." By M. SEN and J. N. RAY.
- "The equilibrium between ethyl alcohol and the alkali and alkaline earth salts. Part I." By D. G. R. BONNELL and W. J. JONES.
- "The dissociation pressures of alcoholates. Part I." By D. G. R. BONNELL and W. J. JONES.
- "Ethyl hydrogen sulphate. Part II." By M. A. HAMID, K. SINGH, and H. B. DUNNICLIFF.
- "Heterogeneous equilibria between the sulphates and nitrates of sodium and potassium and their aqueous solutions. Part I. The ternary systems." By M. A. HAMID.
- "Heterogeneous equilibria between the sulphates and nitrates of sodium and potassium and their aqueous solutions. Part II. The quaternary system  $H_2O-Na_2SO_4-NaNO_3-K_2SO_4-KNO_3$ ." By M. A. HAMID.
- "A new reaction of certain diazosulphonates derived from  $\beta$ -naphthol-1-sulphonic acid. Part I. The preparation of phthalazine, phthalazone, and phthalimidine derivatives from 4'-nitrobenzene-2-naphthol-1-diazosulphonate." By F. M. ROWE, E. LEVIN, A. C. BURNS, J. S. H. DAVIES, and W. TEPPER.
- "Substituted dihydropentazines—a new series of cyclic nitrogen compounds." By F. D. CHATTAWAY and G. D. PARKES.
- "Dvi-manganese." By J. G. F. DRUCE and F. H. LORING.
- "Preparation, hydrolysis, and reduction of the fluoro-, chloro-, and bromo-benzyl bromides." By J. B. SHOESMITH and R. H. SLATER.
- "Absorption spectra of condensed nuclear hydrocarbons." By N. S. CAPPEE and J. K. MARSH.
- "The melting points of the normal saturated dibasic acids." By D. A. FAIRWEATHER.
- "Tautomerism in the thyroxin molecule." By C. S. HICKS.
- "The structure of the normal monosaccharides. Part IV. Glucose." By E. L. HIRST.
- "An investigation of the hydrated fluoride of zirconium and the preparation of a hydrofluozirconic acid." By E. B. R. PRIDEAUX and E. C. ROFER.
- "3:4- and 2:5-Dimethoxyphenylhydrazine." By W. H. PERKIN and L. RUBENSTEIN.

- "Condensations involving active methyl groups in heterocyclic bases." By J. E. HUMPHRIES.
- "The system ferrous oxide-phosphoric acid-water and some of its oxidation products." By S. R. CARTER and N. H. HARTSHORNE.
- "Absorption spectra and tautomerism. Part I. Keto-enol tautomerism." By R. A. MORTON and W. C. V. ROSNEY.
- "Absorption spectra and tautomerism. Part II." By R. A. MORTON and E. ROGERS.
- "Absorption spectra of mesityl oxide." By R. A. MORTON.
- "The decomposition of substituted carbamyl chlorides by hydroxy-compounds. Part II. The influence of the constitution of the hydroxy-compound." By T. W. PRICE.
- "Substitution in vicinal trisubstituted benzene derivatives. Part IV." By L. RUBENSTEIN.
- "The complex salts of  $\beta\beta'\beta''$ -triaminotriethylamine with nickel and palladium." By F. G. MANN and W. J. POPE.
- " $\gamma\gamma'\gamma''$ -Triaminotripropylamine and its complex compounds with nickel." By F. G. MANN and W. J. POPE.
- "Preparation and reduction of methyleneanthrone." By E. de B. BARNETT and M. A. MATTHEWS.
